The UK Government's [reporting system for COVID vaccine adverse reactions](#) from the Medicines and Healthcare products Regulatory Agency released their latest report today, April 29, 2021.

The report covers data collected from December 9, 2020, through April 21, 2021, for the three experimental COVID “vaccines” currently in use in the U.K. from Pfizer, AstraZeneca, and Moderna.

They report a total of **1,047 deaths** and 725,079 injuries recorded following the experimental COVID injections.

685 of the 1,047 deaths followed AstraZeneca COVID injections, and 573,650 of the 725,079 injuries followed AstraZeneca COVID injections.

Two countries, Norway and Denmark, have now completely halted injections of COVID shots by AstraZeneca, with the Norwegian Institute of Public Health stating that the AstraZeneca experimental shots are associated with a higher risk of injury and death than the COVID-19 virus.
