Theme: [Science and Medicine](#)

VAERS data released today by the Centers for Disease Control and Prevention included a total of 965,843 reports of adverse events from all age groups following COVID vaccines, including 20,244 deaths and 155,506 serious injuries between Dec. 14, 2020, and Dec. 10, 2021.

The Centers for Disease Control and Prevention today released new data showing a total of [965,843 reports of adverse events](#) following COVID vaccines were submitted between Dec. 14, 2020, and Dec. 10, 2021, to the Vaccine Adverse Event Reporting System (VAERS). VAERS is the primary government-funded system for reporting adverse vaccine reactions in the U.S.

The data included a total of [20,244 reports of deaths](#) — an increase of 358 over the previous week — and [155,506 reports of serious injuries](#), including deaths, during the same time period — up 4,560 compared with the previous week.

Excluding “[foreign reports](#)” to VAERS, [691,884 adverse events](#), including [9,295 deaths](#) and [59,767 serious injuries](#), were reported in the U.S. between Dec. 14, 2020, and Dec. 10, 2021.

[Foreign reports](#) are reports received by U.S. manufacturers from their foreign subsidiaries. Under U.S. Food and Drug Administration (FDA) regulations, if a manufacturer is notified of a foreign case report that describes an event that is both serious and does not appear on the product’s labeling, the manufacturer is required to submit the report to VAERS.

Of the 9,295 U.S. [deaths reported](#) as of Dec. 10, 21% occurred within 24 hours of vaccination, 26% occurred within 48 hours of vaccination and 61% occurred in people who experienced an [onset of symptoms](#) within 48 hours of being vaccinated.

In the U.S., 480 million COVID vaccine doses had been administered as of Dec. 10. This [includes](#) 279 million doses of Pfizer, 184 million doses of Moderna and 17 million doses of Johnson & Johnson (J&J).

From the 12/10/2021 release of VAERS data:

Found 965,843 cases where Vaccine Is COVID19

[Government Disclaimer on use of this data](#)

Table

Event Outcome	Count	Percent
Death	20,244	2.1%
Permanent Disability	20,270	2.1%
Office Visit	131,180	13.6%
Emergency Room	70	0.01%
Emergency Center/Room	100,000	11%
Hospitalized	105,890	11.0%
Hospitalized, Prolonged	280	0.03%
Recovered	288,211	29.8%
Birth Defect	120	0.02%
Life Threatening	22,662	2.3%
Not Serious	419,607	43.6%
TOTAL	↑ 1,147,273	↑ 118.76%

† Because some cases have multiple vaccinations and symptoms, a single case can account for multiple entries in this table. This is the reason why the Total Count is greater than 965,843 (the number of cases found), and the Total Percentage is greater than 100.

Every Friday, [VAERS](#) publishes vaccine injury reports received as of a specified date. Reports submitted to VAERS require further investigation before a causal relationship can be confirmed. Historically, VAERS has been shown to report only [1% of actual vaccine adverse events](#).

U.S. VAERS data from Dec. 14, 2020, to Dec. 10, 2021, for 5- to 11-year-olds show:

- 4,181 [adverse events](#), including [80 rated as serious](#) and 2 [reported deaths](#). One death occurred in an 11-year-old girl from Georgia vaccinated Sept. 14, prior to the authorization of Pfizer’s COVID vaccine in the 5 to 11 age group.

The second death (VAERS I.D. [1890705](#)) occurred in a 5-year-old girl who died four days after her first Pfizer shot.

U.S. VAERS data from Dec. 14, 2020, to Dec. 10, 2021, for 12- to 17-year-olds show:

- 24,893 [adverse events](#), including [1,488 rated as serious](#) and [33 reported deaths](#).

The most recent deaths involve a 13-year-old girl from Texas (VAERS I.D. [1913198](#)) who died 31 days after receiving her COVID vaccine. According to her VAERS report, the girl received her first dose of Pfizer on Aug. 1.

Two weeks later, she complained of vague upper back pain and was diagnosed with a [rare](#)

[soft tissue cancer](#) located on her heart despite having no previous medical history. Parents requested a VAERS report be filed in case her cancer was related to the vaccine. Her cancer and heart condition rapidly and progressively worsened and she died Dec 1.

- [61 reports](#) of anaphylaxis among 12- to 17-year-olds where the reaction was life-threatening, required treatment or resulted in death — with 96% of cases attributed to [Pfizer's vaccine](#).
- [571 reports](#) of myocarditis and pericarditis (heart inflammation) with [561 cases](#) attributed to Pfizer's vaccine.
- [143 reports](#) of blood clotting disorders, with all cases attributed to Pfizer.

U.S. VAERS data from Dec. 14, 2020, to Dec. 10, 2021, for all age groups combined, show:

- 19% of deaths were related to cardiac disorders.
- 54% of those who died were male, 42% were female and the remaining death reports did not include the gender of the deceased.
- The [average age](#) of death was 72.7.
- As of Dec. 10, [4,584 pregnant women](#) reported adverse events related to COVID vaccines, including 1,446 reports of [miscarriage or premature birth](#).
- Of the [3,285 cases of Bell's Palsy](#) reported, 51% were attributed to [Pfizer](#) vaccinations, 41% to [Moderna](#) and 8% to [J&J](#).
- 791 reports of [Guillain-Barré syndrome](#) (GBS), with 42% of cases [attributed to Pfizer](#), 29% to [Moderna](#) and 27% to [J&J](#).
- [2,206 reports](#) of anaphylaxis where the reaction was life-threatening, required treatment or resulted in death.
- [11,680 reports](#) of blood clotting disorders in the U.S. Of those, [5,198 reports](#) were attributed to Pfizer, [4,159 reports](#) to Moderna and [2,275 reports](#) to J&J.
- [3,405 cases](#) of myocarditis and pericarditis with [2,118 cases](#) attributed to Pfizer, [1,137 cases](#) to Moderna and [140 cases](#) to J&J's COVID vaccine.

CDC endorses Pfizer, Moderna vaccines over J&J

An advisory panel to the CDC on Thursday [voted](#) 15 - 0 to "[preferentially recommend](#)" mRNA COVID vaccines Pfizer and Moderna over the J&J shot for adults 18 years and older.

The recommendation came after the agency's advisory panel [said](#) the rate of rare blood-clotting disorders following the J&J vaccine was higher than expected.

The CDC [signed off](#) on the panel's updated guidance late Thursday.

The panel effectively discouraged vaccine providers and adults from using J&J's shot but stopped short of recommending the vaccine be pulled from the market. The interim recommendation applies to J&J's primary series vaccine dose and the booster dose.

CDC officials acknowledged 54 cases of [thrombosis with thrombocytopenia syndrome](#) (TTS) among J&J recipients, including nine deaths.

The CDC's COVID-19 Vaccine Task Force [excluded](#) "reports where [the] only thrombosis is [ischemic stroke](#) or myocardial infarction," which significantly reduced the number of cases involving blood-clotting disorders.

16,000 physicians and scientists say kids shouldn't get COVID vaccines

COVID vaccines are “irreversible and potentially permanently damaging,” said Dr. Robert Malone, [in a statement](#) explaining why 16,000 physicians and medical scientists around the world signed a declaration publicly declaring healthy children should not be vaccinated against COVID.

Malone said the viral gene injected into children's cells forces the body to make toxic [spike proteins](#) that could cause irreparable damage to critical organs. The novel technology used by the vaccines has not been adequately tested, Malone said.

Malone said there is no benefit for children to be vaccinated against the [small risks](#) of a virus, given the COVID injuries parents, or their children, may have to live with for the rest of their lives.

Doctor says ‘many lives are being destroyed by government’s failure to recognize natural immunity

[Dr. Marty Makary](#), a public health researcher at Johns Hopkins Bloomberg School of Public Health, on Tuesday, [accused government officials](#) of practicing “modern-day McCarthyism” against anyone who suggests young healthy people, especially those who recovered from COVID, don't need booster shots.

Makary told members of the House Select Committee on the Coronavirus Crisis some COVID policies have become “too extreme, too rigid and are no longer driven by clinical data.”

Makary criticized the CDC's rush to push boosters for 16- and 17-year-olds based on lab experiments suggesting boosters raise antibody levels against Omicron.

He reminded committee members that, despite a combined annual budget of about \$58 billion, neither the CDC nor the National Institutes of Health have produced a credible study on natural immunity to COVID.

Studies show Pfizer vaccine less effective against Omicron

As [The Defender reported](#) on Dec. 14, three studies released within days of each other showed the PfizerBioNTech COVID vaccine is less effective against the [Omicron](#) variant.

According to a [preprint study](#) by researchers at the UK's University of Oxford in England, there's “a substantial fall in neutralization” of antibodies in the fully vaccinated “with evidence of some recipients failing to neutralize at all.”

According to the study, [breakthrough infections](#) in those previously infected or double-vaccinated individuals could increase, although there is currently no evidence of increased potential to cause severe disease, hospitalization or death.

[Children's Health Defense](#) asks anyone who has experienced an adverse reaction, to any vaccine, to file a report following [these three steps](#).
