As reports from individuals like Chieko Shiina, a supporter of the Fukushima Collaborative Clinic talk about exploding rates of thyroid cancer in children, as well as an epidemic of leukemia, heart attacks, and other health problems, the Abe-led government and US continue to sweep the fall out of the Fukushima disaster under the rug.

Cancer rates have exploded at an increase of almost 6000% in areas near the reactor meltdown. Aside from people-on-the-street interviews that a rare media outlet like “Hodo station” will report on, mainstream media stays completely silent. One Japanese resident, [Carol Hisasue, laments](#) that as the incident has disappeared from the media, it has also disappeared from people’s consciousness.

So why does Fukushima continue to be a see no evil, hear no evil event? You can watch an over hour-long report that goes into detail, but to sum it up, people can’t even turn on their gas-stoves near Fukushima because “it would be like burning radioactive fuel in their kitchens.” The contamination levels are too ridiculous to even comprehend.

No matter if the accident was caused by a [purposeful nuclear attack](#), an act of [weather warfare](#) (as some conspiracy analysts have suggested), or by the sheer greed of the nuclear industry who built it, it is essentially a massive nuclear weapon on fault lines. The Japanese government and TEPCO are guilty of crimes against humanity, and their neglect is compounded by a complete disregard, not only for human life, but for all life upon this planet.

The US is also responsible. After the spotlight was put on [failing plants](#) across the United States that continue to leak radiation into our air, water, and soil every day, the multi-billion dollar, US taxpayer-subsidized contracts of the nuclear industry came into question. And you can be sure any real inquiry into the infrastructure of our nuclear plants was hushed up as quickly as concerns were raised.

The World Health Organization [once warned](#) that cancer rates could soar 50% in less than 20 years – but we’ve already surpassed that estimate, which once seemed catastrophic, exponentially.

So tell me – why are we in such a hurry to forget Fukushima, and why are plans being drawn up to [build more nuclear reactors](#) in the US using taxpayer monies?
