The European database of suspected drug reaction reports is [EudraVigilance](#), which also tracks reports of injuries and deaths following the experimental COVID-19 “vaccines.”

Here is what [EudraVigilance](#) states about their database:

This website was launched by the [European Medicines Agency](#) in 2012 to provide public access to reports of suspected side effects (also known as suspected adverse drug reactions). These reports are submitted electronically to [EudraVigilance](#) by national medicines regulatory authorities and by pharmaceutical companies that hold marketing authorisations (licences) for the medicines.

EudraVigilance is a system designed for collecting reports of suspected side effects. These reports are used for evaluating the benefits and risks of medicines during their development and monitoring their safety following their authorisation in the European Economic Area (EEA). EudraVigilance has been in use since December 2001.

This website was launched to comply with the [EudraVigilance Access Policy](#), which was developed to improve public health by supporting the monitoring of the safety of medicines and to increase transparency for stakeholders, including the general public.

The [Management Board of the European Medicines Agency](#) first approved the EudraVigilance Access Policy in December 2010. A revision was adopted by the Board in December 2015 based on the 2010 pharmacovigilance legislation. The policy aims to provide stakeholders such as national medicines regulatory authorities in the EEA, the European Commission, healthcare professionals, patients and consumers, as well as the pharmaceutical industry and research organisations, with access to reports on suspected side effects.

Transparency is a key guiding principle of the Agency, and is pivotal to building trust and confidence in the regulatory process. By increasing transparency, the Agency is better able to address the growing need among stakeholders, including the general public, for access to information. ([Source](#).)

EudraVigilance - European database of suspected adverse drug reaction reports

The European Medicines Agency publishes these data so that its stakeholders, including the general public, can access information that European regulatory authorities use to review the safety of a medicine or active substance. **Transparency** is a key guiding principle of the Agency.

EudraVigilance

Their report through April 24, 2021 lists 8,430 deaths and 354,177 injuries following injections of four experimental COVID-19 shots:

- [COVID-19 MRNA VACCINE MODERNA \(CX-024414\)](#)
- [COVID-19 MRNA VACCINE PFIZER-BIONTECH](#)
- [COVID-19 VACCINE ASTRAZENECA \(CHADOX1 NCOV-19\)](#)
- [COVID-19 VACCINE JANSSEN \(AD26.COV2.S\)](#)

A *Health Impact News* subscriber in Europe ran the reports for each of the four COVID-19 shots we are including here. This subscriber has volunteered to do this, and it is a lot of work to tabulate each reaction with injuries and fatalities, since there is no place on the [EudraVigilance](#) system we have found that tabulates all the results.

Since we have started publishing this, others from Europe have also calculated the numbers and confirmed the totals.

Here is the summary data through April 24, 2021.

This is public information funded by the European Medicines Agency (EMA), and anyone can use the [EudraVigilance](#) system and verify this data.

[Denmark](#) and [Norway](#) have completely suspended use of the AstraZeneca experimental COVID-19 shots.

A statement issued by the [Norwegian Institute of Public Health](#) stated that the AstraZeneca COVID “vaccine” is more dangerous than COVID itself, especially for young people.

The EMA continues to recommend it. They did, however, add a safety warning to the J&J shots, due to fatal blood clots. ([Source.](#))
