[New Year Donation Drive: Global Research Is Committed to the "Unspoken Truth"](#)

Each year 25,000 Australians experience a cardiac arrest.

"90% of those 25,000 WILL NOT SURVIVE". (Dr.Elizabeth Paratz - Baker Heart & Diabetes Institute")

"If you're young it's more likely that NO ANSWERS WILL BE FOUND."

Australian Heart Foundation Media Release [Dec. 22, 2023](#):

Australian scientists will build the **world's largest-ever registry of sudden cardiac arrest deaths** in a major bid to solve one of the most elusive and frightening mysteries of cardiovascular disease.

Starting with Victoria, the work, supported by the Heart Foundation and led by Baker Heart and Diabetes Institute's Dr Elizabeth Paratz, will combine and examine cardiac arrest data from two large and existing databases.

The new super-registry, named CODEX-SD which links ambulance and forensic data, **will for the first time give researchers their closest look yet at what causes sudden cardiac arrests** and what might be done to stop them.

The database will provide a **single place to record the nation's data on cardiac arrests to also help researchers to examine rare conditions**, identify trends and better understand the cardiac experiences of under-represented populations.

Dr Paratz said CODEX-SD will help researchers pinpoint what further work needs to be done to unlock the **genetic mysteries that have made sudden cardiac arrest a leading cause of death for people aged 50 and under in Australia.**

A cardiac arrest occurs when a person's heart suddenly stops pumping blood effectively around the body and can strike anywhere, anytime, and is often fatal without immediate and appropriate intervention from bystanders.

Each year in Australia, 25,000 people experience out-of-hospital cardiac arrests, and in about 30 to 40 per cent of cases, doctors cannot explain what caused it.

"There's very few other conditions like that, **where at the end of extensive investigations we go back to the family and say there's no clear reason why this tragic event has happened,**" Dr Paratz said.

"This lack of closure makes it incredibly difficult for families, but also with a lack of knowing who else might be at risk in the family adds another layer of distress.

"90 percent of people who suffer a sudden cardiac arrest die, so if we can make inroads on that statistic – and we need to do so – one benefit, and the most important one, is that we have a better chance of keeping families together," she said.

Bryan Maris; Super Fit, Super Healthy and an A-grade Cyclist

The registry has the full support of Jessica Maris, who tragically lost her husband Bryan at age 31 to sudden cardiac arrest.

Bryan was super fit, super healthy and was an A-grade cyclist.

Early one January morning, Jessica was feeding their three-month old daughter Avie Rose when she heard a noise in the bedroom.

"It sounded like a cough from Bryan, I called out to Bryan but there was no answer, so when I finished feeding Avie, **I went into our bedroom and Bryan was in bed; with his arms up beside his head, at a strangle angle,**" Mrs Maris said.

"I nudged Bryan, but he didn't respond. He wasn't moving and his lips were slightly blue, so I called an ambulance."

Unfortunately Bryan was unable to be revived.

The Maris family has since been told it was likely that Bryan had **Brugada syndrome;** a condition that can cause fast, irregular heartbeats which can lead to fainting or, in serious cases, a cardiac arrest.

Bryan Maris died in his sleep on [Jan.4, 2015.](#)

My Take...

This is a very well funded and extensive effort to normalize COVID-19 mRNA Vaccine Cardiac Injuries and Sudden Cardiac deaths.

Once they have their excuses ready – they will have the mainstream medical establishment

structure (the World's largest database, cardiac experts) sell the lies to the victims' families.

Who is going to question the World's largest sudden cardiac death database and its experts?

Notice that in the above video as well as media release, they don't use a recent sudden cardiac death case.

Instead, they use the case of Bryan Maris (a professional cyclist) from 2015.

Why are they avoiding using a recent case? Because everyone would ask if that person was COVID-19 Vaccinated.

Bryan Maris was an A grade road cyclist. He died from a [sudden cardiac arrest six years ago](#). Pic: Supplied. .

Since this project is part of a pre-meditated attempt to cover up COVID-19 mRNA Vaccine Induced Sudden Cardiac Deaths, which itself is a crime, everyone involved with this project should face criminal charges and a very lengthy prison time.

The Worldwide Corona Crisis, Global Coup d'Etat Against Humanity

by **Michel Chossudovsky**

Michel Chossudovsky reviews in detail how this insidious project “destroys people’s lives”. He provides a comprehensive analysis of everything you need to know about the “pandemic” — from the medical dimensions to the economic and social repercussions, political underpinnings, and mental and psychological impacts.

“My objective as an author is to inform people worldwide and refute the official narrative which has been used as a justification to destabilize the economic and social fabric of entire countries, followed by the imposition of the “deadly” COVID-19 “vaccine”. This crisis affects humanity in its entirety: almost 8 billion people. We stand in solidarity with our fellow human beings and our children worldwide. Truth is a powerful instrument.”

Reviews

*This is an in-depth resource of great interest if it is the wider perspective you are motivated to understand a little better, the author is very knowledgeable about geopolitics and this comes out in the way Covid is contextualized. —**Dr. Mike Yeadon***

*In this war against humanity in which we find ourselves, in this singular, irregular and massive assault against liberty and the goodness of people, Chossudovsky’s book is a rock upon which to sustain our fight. —**Dr. Emanuel Garcia***

*In fifteen concise science-based chapters, Michel traces the false covid pandemic, explaining how a PCR test, producing up to 97% proven false positives, combined with a relentless 24/7 fear campaign, was able to create a worldwide panic-laden “plandemic”; that this plandemic would never have been possible without the infamous DNA-modifying Polymerase Chain Reaction test – which to this day is being pushed on a majority of innocent people who have no clue. His conclusions are evidenced by renown scientists. —**Peter Koenig***

*Professor Chossudovsky exposes the truth that “there is no causal relationship between the virus and economic variables.” In other words, it was not COVID-19 but, rather, the deliberate implementation of the illogical, scientifically baseless lockdowns that caused the shutdown of the global economy. —**David Skripac***

A reading of Chossudovsky’s book provides a comprehensive lesson in how there is a global

coup d'état under way called "The Great Reset" that if not resisted and defeated by freedom loving people everywhere will result in a dystopian future not yet imagined. Pass on this free gift from Professor Chossudovsky before it's too late. You will not find so much valuable information and analysis in one place. -Edward Curtin
