Duluth Reader

Region: [USA](#)

Theme: [Media Disinformation](#), [Science and Medicine](#)

The epidemic of chronic disorders among US children, now reported to represent well over 1/3 of fully-vaccinated children in America is likely iatrogenic (ie, physician-caused, prescription drug-induced, vaccine-induced, medical/surgical treatment-caused).

But the corporate medical and pharmaceutical industries both go through all sorts of contortions to deny responsibility for the epidemic, even to the point of lying, black-listing whistleblowers, publishing fraudulent journal articles, smearing the tellers of inconvenient truths, refusing to publish certain authors that have disproved certain doctrinal medical beliefs, etc.

Corporate medicine and Big Pharma have even stooped so low as to regularly hire pestering trolls that try to create doubt (a la Big Tobacco) and falsely debunk unwelcome truths that threaten the profits or reputations of the various Big Businesses associated with Big Medicine.

The Duluth, Minnesota, USA area is somewhat unique among most communities in that it has a totally independent alternative weekly newspaper - the Duluth Reader - that has allowed a number of columnists to publish articles that would never have been published in any of the region's corporate-controlled newspapers or corporate-controlled television/radio outlets (including PBS, NPR, MPR, WPR).

The following article was written by a physician acquaintance of mine, pediatrician Ken Stoller, whom I met years ago at one of the annual conferences of the International Center for the Study of Psychiatry and Psychology. We were members of that watchdog group because we were both suspicious of the pro-psych drug agendas of Big Pharma and Big Psychiatry.

Ken was also once a board-certified member in good standing of the American Academy of Pediatrics (AAP) until that lobbying and trade association group began denying the provably strong connections between the AAP's and CDC's over-vaccination agendas (that recommended the intramuscular injections of cocktails of vaccines containing dangerous amounts of the neurotoxic ingredients mercury, aluminum and/or live viruses, starting with a baby's first aluminum-containing Hepatitis B shot in the newborn nursery at day one (a shot that contained mercury until 2001). Recall that even trace amounts of toxic metals can be very poisonous when injected into muscle tissue.

So I was happy to run across the following YouTube video that was produced by Ken in 2011, probably prior to the newest information about the serious autoimmunity-inducing properties that aluminum adjuvants have on lab animals and humans. (Please google articles by RK Gherardi (Macrophagic Myofasciitis), Yehuda Shoenfeld (Autoimmune Syndrome Induced by Adjuvants [ASIA]), Chris Shaw, Lucija Tomljenovic, Suzanne Humphries, Sherri Tenpenny, and many other world-class experts on immunology and the serious dangers of the AAP's infant vaccination schedule.)

The transcript of the video is printed further below, but I preface the article with a number of pertinent quotes and recommendations for further research for inquisitive and open-minded readers.

"The collective evidence strongly suggests that Thimerosal exposure is associated with adverse neurodevelopmental outcomes." - Jose G Dorea - Jan 2017 (Thimerosal is the neurotoxic mercury preservative that was in many infant, childhood and adult vaccines during the era of the explosive growth in autism spectrum disorders prior to the year 2000, when the AAP pleaded with Big Pharma to stop using Thimerosal in their vaccines because their pediatricians knew it was causing autism.)

*"The majority of studies that authorities point to as proof that vaccines do not cause autism have been published in a journal called Pediatrics, the official journal of the AAP. As we know, the AAP is a trade union for pediatricians (which derives a majority of its outside contributions - estimated at more than \$25 million per year - from the pharmaceutical companies that make vaccines). The pediatricians that the AAP represents derive the majority of their annual revenues from the administration of vaccines to their pediatric patients" — **J.B. Handley***

*"The most lucrative areas of medicine are the most corrupted by financial (and academic) conflicts of interest. So-called 'authoritative' sources of medical information are thoroughly corrupted not only by pharmaceutical industry manipulation but also by government officials and financially conflicted academic gatekeepers of medical science, 'expert' panels, medical journal editors and the largely corrupted vaccine information base." - **Vera Sharav, MD***

*"Public trust in professed authoritative sources of information about vaccine safety has evaporated because the 'authoritative' government and many non-government organizations have consistently misrepresented the vaccine safety data." - **Vera Sharav, MD***

*"It should be of concern that the effect of routine vaccinations on all-cause mortality was not tested in randomized trials. All currently available evidence suggests that DTP vaccine may kill more children (from other causes) than it saves from diphtheria, tetanus or pertussis." — **Dr. Peter Aaby***

*"The really sad thing is the number of doctors I've spoken to who say to me, 'Del, I know that vaccines are causing autism, but I won't say it on camera because the pharmaceutical industry will destroy my career just like they did to Andy Wakefield.'" — **Del Bigtree**, Producer of "Vaxxed: From Cover-up to Catastrophe"*

"Physician-editors of medical journals (who often receive money from Big Pharma

corporations) make decisions about which research manuscripts to publish, and thus play a major role in shaping medical knowledge and practice...Beyond deciding what gets published in medical journals (thereby shaping published research and widespread clinical practice), journal editors also decide who the peer reviewers are, which ones to use for a particular article, which articles are prioritized within a journal issue, and also determine the need for additional editorials or commentary, which might be pro or con the article's conclusions." — **Virginia Wong**

"Mercury at one month of age is not the same as mercury at three months, at 12 months, prenatal mercury, later mercury. There is a whole range of plausible outcomes from mercury." When asked about the risk of aluminum, Verstraeten stated: "the results (of toxicity from aluminum adjuvants) were almost identical to ethylmercury because the amount of aluminum goes along almost exactly with the mercury." — **Dr Tom Verstraeten**, senior CDC scientist

"The full extent of the Gardasil scandal needs to be assessed: everyone knew when this vaccine was released on the American market that it would prove to be worthless. Diane Harper, a major opinion leader in the United States, was one of the first to blow the whistle, pointing out the fraud and scam of it all. I predict that Gardasil will become the greatest medical scandal of all time because at some point in time, the evidence will add up to prove that this vaccine, technical and scientific feat that it may be, has absolutely no effect on cervical cancer and that all the very many adverse effects which destroy lives and even kill, serve no other purpose than to generate profit for the manufacturers. Gardasil is useless and costs a fortune! In addition, decision-makers at all levels are aware of it! Cases of Guillain-Barré syndrome, paralysis of the lower limbs, vaccine-induced MS and vaccine-induced encephalitis can be found, whatever the vaccine." -- **Dr Bernard Dalbergue** (former Merck employee)

"The autism epidemic is real, and excessive vaccinations are the cause." — **Dr Bernie Rimland**

"Completely unvaccinated children have less chronic disease and a lower risk of autism than vaccinated children." — **J. B. Handley, Jr.**

"...our current results are consistent with the existing evidence on the toxicology and pharmacokinetics of Aluminum adjuvants which altogether strongly implicate these compounds as contributors to the rising prevalence of neurobehavioral disorders in children. Given that autism has devastating consequences in a life of a child, and that currently in the developed world over 1% of children suffer from some form of ASD, it would seem wise to make efforts towards reducing infant exposure to aluminum from vaccines." — **C A Shaw**, PhD

"There is a serious problem with vaccine safety. Vaccine aluminum adjuvant has adverse neurological effects, at dosages that are recommended by the US CDC. Vaccine critics are supported by the science. Parents refusing to vaccinate according to the recommended CDC schedule are supported by the science. Use aluminum-containing vaccines with great caution, or not at all." — **Chris Shaw**, PhD

"Aluminum is an experimentally demonstrated neurotoxin and the most commonly used vaccine adjuvant...research clearly shows that aluminum adjuvants have a potential to

induce serious immunological disorders in humans. In particular, aluminum in adjuvant form carries a risk for autoimmunity, long-term brain inflammation and associated neurological complications and may thus have profound and widespread adverse health consequences.”
— (From Tomljenovic and Shaw’s journal article “Aluminum Vaccine Adjuvants: Are They Safe?”.)

To be enlightened about the dangers of America’s over-vaccination mandates, please click on the VAXXED YouTube channel [here](#), and watch the documentary as well as some of the dramatic testimonials of vaccine-injured children.

[Vaccines, Autism, Vaccines, Mercury and the Culpability of the American Academy of Pediatrics](#)

By **Kenneth P. Stoller, MD**

(The following is the transcript of Dr Stoller’s powerful video, which can be viewed below.)

Autism is a behavioral or psychiatric diagnosis with symptoms that include lack of eye contact, an inability to speak or poor social interactions. Unfortunately, the real problem with the vast majority of children diagnosed with Autism is that they were poisoned beyond what their bodies could process at a critical point in their development. For some, the poisoning came from pesticides or volatile organic compounds, but for most it was a soup of toxins and immune system disruptors found in vaccines, including the most deadly non-radioactive element on earth, mercury.

Instead of identifying the root cause of this growing epidemic of neurologically impaired children and then sounding a call to arms, the American Academy of Pediatrics has allowed the myth of better diagnosing as the reason that there is an explosion of Autism. During the Center for Disease Control and Prevention’s Simpsonwood meeting in the year 2000, it was revealed to the American Academy of Pediatrics and all of the pharmaceutical companies that the mercury in the preservative Thimerosal was causing speech delays and learning disabilities in children. Unfortunately, this information was not shared with the public.

The American Academy of Pediatrics knew the bad news about mercury in vaccines was going to become public, so in 1999 they pledged to have Thimerosal eliminated from vaccines. However, ten years after making the pledge to remove mercury from vaccines the only thing the AAP ever did was join in the protest against a fictitious TV show - Eli Stone -

because it was critical of mercury being in vaccines.

Mercury, which is the second most toxic substance to man and 500 times more toxic than lead, is still present in most of the flu vaccine, in the preservative Thimerosal. This is a deadly form of organic mercury called ethyl mercury, which is rapidly absorbed into human cells and the brain.

Vaccines with “trace” amounts of Thimerosal are supposed to contain less than 1 microgram of mercury. Another way of saying 1 microgram is 2000 parts per billion. Now, 1 microgram, or 2000 parts per billion, may not sound like a lot, until you understand just how poisonous mercury really is:

2 ppb of mercury is the U.S. Environmental Protection Agency’s limit for drinking water.

20 ppb of mercury will destroy membrane structure of nerves.

If there is 200 ppb of mercury in a liquid, the EPA classifies that as hazardous waste.

In the United States from 1991 to 2001, the multi-dose, Hepatitis B vaccines administered at birth contained 25,000 ppb of mercury.

And there were 50,000 ppb of mercury in the multi-dose DTP and Haemophilus B vaccines, administered 8 times in the 1990’s.

These toxic multi-dose vials continue to be used with the approval and encouragement of the World Health Organization throughout the world.

For years the Infectious Disease division at the CDC said the reason for the dramatic increase in autism is due to “better diagnosing” and “greater awareness.” They have encouraged those like the AAP to create uncertainty by publishing articles that were less than truthful. Instead of being the advocates for children that they pretend to be, the AAP shamefully plays along, perhaps encouraged by vaccine manufacturers who significantly contribute to the AAP’s yearly budget.

I have discussed mercury as being the chief culprit in the poisoning of a generation of children, most of whom are still under the age of 18, but the contents of vaccines are a toxic soup of ingredients that have never been safety tested appropriately. Vaccines are designed to upset the immune system, and ingredients like polysorbate 80, which is known to cause anaphylactic reactions in some people, as well as aluminum, MSG, DNA of aborted human embryos, and viral contaminants we know to cause cancer in animals, are all part of what is injected into infants, babies and children. For example, the mandatory immunization schedule will cause a two month-old child to receive 49 times the FDA safety limit of aluminum.

Many children can handle this toxic soup of ingredients and get through it unscathed. Others may wind up with allergies, ear infections, weakened immune systems or autoimmune conditions. Yet others can’t handle the toxins at all, and instead develop neuro-immune problems that forever impair their nervous systems. These children develop a brain disease called encephalopathy.

If we now have better diagnosis of Autism, then we should see a higher incidence of Autism in older adults. However, there are no studies that have found these previously undiagnosed or misdiagnosed autistic individuals among older Americans. They simply don’t exist, except in very small numbers, and that is because older Americans were not given the great numbers of vaccines that the children of today are being given.

A genetic epidemic cannot exist and therefore the increase of autism has been linked to the increase in an environmental exposure. This is now accepted as the probable cause, so the next logical thing to do is to trace all toxic exposures to their source.

We live in a world ruled by corporate interests and agendas that are not in the best interests of the citizens on this planet.

The federal government has never tested the type of mercury used in vaccines for toxicity. This is an unconscionable oversight failure at best, and at worse it is an example that we have left consensus reality to be created by liars, thieves, cheats, killers, and the junk scientists they employ

How it came to pass that the AAP joined these rogues and became an active participant in this skullduggery is beyond reason, and even beyond greed. They have remained silent as mercury-laden vaccine continues to be exported and used in all third world and second world countries.

We have tolerated the junk science that has covered up the true cause of this epidemic at a considerable cost to the integrity of science, the public, and our very way of life in this country. It is time to bring our collective heads out of the sand about the autism epidemic or we will make it possible for the destruction of a great many.

A question to ask is this: why haven't pediatricians come forward to demand the end of the use of Thimerosal once and for all, and to advocate for the treatment of these children before it is too late for them to regain functional lives. There is effective treatment for children with autism, and for many of them, if they are treated early enough there is great hope for partial or even full recovery.

Why aren't pediatricians at the front of the line protesting the amounts of mercury allowed to come out of coal-fired power plants? Why aren't they leading the charge to stop the use of mercury amalgam dental fillings that are placed in the mouths of young children and pregnant women?

The very federal agencies that should have been sounding the alarm about environmental pollution creating future generations of mentally disabled citizens did less than remain silent because they have become the arms of the very corporations that profit from selling and distributing poison. When you look at who sits on the FDA's Scientific Advisory Boards, it becomes obvious that the FDA has become a trade arm of Big Pharma. The conflicts of interest are so glaring that every American should question why this has happened.

Nevertheless, the handwriting is on the wall because the US government has been quietly settling vaccine brain damage cases in the Court of Federal Claims. The recent PACE Environmental Law Review has determined that many of these brain-injured children have autism. The American Academy of Pediatrics, the CDC, the FDA, and plenty of other medical organizations have adopted the Lies of Big Pharma without caring about the damage that is being done to the world's children. And that is why I resigned from the American Academy of Pediatrics.

Dr. Kohls is a retired physician who practiced holistic, non-drug, mental health care for the last decade of his forty-year family practice career. Prior to his retirement, he was a member

of Mind Freedom International, the International Center for the Study of Psychiatry and Psychology, and the International Society for Traumatic Stress Studies.
