Stefan Oelrich, head of Bayer’s pharmaceuticals department, admitted at the World Health Summit that the COVID-19 vaccine is gene therapy. He smugly stated that the drug companies knew people would reject the vaccine if they knew it was in fact a gene-altering injectable. They lied to us for profits as the vaccine certainly did not prevent anyone from contracting or transmitting the virus.

“If we had surveyed two years ago if people were willing to take gene or cell therapy and inject it into your body we would have probably had a 95% refusal rate,” Oelrich admits while forgetting many took the “gene therapy” through force.

Twitter has already flagged retweets of this video as [“misleading.”](#) The conspiracy theorists who were told they had no place in society were right as Big Pharma and governments worldwide used the public as guinea pigs for the largest gene therapy study in history. We still do not know the long-term health implications but have seen a variety of health issues and lingering side effects in the short-term. Revolutions have occurred over much less.
