Just before leaving office, the Bush Administration approved new Protective Action Guides (PAGs) for radiation releases that dramatically weaken public protections. In particular, the new PAGs would permit radioactivity in drinking water hundreds to millions of times higher than longstanding EPA standards.

The PAGs weren't able to be published in the Federal Register before Inauguration, but unless the new Obama Administration pulls them back immediately, they could be published in the next few days.

The Order issued by the White House Tuesday to suspend all rulemaking activities until the new Administration can review them might be interpreted by Bush holdovers at EPA as strictly only covering formal rulemaking. In order to avoid rulemaking legal requirements, the Bush Administration issued these new standards as Protective Action Guides instead. So it is critical to get EPA to immediately pull the PAGs back from the Federal Register.

Please call the EPA Administrator's office at 202-564-4700 today and leave a message, asking that the Radiation Protective Action Guides be withdrawn immediately from publication in the Federal Register.
