A determined propaganda blitz is well underway as the government sets the stage for the passage of Cybersecurity Act of 2009, introduced in the Senate earlier this year. If passed, it will allow Obama to shut down the internet and private networks. The legislation also calls for the government to have the authority to demand security data from private networks without regard to any provision of law, regulation, rule or policy restricting such access. In other words, the bill allows the government to impose authoritarian control over electronic communications.

Earlier today, the corporate media reported on a "powerful attack that overwhelmed computers at U.S. and South Korean government agencies," allegedly launched by North Korea. "South Korean intelligence officials believe the attacks were carried out by North Korea or pro-Pyongyang forces," the <u>Associated Press</u> reported.

It should be noted that South Korea's intelligence apparatus — known as the Korean Central Intelligence Agency — was formed under the auspices of the U.S. Army's Counter Intelligence Corps during the Korean War and is notorious for intervening in that country's politics and kidnapping Koreans living abroad and torturing them. In other words, anything South Korean intelligence tells the corporate media should be taken with a large grain of salt.

According to "security experts analyzing the attacks," Obama's White House, the Pentagon, the New York Stock Exchange, the National Security Agency, Homeland Security Department, State Department, the Treasury Department, Federal Trade Commission and Secret Service, the Nasdag stock market and The Washington Post were targeted.

All of this is happening as Senate Commerce Chairman John (Jay) Rockefeller — who has said we'd all be better off if the internet was never invented — plans a committee vote on cybersecurity legislation he introduced in April with Sen. Olympia Snowe, R-Maine.

Under Rockefeller's bill, the White House would be required to create an Office of the National Cybersecurity Adviser within the Executive Office of the President as well as an advisory panel of experts from industry, academia and the globalist NGOs, according to Congress Daily.

In May, Obama pledged to personally select a cyber czar who would report to the National Security Council and National Economic Council.
