The [CDC released the latest death figures](#) last week following the experimental COVID injections this week, and that death toll now stands at 4,863 people, adults and children, that have been recorded as dying after receiving one of the experimental COVID injections.

Over 285 million doses of COVID-19 vaccines were administered in the United States from December 14, 2020, through May 24, 2021. During this time, VAERS received **4,863** reports of death (0.0017%) among people who received a COVID-19 vaccine. CDC and FDA physicians review each case report of death as soon as notified and CDC requests medical records to further assess reports. **A review of available clinical information, including death certificates, autopsy, and medical records has not established a causal link to COVID-19 vaccines. However, recent reports indicate a plausible causal relationship between the J&J/Janssen COVID-19 Vaccine and a rare and serious adverse event—blood clots with low platelets—which has caused deaths.** [Get the latest safety information on the J&J/Janssen vaccine.](#) CDC and FDA will continue to investigate reports of adverse events, including deaths, reported to VAERS.

To put this number in perspective, since the CDC continues to claim that these deaths do “not establish a causal link to COVID-19 vaccines,” these deaths now exceed the total number of deaths reported to VAERS following vaccination for the past 23 years!

From 1/1/1998 through 11/30/2020 (the last month before COVID shots were given emergency use) there were 4,758 deaths recorded for a span of 23 years.

From the 5/21/2021 release of VAERS data:

Found 4,758 cases where Patient Died and Vaccination Date from '1998-01-01' to '2020-11-30'

Table

|  Age |  Count |  Percent |
|---|---|---|
| < 3 Years | 2,530 | 53.17% |
| 3-6 Years | 77 | 1.62% |
| 6-9 Years | 34 | 0.71% |
| 9-12 Years | 45 | 0.95% |
| 12-17 Years | 117 | 2.46% |
| 17-44 Years | 261 | 5.49% |
| 44-65 Years | 309 | 6.49% |
| 65-75 Years | 293 | 6.16% |
| 75+ Years | 581 | 12.21% |
| Unknown | 511 | 10.74% |
| TOTAL | 4,758 | 100% |

[Source](#)

Please take note that for that 23-year period, over 50% of the recorded deaths following vaccination were infants and toddlers under the age of 3, because this is the next targeted demographic to receive the experimental COVID shots: young children.

The Friday 5/28/21 data dump by the CDC into VAERS lists 4,406 of the reported deaths, along with 262,521 injuries including 3,299 Permanent Disabilities, 34,475 Emergency Room visits, and 14,986 Hospitalizations.

From the 5/21/2021 release of VAERS data:

Found 262,521 cases where Vaccine is COVID19

Table

|  Event Outcome |  Count |  Percent |
|---|---|---|
| Death | 4,406 | 1.68% |
| Permanent Disability | 3,299 | 1.26% |
| Office Visit | 45,004 | 17.14% |
| Emergency Room | 40 | 0.02% |
| Emergency Doctor/Room | 34,435 | 13.12% |
| Hospitalized | 14,949 | 5.69% |
| Hospitalized, Prolonged | 37 | 0.01% |
| Recovered | 100,406 | 38.25% |
| Birth Defect | 142 | 0.05% |
| Life Threatening | 4,590 | 1.75% |
| Not Serious | 103,639 | 39.48% |
| TOTAL | † 310,947 | † 118.45% |

† Because some cases have multiple vaccinations and symptoms, a single case can account for multiple entries in this table. This is the reason why the Total Count is greater than 262521 (the number of cases found), and the Total Percentage is greater than 100.

It is common knowledge now that reports submitted to VAERS for vaccine injuries and deaths historically are less than 1% of actual deaths and injuries. Most go unreported.

But what if the data for the new experimental COVID bioweapon shots that is reported to the CDC is not even being entirely published and shown to the public?

How many actual deaths could actually be happening shortly after receiving one of these experimental shots? Tens of thousands, one hundred thousand?

Albert Benavides has a Bitchute channel called [WelcomeTheEagle88](#). Each week he does a deep dive into the data released by the CDC into VAERS. He records and stores everything, and has even found that the CDC removes records of deaths some weeks that were there in previous weeks.

Over 59% of the deaths VAERS is releasing to the public happened in February or earlier. So these numbers are severely under-reported.

Here is his latest analysis from last Friday.
