.

*The Centers for Disease Control (CDC) released their investigative findings of a recent outbreak of COVID-19 in Massachusetts. [\[Press Release Here\]](#) According to their study, 74% of those infected during the regional outbreak were previously vaccinated.*

According to the study, 469 cases were tracked from the Provincetown, MA, outbreak July 3rd through 17th. Of the 469 COVID cases identified, the CDC is claiming 346 (74%) occurred in previously vaccinated people. Specimens from 133 of the patients showed 90% of those cases were the “Delta variant”.

Five people were hospitalized, no-one died during the outbreak. [\[Read Study Here\]](#)

*([WaPo](#)) [...] the study found that vaccinated individuals carried as much virus in their noses as unvaccinated individuals, strongly suggesting that vaccinated people could spread the virus to each other. ([link](#))*
