As Big Tech, the Biden Administration, Hollywood, politicians, employers and health care providers around the nation galvanize the public to undergo Covid vaccination, the number of casualties who have died or suffer life-threatening effects from the experimental mRNA injections continues to climb.

Those who don't want to be herded into the mass drug trial are told to just “get on with it” so we can “safely” move on with our lives.

Despite the unrelenting effort to censor “[vaccine hesitancy](#),” thousands who are experiencing the vaccines' ill effects are resorting to a private Facebook group to sound the alarm on the medical malpractice.

In post after post, over 25,900 members of “[The COVID 19 Vaccine Victims & Families Group](#)” detail the horrific health abnormalities they have suffered, including strokes, blood clots, excessive bleeding, needle-like pain in their limbs and paralysis, after receiving Moderna, Pfizer, Johnson & Johnson and AstraZeneca vaccines.

Covid19 Vaccine Victims & Families

Tracey Stevens shared her first post.

· 2 hrs ·

I'm having ongoing problems since I had my AstraZeneca shot at the end of March, it accumulated in my going into hospital with a suspected stroke. After further tests it seems a small clot close to my heart according to the heart trace. Dispersed quickly with aspirin which I was told to take.

I'd refused a Covid test in the hospital that day because I was convinced that I was gonna die and I didn't want to be counted as a Covid death (may sound dramatic) but that was the state of my thinking at the time.

A follow up with my GP said I had an infection in my blood, but after a course of antibiotics my bloods still show a problem. Now awaiting a referral to Neurologist. Don't know how long that could be given the state of our NHS waiting times, I know I won't be a priority

My symptoms started slowly, pins and needles and muzzy feeling in my head and arms, followed by a hungover feeling, dribbling from mouth and then the episode that scared me into calling 111 and spending a night in EMU

The consultant dealing with me was rude, patronising and dismissive. He's was cross because I'd refused to have a Covid test. He put my problem down to being a migraine or a neurological virus and assured me I hadn't had a stroke.

Getting home I realised I'd had an abnormal heart reading which is why I followed this up with my GP who was cross that the heart problem hadn't been followed up and equally perplexed that no blood results had been forwarded to them. She on reflection thinks I was closer to having a heart attack than a stroke To be fair from then on my Dr has been pretty good, although slow (regarding Covid restrictions 🙄) she is at least trying to find an answer.

The brain fog continues as does the numbness and constant ache in the injection sight. My husband had first jab with no problems and his second and still no problems so he's convinced I'm losing my marbles. He hasn't done the research I have, and doesn't understand my fears ect.

We are all part of an ongoing experiment and it's really hard to comprehend.

That's my story so far

From friend of mine:

My daughter just called to say her husband is massively bleeding now and on his way to the doctor. He got the c jab and is passing blood clots every time he uses the bathroom. The toilet is full of blood. Just like the women experiencing bleeding. This is the first real symptom he has had since the vax, which he got a couple months ago.

First I want to clarify I'm not anti vaxxer, but I will never know if this was caused by the shot: My mom had Pfz months ago, she has been suffering from what she describes as "pain+burning feelig+itch INSIDE her skin" all over her body. CT scans, X rays and blood work to check all organs were good. Doctors say symptoms sound like shingles was activated. We will never know if it was the shot but she never had this before 😞

Covid19 Vaccine Victims & Families

Jeff Petricka asked a question  .

 · 14h · 

My brother recently had a major sudden stroke. He is in mid-50's, in really good health, all his vital signs were that of someone 25 years younger and athletic. I believe he rec'd the Pfizer vaccine a couple of months ago. He doesn't drink, never smoked either. I asked about if this had any tie to his vaccine shot, and of course I was shot down almost immediately by those in the family who have been vaccinated and also his doctor. They checked about everything and then discovered he was born with a hole in his heart which now needs to close to prevent further strokes.

My question is, why wouldn't there be a possibility to tie his event to that vaccine? He has had ZERO health issues throughout his life, no sign of heart trouble, no diabetes, etc. And now just a month or so after his second shot, he has a stroke. I get the mentality from those vaccinated, the knee-jerk "NO, it can't be the vaccine" which possibly caused this or enabled it. But HOW does ANYONE know at this point? The vaccines have been out since January after a rushed clinical trial. I am not saying everyone will have a stroke either, what I am saying is why the rush to vaccinate every healthy person out there, when their survival rate from Covid surpasses 99 percent? How does anyone know this would be safe ultimately for a certain blood type or congenital condition such as one with a hole in the heart. Don't ask any questions though! Certainly there can't be side effects for certain inherent conditions, right?

My brother was blessed, he was at an event where his condition was quickly diagnosed. But he surely could have died, he wanted to lie down and take a nap, of which he would have never woke up again from.

Personally, when I see the depraved communities and a lying media pushing for something, I automatically will question it. Problem is, anyone who DOES question it, gets chastised as a conspiracy theorist. Just a fluke coincidence between a near death stroke and a vaccine shot? I think NOT!

Julie Love Peace 

My mother was poisoned by Pfizer on Dec 28, 2020 and days after the poisoning she had a major blood clot in her brain and then massive stroke, died on Jan 8th. When I found her suffering I called 911 and immediately told paramedics she JUST HAD the Shot! They said Impossible, then brain surgeon I said the same thing and he said IMPOSSIBLE. Not impossible, I watched it happen. My mother was fine. No health problems. Odd? No! They lie. Cover up. One day the truth will come out. TELL THE TRUTH!

I totally agree with you, I am not anti vax but these questions need answers, my daughter aged 34yrs died 9 days after the vaccination and the coroner has proved it was the vaccination..

A lot of you have been posting on here getting pretty decent answers, so I'm "sticking a leg out" (literally) and hoping someone can help.

I had no direct adverse reactions to jab 1 or 2 (Oxford AZ), but since my second my legs and arms have started to do this sporadically.

First it starts with a feeling of ants crawling up your arms and legs then a pop and my veins become very prominent.. almost black looking. Then the limb starts to go blue.... **See More**

Hair loss, fatigue and blood loss.

Had AZ jab early may and probably lost 50 to 60 percent of my hair since. I've gone from going to cross fit 5 times per week to lucky if I manage a 30min cycle 3 or 4 times per week. I'm just wiped.

Oh and I bled vaginally worse than after I had both children. Way too much info but it was literally flooding from my body. Spoke to the practice nurse who told me i was being ridiculous and to not Google. I'm talking sitting on the toilet and clench my stomach and blood landed in the toilet for a full 24 to 48 hours

My iron levels are low and kidney function is low.

Anyone else had similar?

I wasn't anti vax but the fact I'm now still not right and the only difference being is the jab equates to categoric certainty I won't have the 2nd.

Currently waiting to see a private endocrinologist.

Update: please feel free to share We are open to any nugget of insights or info.

I'm looking for those of you who might have similar symptoms to my daughter. My daughter works in the hospital and was working on / with a Covid floor at the time. Thus she needed the Covid vaccine. Pfizer vax second dose March she was sick following dose for several days with an extremely high fever. Then all hell started breaking loose bit by bit.

When it began, she had pain in her wrist, numb fingers and palm on her right side. Then it moved to right leg. Then a day later she could barely move her joints and lost most of her strength and small motor skills.

Another day passes and now her left side is showing the same symptoms. This has lasted for a few weeks. Add to that. Fevers... nausea.... Stomach ache , head aches. ...swollen knees... her right leg is visibly more swollen than the left with loss of muscle tone.Many MRI's a CT scan, spinal tap and 46 labs tests later. They ruled out stroke, and MS. However now she's tested positive for 11 autoimmune diseases. My daughter was spunky, happy healthy 21 year old pre med college student now her world has been turned upside down. Photos added to put a face to the story. ❤️**** update to add

We are hoping that just because she tested positive for 11 autoimmune diseases... she may not actually have all of them. We are still in the process of seeing specialists to fine tune her issues.

Lupus was the strongest positive test. As well as scleroderma and Sjögrens. She wants to go to med school sooo bad but if her health doesn't improve. It may not be possible.

Kirsty Louise asked a question .

· June 30 at 5:29 PM · 

Hello everyone, I'm really not sure who else I can speak to so I'm hoping someone here will be able to help with some advice.

My Dad (50) had his second jib almost 3 weeks ago and he's not been well ever since.

After the first one he came up in a prickly heat type rash that went away.

The day after the second one he came up in welt marks like hives that lasted 2 just over 2 weeks.

Although they've gone, he's been achey with flu like symptoms ever since. He went home from work Friday just gone and went to be feeling fatigued and just wanting to sleep.

I saw him on Saturday and he just looked sick, so tired, so pale... I was worried.

He went to A&E Monday as he wasn't feeling himself and blood work didn't show anything wrong so they sent him home.

He woke up this morning with a headache and a cough and within an hour went back to sleep. That's all he's doing is sleeping.

My Mum called the GP Tuesday morning and he told my Dad that he has "long covid" as a result of the jab - his words.

My dad had a negative PCR test on Monday - he does LFTs twice a week every week and has had a few PCR tests over the last year. He hasn't got covid nor has he ever had covid so how can he have long covid?

And if it's from the jab, how can that be when there's no covid in it?

It doesn't make sense and I don't believe what the doctor is saying.

He has a physical job, no underlying health conditions, fit and healthy, doesn't smoke and eats well.... now he's bedridden and nobody seems to know why.

Hey everyone. I got one dose Pfizer March 18.
I instantly had a pounding headache back of my head. Two days later my left eye was SO painful, red, and swollen.
Eventually I lost vision in that eye.
Now in both eyes I have uveitis (inflammation) and steroids aren't helping.
My eye pressure went from 13 to 27.
My vision went from 20/20 to 20/50. And SO much more!
I see my pcp, ophthalmologist, neuro ophthalmologist, retina specialist, and will see rheumatologist in sept.
I had an ANa done in 2016 which was negative.
Now it's positive as well as other inflammation markers.
Anyone else have eye symptoms? The pain is so real

· June 30 at 5:29 PM · 

Hello everyone, thank you for adding me. I am looking for similarities in a possible reaction. My wife had the second dose in February. About a month or so ago she started losing sensation in her hands and legs. She can barely walk without help. The doctors ruled out a vaccine reaction due to how long it had been since her dose. IS there any reports of reactions happening later than a few days ? Looking for answers. Waiting now for MRI and blood tests.

Kathryn Anne Kendall shared her first post.

My dad had his second dose of the moderna shot and within days, died of a heart attack (April 28.) Prior to the shot he had a physical and was given a clean bill of health. After digging deeper about the Moderna shot, heart complications, heart attacks specifically is what I found to be the most highly correlated. Yet everybody thinks I'm crazy for questioning if his death was related to the jab.

My sister had the Johnson and Johnson shot also in late April, had the "flu like" symptoms that night, but never got better. She was in ICU within days of the shot, then ventilator, and died May 2. Four days after my dad. She was 49, no health problems, 4 kids, they claimed she had "covid pneumonia." But after digging deep and researching Johnson and Johnson, severe lung damage, lung complications, symptoms exactly what my sister experienced and specifically with her age, is what i found to be one of the most highly correlated. Yet everybody thinks I'm crazy, for questioning if her death was related to the jab.

I'm sharing this information, hoping it is helpful for others, as we all try to understand how this shot has impacted our families.

(I was hospitalized with guillaine barre in 2010 after the swine flu shot.)

This is mine and my husbands story after being around vaccinated family. It started two days after. With me it started off feeling like someone was sitting on my chest littlerly. I was breathing heavier. It was a couple days after. Then it suddenly escalated to ticks like when I was experiencing it it reminded me of autism. I also developed sudden bipolar symptoms out of thin air and Parkinson's disease symptoms. Then my TSH (thyroid levels went all over the board to a dangerous level to the point I could have went into a coma. My TSH went in less than a month from a 1. To a 18.77 in less than a month and shot to a 3.66 three days later in the ER. I felt like I was fighting to stay awake and going insane. Then suddenly I had chest pains. Stroke like symptoms and heart attack symptoms. My neck would stiffen up and it was like I experienced sudden dementia to point I couldn't even think and forgot my train of thought every minute. It was a traumatizing experience. I am only 37 years old. Then my arm swelled up and my left foot turned purple. I react now to food when I eat and get scared to eat at times. My husband went from around same time I felt like someone was sitting on my chest he was experiencing it at exact same time. Within a couple weeks he couldn't walk and said his arms and legs felt like Jell-O. We both I forgot to mention. We both also got extremely dizzy. He went within approximately 3 weeks he suddenly had a stroke and they found a blood clot in his brain. He is now on blood thinners. He also lost his taste before all of this and he was just at the doctors two days before stroke happened and they couldn't figure out what was going on with his legs and arms at first. I was also diagnosed with pnamongia while he was in hospital for his blood clot. I went to ER because I suddenly had stroke symptoms myself and that was when I was diagnosed with pnamongia. Also later my blood pressure was up and my heart rate goes up now as well.

Irrespective of the heartbreaking testimonies, Facebook inserts a disclaimer on each of the group members' posts to assure users the vaccines are "safe" and "effective."

"COVID-19 vaccines go through many tests for safety and effectiveness and are then monitored closely," the notification states, citing the World Health Organization.

COVID-19 vaccines go through many tests for safety and effectiveness and are then monitored closely.

✕

Source: World Health Organization

[Get Vaccine Info](#)

The notification directs users to Facebook's COVID-19 information Center, which promotes the vaccine and provides locations offering vaccines in each state.

Find a COVID-19 Vaccine

People 12 and older can get a COVID-19 vaccine in the US. See nearby locations offering appointments for you or a loved one. Your state website may include additional locations.

[Find a Vaccine](#)

Facts About COVID-19

These facts come from leading health organizations. They correct common, untrue rumors about COVID-19.

Vaccines are thoroughly tested for safety before they're made available to the public

Vaccines go through extensive trials before they can be introduced in a country. Expert doctors and scientists follow strict international standards while deciding to make a vaccine available to the public. Like all medicines, vaccines may cause side effects that are usually minor and temporary. More serious side effects are extremely rare. A person is far more likely to be seriously harmed by a disease than by its vaccine.

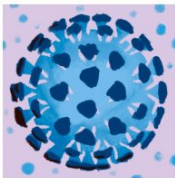

Source: World Health Organization

COVID-19 vaccines were developed quickly while maintaining the highest safety standard possible

The need for a COVID-19 vaccine was urgent, so governments and companies spent much more money to develop it. Research and development took place at the same time around the world while still following strict safety and clinical standards. This allowed for faster vaccine development, but doesn't make the studies any less rigorous or the vaccine any less safe.

Source: World Health Organization

COVID-19 vaccines can't give you COVID-19

You can't get COVID-19 from any of the vaccines. None of the vaccines available to the public contain the live virus that causes COVID-19. They may cause minor side effects such as a sore arm or mild fever. This is a sign that the vaccine is working.

Hello, I received both of my Pfizer Covid vaccines in January and have been struggling with joint pain ever since. It started in my hands and spread to wrists, elbows, feet and knees. I also experience tingling in my hands, and my fingers turn red when I go outside if it's warm, especially if they are hanging down and my periods have become super light and short. Just wondering if anyone else has experienced this. Also is there anything natural I can do to try to reverse it. Here is a picture of what happens to my hands and toes now.

Not sure it's related my adult daughter who also has downs syndrome was basically ordered to have the stabbing, she was stabbed 3 weeks ago with P and has been in hospital with pain now it turns out her kidneys aren't working correctly. She has never been in hospital in her life she is 23 and apart from an extra chromosome she is normally fit and healthy.

They first said it was a bad UTI but now say there's no bacteria in her urine, but her kidneys aren't function is low.

I'm so worried about her she looks so ill, plus they are injecting her everyday with blood thinners which seems to be NHS protocol

Anyone with information about P damaging kidneys please let me know

Just a bit of an update , the hospital have finally said my wife did die from the vaccine and they will tell the coroner for the inquest. Three months since her death it's took to get the answers . I do know my wife has saved lots of peoples lives in my area , with clots from the vaccine, they know what treatment to use.

In my eyes she is a Saint. I did find out that she had a 300cm yes 300 cm clot in the artery to the bowel. Along with PE. She didn't stand a chance . Found out that if they took the clot out. It can replicate somewhere else, so it's a losing battle with these clots . These vaccines are killing machines.

I got Moderna 3 weeks ago. Zapping pains in my legs immediately after. Got worse and worse until I was bed ridden for 9 days. Spent about 4 trips to the emergency and 3 days in the hospital. Diagnosed with "Rhabdomyolysis" in the legs. Told to drink 5L of water a day or my kidney's will fail. Creatine levels over 55000. I was perfectly fine before I got the vax. I still can't walk without excessive pain and muscle cramping/ falling over. No flu shot should do this. I'm 26 years old for fricks sake.

My Father died of a massive heart attack or blood clot April 8th. He did have diabetes but zero heart issues his entire life. He had himself examined every year and was proud of low blood pressure.

2-3 weeks after his second Pfi*er he literally dropped dead on the street in front of his restaurant instantly. At only 70 years old, no warning besides an episode the night before chest pain.

For some of you this may not be part of your beliefs but I am a paid medium of 20yrs. My dad asked me and my family not to get the v*x from the other side. It’s been very hard for me to share this story. But I want you to know, we also know another family who’s grandma died within 48hrs of having hers.

Due to the pressure working with the public and living in California I chose to get the J & J, my family is has not had it. I tuned into the m r n a technology, I saw horrible horrible things, a dead bouquet of roses. Please protect yourself if you have to get it use the older technology.

Just had my wife’s medical records from her death 23rd March in Wigan. Not happy reading , she ended up with a large clot near her bowel which was inoperable. Also with clots on her lungs. All over her medical records was Covid vaccine from the docs. But the idiot pathologist has put natural causes, I have now got to wait till November 2021 for an inquest. It was reported that Salford had cases of same as Michelle . Why wasn’t this reported , the Govt were saying rare occurrences of these clots, bollocks. This govt will pay for her death and many others. We need as a group to fight for justice. Please don’t delete, this is innocent peoples lives we need justice for .

I have had both doses of what I though were az but it appears it wasnt, 3 of us had the same batch same day and all 3 poorly, my daughter being very sick for 2 days none stop, myself having nerve pain for 3 days some of which has not recovered, my partner ended up in A&E very poorly and is still unwell and on lots of medication, we received that batch in March.

My daughter has declined her 2nd one after being so sick off the first and could now lose her job, my partner has been advised not to have the 2nd one, I myself felt I had to as I work in the care sector, no pressure whatsoever from employer but massive pressure from everywhere else

I am now very concerned that we were not in fact given az as per reports I am reading and was anxious enough before now my anxiety is through the roof, not sure what to do, here is a quote from the article I have just read on beeb Az also says it's working with the EMA on the "inclusion of Cov a recognised v for immu passports" - although the EMA says there is currently no application for market authorisation.

I have edited words so it doesnt get censored

I would appreciate any thoughts on this please as we may have given consent for az but did not give consent for anything else to be used instead
