*"My beautiful daughter lived every day of her life to the fullest before she got her 18 month MMRV + DTaP vaccine.*

*Alina was born healthy and a happy little bundle of love.*

**After that day when Ali received her vaccines, she started sleeping a lot, stopped playing, lost all interest in food.**

Childcare sent me a message checking if she was ok because she was sleeping a lot and looked extremely tired. A week after the vaccines she still refused to eat anything and didn't play with anyone.

She refused the bottle and the next moment I saw her face stiffen to the left and her jaw was clamping. We called an ambulance and the paramedics said **they had never seen this kind of seizure before and they just didn't know what to do**. It took us 55 minutes to get to the hospital and Ali continued to seize throughout the entire journey.

**Two days later she seized again, and I was told by the neurologist - "Don't worry about your daughter, she will be fine — her MRI looks good. She is the most well of all the babies in the ward and she will not die."**

We went back home and were given Keppra to treat Ali's epilepsy.

Within a week, Ali had her third seizure, and she never returned home after that day.

Ali died in my arms in a fairy garden at the hospital."

—Rajni Sharma, Alina's mother
