Healthy COVID-19 mRNA vaccinated children are dying of infections they should not be dying from: influenza, strep A, meningitis, sepsis. Not just in [Australia](#) either.

All highly COVID-19 vaccinated countries. Here are some examples:

[July 6, 2023](#) - Noosa, Australia - 11 year old Emma Schwab died suddenly from "influenza B" one day after being released from the hospital. "Cases surge in Australia."

A devastated family has been 'torn apart' after their **11-year-old daughter died from the flu**, as warnings intensify over the dangers of influenza B among young children this winter.

Emma Schwab, 11, from Noosa on **Queensland's** Sunshine Coast, died last Thursday after contracting Influenza B.

A **GoFundMe page**, set up by a friend of the girl's parents to cover her funeral costs, has so far raised almost \$9,000.

'She was only 11 years old. Understandably the family is torn apart.'

A Sunshine Coast Hospital and Health spokesperson, where Emma was treated, offered 'sincere sympathies to the family during this extremely difficult time'.

'Their experience is heartbreaking for everyone involved,' they said.

'Our clinicians are providing support to the family.'

Emma's death comes after a teenage girl from the Central Coast also died after contracting Influenza B.

The Year 9 student attended St Joseph's Catholic College in East Gosford and passed away on the weekend after falling ill with the disease several weeks ago.

Parents with children at the school received a letter informing them of the girl's tragic death, according to the **ABC**.

'(She) was a well-loved student, thoughtful to the needs of others, a true friend and a valued member of our college community,' the letter read.

[Feb. 17, 2023](#) - UK - 6 year old Milly-Rose Stirrup suddenly fell ill on Feb. 14 with pain in her stomach and her heart. Within a few days she was dead. Doctors suspect sepsis.

Family's tragedy as girl dies hours after experiencing belly ache

"Milly-Rose made an impression on everyone. She was an angel sent from above."

A little girl has died suddenly of sepsis hours after complaining her belly ached.

Milly-Rose Stirrup, six, was off school with a bug but told her parents Shaun and Pip her stomach and head hurt.

She had been enjoying an ice lolly and playing on her Nintendo Switch but suddenly fell ill.

Her mum and dad took her to the hospital, where they held her hand as she was hooked up to antibiotics and discussed what they would do once she was well enough to go home.

But, tragically, she never returned home.

Just a few hours after being admitted to Manchester Children's Hospital, Milly-Rose was pronounced dead.

The cause of her rapid deterioration has not been formally confirmed, but doctors believe she was suffering from sepsis, [reports Manchester Evening News](#).

Milly-Rose, who was said to "love life" and would "light up any room" came home from school last Tuesday, 14 February, feeling unwell.

Her parents suspected she had caught a 24-hour stomach bug which was doing the rounds.

Shaun said: "She started being sick so we kept her off school the following day and she was just playing on her Nintendo Switch doing what kids do when they aren't well.

"She went to bed on Wednesday night and woke up on Thursday morning at 1am [saying her belly was sore and her heart](#).

"I felt her heart and it was beating out of her chest.

[Dec. 20, 2022](#) - Utah - 17 year old student in a boarding school for troubled teens, Taylor Goodridge, died of peritonitis and sepsis which caused her organs to fail. She started having symptoms on Dec. 9, back pain, difficulty breathing, vomiting.

Father sues Utah boarding school for malpractice after daughter's death

The father of a teenage girl who died at a boarding school in Utah is suing the facility, which he alleges ignored his daughter's severe pain weeks before her death. FOX 13 Salt Lake City reports.

A 17-year-old student at a "[therapeutic boarding school](#)" in Utah died of sepsis after school staff ignored her health complaints, according to recent autopsy results and a lawsuit filed on behalf of the deceased student and her family.

Taylor Goodridge died of peritonitis, an infection of abdomen tissue, followed by sepsis, which caused her organs to fail, in December 2022 at [Diamond Ranch Academy](#) in Utah.

"It's something that's easily treated with antibiotics, especially with a healthy 17-year-old," attorney Alan W. Mortensen of Mortensen and Milne told Fox News Digital. "The first signs of peritonitis are vomiting and stomach cramps, both of which Taylor had for... at least two-and-a-half weeks before she died. She was never taken to the hospital. Her complaints were ignored, and she was punished for making the complaints."

The infection eventually spread to her heart, liver, kidney and pancreas, said Mortensen, citing the Utah Medical Examiner's autopsy results.

[Dec. 13, 2022](#) - 18 year old Maria Alexandra Gaynor was a healthy student at Dalhousie University, which mandated COVID-19 mRNA vaccines on all students. She died suddenly of Meningitis.

Sep. 10, 2022 - Italy - 18 year old Lorenzo Squillace, who was a lifeguard from San Benedetto del Tronto, died suddenly on Sep. 10, 2022 after feeling ill at home. He died of sepsis.

UPDATE: Cause of death revealed after teenage lifeguard dies suddenly in Italy's San Benedetto del Tronto

By Matthew Roscoe · 15 September 2022 · 17:08

UPDATE: Cause of death revealed after teenage lifeguard dies suddenly in Italy's San Benedetto del Tronto. Image: Danyeffe Effe/Facebook

THE first results of the autopsy ordered on the body of Lorenzo Squillace, the healthy young lifeguard from San Benedetto del Tronto in Italy who died suddenly at the age of 18, have been made available to Italian media outlets.

UPDATE 5.08 pm (September 15) – Following the death of the lifeguard from San Benedetto del Tronto, who died suddenly on Saturday, September 10, an autopsy was ordered by the public prosecutor's office.

According to the first results of the autopsy examination, Mr Squillace appears to have had a blood infection which, as the forensic doctors confirmed, was realised too late, as reported by [bigodino.it](https://www.bigodino.it) on Thursday, September 15.

Aug. 23, 2022 - Naples, Italy - 19 year old Greek female navy cadet Talia who was on board Prometheus ship died 48hr after feeling unwell on Aug. 23, 2022. She had hemorrhagic rash, then sepsis.

Australian researchers publish study proving COVID-19 mRNA vaccines damage the immune systems of children!

Published on [Aug. 25, 2023](#), the paper is called: "BNT162b2 COVID-19 vaccination in children alters cytokine responses to heterologous pathogens and Toll-like receptor agonists"

Study looked at 29 kids ages 5-11 and found that:

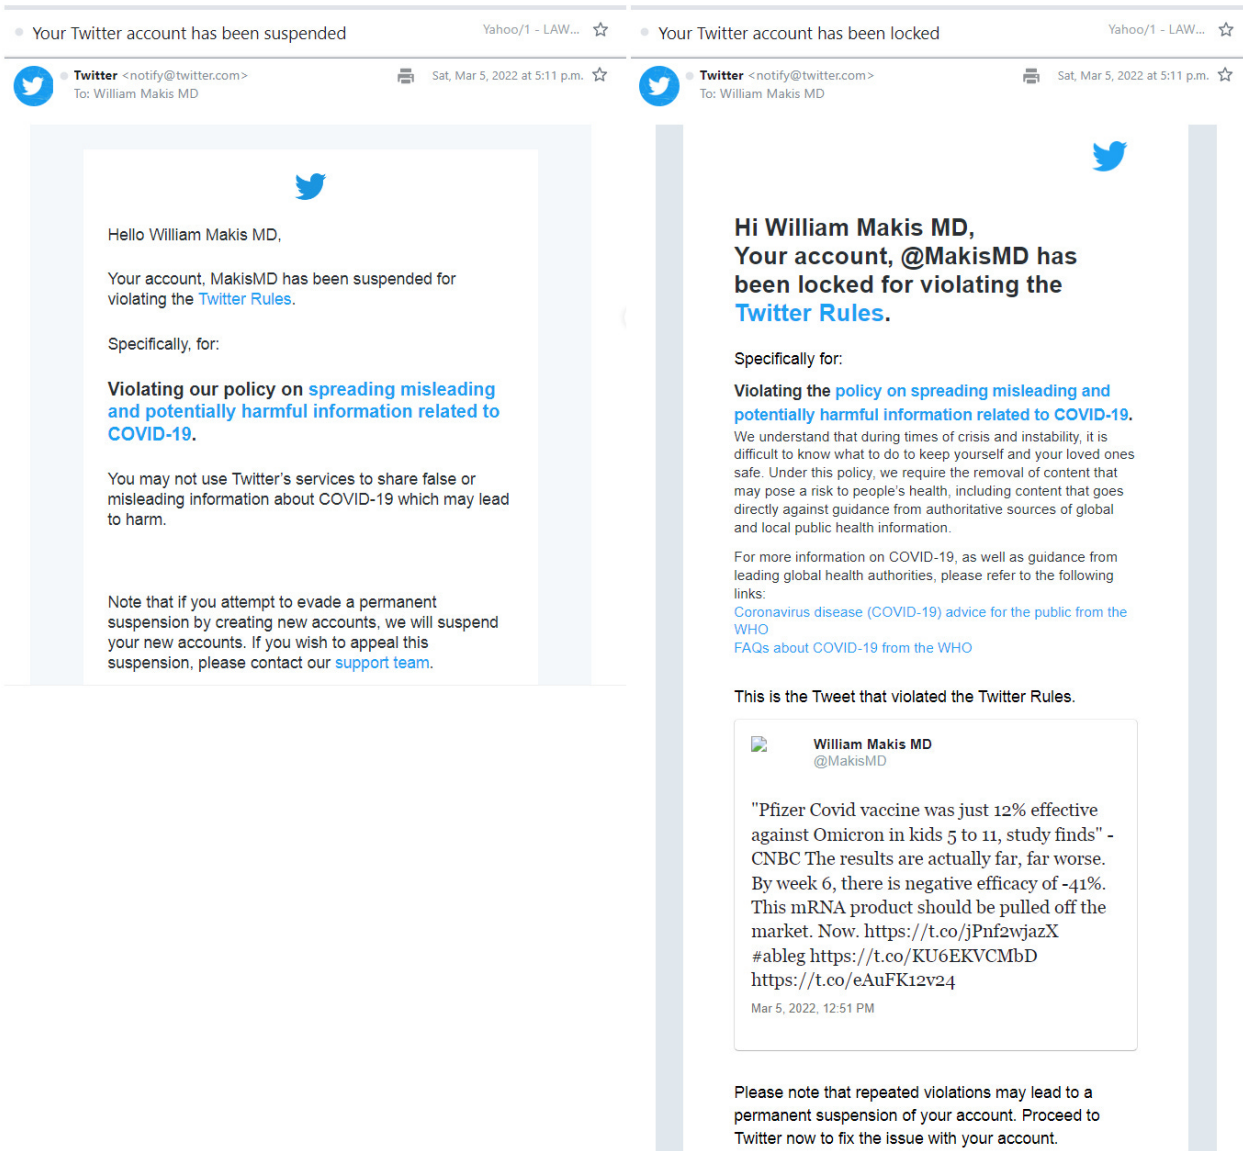

- "BNT162b2 vaccination is associated with a decrease in bacterial and viral stimulant-induced cytokine responses one month after vaccination"
- "BNT162b2 vaccination is associated with a sustained decrease in cytokine responses to viral, but not bacterial, stimulants six months after vaccination"
- "These data show that a SARS-CoV-2 mRNA-based vaccine alters heterologous immunity in children and that these effects can persist up to six months after vaccination"

Translated, this means that Pfizer COVID-19 mRNA vaccine suppresses the immune systems of children ages 5-11 for at least 6 months, leaving them susceptible to viral and bacterial infections

It only took researchers 1.5 years to catch up to my warnings against mRNA vaccinating children ages 5-11.

On March 5, 2022 at 12:51pm, I posted a Tweet: "Pfizer Covid vaccine was just 12% effective against Omicron in kids 5 to 11, study finds - CNBC. The results are actually far, far worse. By week 6, there is negative efficacy of -41%. This mRNA product should be pulled off the market. Now."

By 5:11pm my Twitter account was locked, suspended and stayed suspended for 11 months.

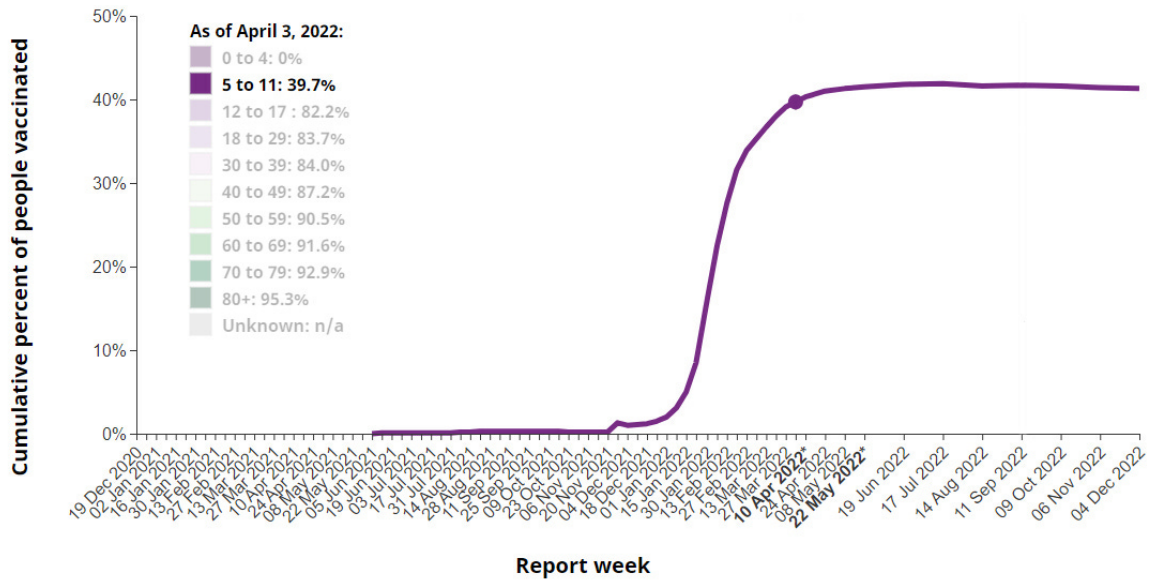

Twitter would go on to suspend and terminate every doctor and scientist who raised concerns about safety of mRNA vaccines in children.

COVID-19 mRNA vaccines were rolled out in Canadian and US children 5-11 years old from Dec. 2021 to May 2022.

Figure 4. Cumulative percent of people who have completed the primary series with a COVID-19 vaccine in Canada by age group and report week, December 4, 2022

What happened 6 months later? Nov-Dec 2022: USA had worst flu season in 2 decades!

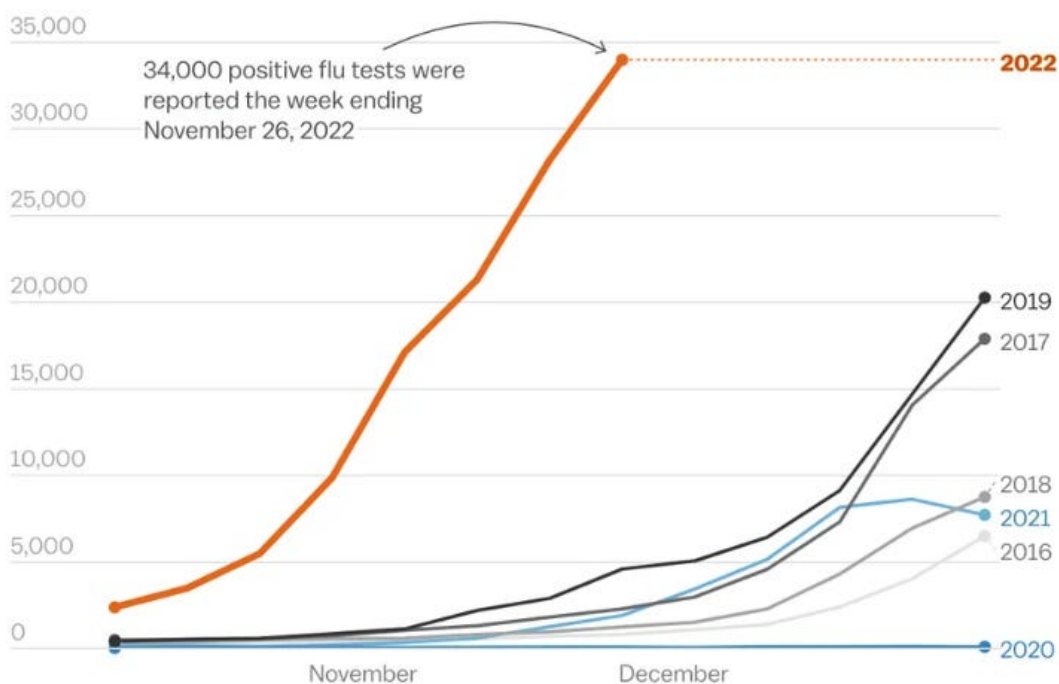

This flu season's **ferocious start** has given way to record-shattering levels of transmission – and massive strains on the American health system.

In the week ending November 26, more than 34,000 positive flu tests were reported to the Centers for Disease Control and Prevention (CDC) from labs around the US, as shown in the orange line on the chart below. That's more positive flu tests than have been reported in any single week during any flu season on record, going back as far as 1997.

The trajectory dwarfs the past six flu seasons, including the relatively bad 2019-2020 one that immediately preceded the start of the Covid-19 pandemic (shown in the black line).

The flu spread early and quickly this year

Positive influenza tests reported to CDC, 2016-2022

Vox

Canada also had worst flu season in years: “10 kids dead amid pediatric flu surge”.
“Pediatric hospitalizations were 20x higher than usual for the time of year.”

Flu season: Why are so many Canadian children falling sick?

By Nicole Ireland • The Canadian Press
Posted December 16, 2022 9:43 am

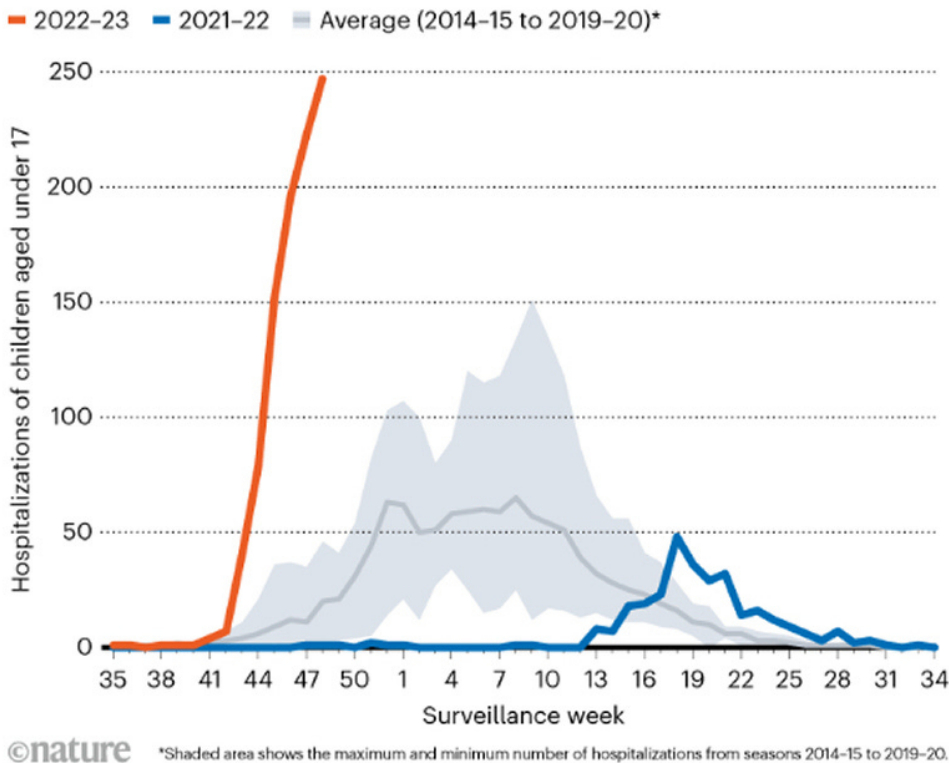

WATCH: Tridemic: 10 kids dead amid pediatric flu surge, worst still ahead – Dec 11, 2022

The **flu** has returned with a vengeance after being absent for a couple of years during the COVID-19 pandemic. It's hitting children especially hard. Here's what doctors say is happening, and why.

SEVERE FLU

In late November, paediatric hospitalizations for seasonal flu in Canada were 20 times higher than usual for the time of year.

Flu causes huge spike in child hospitalizations in Canada

My Take...

An Australian team has just proven that the Pfizer COVID-19 mRNA vaccine suppresses or damages the immune systems of children ages 5-11 for at least 6 months, leaving them susceptible to viral and bacterial infections.

Millions of children took the Pfizer mRNA jab because their parents trusted the corrupt officials who approved those jabs without any safety studies!

Once the jabs were rolled out in children ages 5-11 in the first quarter of 2022, the following happened approximately 6 months later:

- US had worst flu season in 2 decades in late 2022 ([source](#))
- Canada was in a “[flu epidemic](#)” in late 2022, with pediatric hospitalizations up 2000%
- Australia had 360% increase in strep A infections in 2022 ([source](#))
- Australia is having an “intense flu season” in June-Oct 2023 where children are “being hit the hardest” ([source1](#)) ([source2](#))
- UK had “worst flu season in a decade” in late 2022 ([source](#))
- New Zealand is in for another large and early flu season ([source](#))

I believe hundreds of children have died from immune system suppression caused by taking the Pfizer COVID-19 mRNA vaccine, and the record flu seasons seen in US, Canada, Australia and UK in 2022 and 2023 are the direct result of immune damage caused by Pfizer’s COVID-19 mRNA vaccine.

The Worldwide Corona Crisis, Global Coup d'Etat Against Humanity

by Michel Chossudovsky

Michel Chossudovsky reviews in detail how this insidious project “destroys people’s lives”. He provides a comprehensive analysis of everything you need to know about the “pandemic” — from the medical dimensions to the economic and social repercussions, political underpinnings, and mental and psychological impacts.

“My objective as an author is to inform people worldwide and refute the official narrative which has been used as a justification to destabilize the economic and social fabric of entire countries, followed by the imposition of the “deadly” COVID-19 “vaccine”. This crisis affects humanity in its entirety: almost 8 billion people. We stand in solidarity with our fellow human beings and our children worldwide. Truth is a powerful instrument.”
