Today, the dangers of military escalation are beyond description.

What is now happening in Ukraine has serious geopolitical implications. It could lead us into a World War III Scenario.

It is important that a peace process be initiated with a view to preventing escalation.

Global Research does not support Russia’s invasion of Ukraine.

The history of this war must be understood.

The bombing and shelling led by Ukraine’s Armed Forces directed against the people of Donbass started eight years ago, resulting in the destruction of residential areas and more than 10,000 civilian casualties.

A bilateral Peace Agreement is required.

At Monday’s routine news conference of the Chinese Foreign Ministry, the spokesperson for the ministry rebutted the US’ inconsistent and flawed responses regarding its biological laboratories in Ukraine, urging a full clarification of its bio-military activities within and outside its borders.

When a BBC reporter asked that the US claims seem to suggest that its secret research involving viruses in Ukraine has nothing to do with the military, Zhao Lijian, the ministry’s spokesperson, directly pointed out that the US’ response to the issue so far has been

“If the information released by the US itself is inconsistent and full of loopholes, how can the international community believe that the US is fulfilling its BWC obligations?” Zhao asked.

The US is the only country that opposes the establishment of a verification mechanism for the BWC. At the same time, for decades the US has been accusing other countries of not complying with the treaty, and even sanctioning and using force against these countries.

“When it happens to the US, it evades inspection, which is a typical US double standard,” Zhao said.

The spokesman urged the US to make a full clarification of its bio-military activities within and outside its borders in a responsible manner and to stop opposing the establishment of a verification mechanism for the Biological Weapons Convention, which would help restore the international community’s confidence in the US compliance with its international obligations and would also help raise the level of global biosecurity.

The World Health Organization has “strongly recommended” to the Ministry of Health in Ukraine to safely destroy “high-threat pathogens” that might be housed within the country’s public health labs in order to prevent “any potential spills.”
