

Top Plastic Polluters: Coca-Cola, Nestlé, and PepsiCo

Top Plastic Polluters for A Second Year in a Row

Coca-Cola, Nestlé, and PepsiCo are the top 3 most identified companies in global brand audits for the second year in a row, according to a new report [“BRANDED Volume II: Identifying the World’s Top Corporate Plastic Polluters.”](#)

Four hundred and eighty-four cleanups in over 50 countries and 6 continents, organised by the Break Free From Plastic movement in September, identified the top polluting companies. The rest of the companies rounding out the top 10 polluters are Mondelez International, Unilever, Mars, Procter & Gamble, Colgate-Palmolive, Phillip Morris, and Perfetti Van Melle.

“This report provides more evidence that corporations urgently need to do more to address the plastic pollution crisis they’ve created. Their continued reliance on single-use plastic packaging translates to pumping more throwaway plastic into the environment. Recycling is not going to solve this problem. Break Free From Plastic’s nearly 1,800 member organizations are calling on corporations to urgently reduce their production of single-use plastic and find innovative solutions focused on alternative delivery systems that do not create pollution,” said **Von Hernandez**, global coordinator of the Break Free From Plastic movement.

This year’s most frequently identified companies in the brand audits – Coca-Cola, Nestlé, and PepsiCo – have offered mostly [false solutions to the plastics crisis](#), underscoring how important it is for voices from beyond the consumer goods sector to demand accountability and call for an end to single-use plastics. The list of top polluters is again filled with some of the world’s most commonly known brands.

“Recent commitments by corporations like Coca-Cola, Nestlé, and PepsiCo to address the crisis unfortunately continue to rely on false solutions like replacing plastic with paper or bioplastics and relying more heavily on a broken global recycling system. These strategies largely protect the outdated throwaway business model that caused the plastic pollution crisis, and will do nothing to prevent these brands from being named the top polluters again in the future,” said **Abigail Aguilar**, Greenpeace Southeast Asia plastic campaign coordinator.

“The products and packaging that brands like Coca-Cola, Nestlé, and PepsiCo are churning out is turning our recycling system into garbage. China has effectively banned the import of the US and other exporting countries’ ‘recycling,’ and other countries are following suit. Plastic is being burned in incinerators across the world, exposing communities to toxic pollution. We

must continue to expose these real culprits of our plastic and recycling crisis," said Denise Patel, US Coordinator for the Global Alliance for Incinerator Alternatives (GAIA).
