Update on Patrick:

We recently found out that Patrick's body is going through Liver failure. His ALT/AST are six times higher than average and his liver is enlarged and fatty. Liver damage most likely brought on by Autoimmune Hepatitis, possibly MCAS or MASTO.

There is no cure if it is caused by Hepatitis - his options are few, as he will not qualify for a new liver unless they figure out how to fix the root cause.

His heart seems to be doing ok right now. He still faints everyday but not nearly as often as we've figured out how long he can stand until he faints (4 mins)

He has no immune system so is sick often. He can not attend school full time but averages two days a week.

He will be getting a PORT and starting IV treatment two to three times a week.

Patrick will be making the trek to either Washington Childrens Hospital or Philadelphia to undergo treatments not available in Canada. He will also be part of a world wide study and research in hopes of finding a cure.

I am asked this often so I will answer. I've avoided it until now as I did not want my son to be the poster child for his story.

Was it the vaccine- the answer is YES- my boy is vaccination injured. Although our leading children's hospital is refusing to acknowledge this... he is.

The vaccine, without a doubt did this to him.

I am asking for no hate- you can't possibly make me feel any worse than I already do. I will never forgive myself. I can't change the decision I made for him but

I can start to advocate.

Patrick has been given the opportunity to choose his dream for Make a Wish so he will be working hard on figuring out his perfect wish.

Patrick is a very sick little boy. His strength inspires me. I don't think I've heard him complain even once.

I am so extremely lucky to be his mom

Also giving a shout out to my friend [Christa Jefferson](#) who has hooked us up with one of the absolute best doctors for Patrick. He has opened doors for us (he's the one helping us get to the States) and giving us treatment options Sick Kids refused.

I am thankful for ALL of you - thank you for not only listening but hearing.

COVID-19 Vaccine Spike protein attacks the liver

My 22 yr old daughter Diana was diagnosed with liver disease in March 2022 3 weeks after receiving the Pfizer vaccine. She was a vibrant healthy young lady in the Army National Guard until she fell severely ill. She has been hospitalized numerous times in Fargo, Sioux Falls, Watertown and Rochester Mn The medical team at Mayo clinic said medication is not helping and she ultimately needs a liver transplant. During her hospitalization in Mayo they also found she has right heart failure which also needs to be addressed.

“My 22 yr old daughter Diana was diagnosed with liver disease in March 2022 three weeks after receiving the Pfizer vaccine. She was a vibrant healthy young lady in the Army National Guard until she fell severely ill.” ([click here](#))

She has been hospitalized numerous times in Fargo, Sioux Falls, Watertown and Rochester MN. The medical team at Mayo clinic said medication is not helping and she ultimately needs a liver transplant. During her hospitalization in Mayo they also found she has right heart failure which also needs to be addressed.

Diana is currently bleeding gastrointestinal and needing blood transfusions about every 2-3 weeks to sustain a normal level. She is unable to work and functions at a slow pace and is on a strict low sodium diet.

Appointments begin April 3rd where she will see the cardiologist, pulmonologist and hepatologist to start tests to get cleared to be put on the transplant list.

I will be taking a leave of absence from work to be with her thru all these appointments as

we were told it will be weeks of testing. I am the sole provider for her and I drive her to all her appointments and I am known as her “support person” with all her doctors.”

A Case of Hepatotoxicity After Receiving a COVID-19 Vaccine

“A 14-year-old female, not known to have any chronic illnesses, presented to the emergency department with epigastric pain, diarrhea, nausea, and vomiting for the past four days. Three days prior to her current presentation, the patient received the second dose of the Pfizer/BioNTech BNT162b2 mRNA COVID-19 vaccine.” ([click here](#))

There have been three reports of patients having hepatic failure, with one case being acute, after receiving the Pfizer/BioNTech BNT162b2 mRNA vaccine in the United Kingdom between September 12, 2020 and September 4, 2021. Moreover, there have been 17 reported cases of liver injury

“the possible side effects of the COVID-19 vaccines on the liver are not limited to one type”

My Take...

I am doing a speaking tour right now with Dr. Paul Alexander, so I cannot comment extensively, but please read these stories carefully. These tragic stories are so important and brave parents must be supported when they come forward to tell us about their COVID-19 vaccine injured children.

Post COVID-19 vaccine autoimmune diseases are very common and they affect various organs including the liver, where the COVID-19 spike protein accumulates as well.

The Worldwide Corona Crisis, Global Coup d'Etat Against Humanity

by Michel Chossudovsky

Michel Chossudovsky reviews in detail how this insidious project “destroys people’s lives”. He provides a comprehensive analysis of everything you need to know about the “pandemic” — from the medical dimensions to the economic and social repercussions, political underpinnings, and mental and psychological impacts.

“My objective as an author is to inform people worldwide and refute the official narrative which has been used as a justification to destabilize the economic and social fabric of entire countries, followed by the imposition of the “deadly” COVID-19 “vaccine”. This crisis affects humanity in its entirety: almost 8 billion people. We stand in solidarity with our fellow human beings and our children worldwide. Truth is a powerful instrument.”
