

COVID mRNA Vaccine Injury: 31 Years Old UK Rugby Player Developed Turbo Cancer and Was Given a 200,000 GBP “Cancer Vaccine” That Didn’t Work

He died on August 27, 2024

31-year-old UK rugby player died on Aug. 27, 2024. In 2022, he collapsed in the gym and was diagnosed with a brain tumor.

- .

- .

A **rugby** player has died after he suddenly collapsed at a gym - leading him to discover he had a serious health issue.

Welsh scrum-half Calvin Nap passed away at age of 31, his former team Llandaff RFC announced on Tuesday. **The sad news came two years after he was diagnosed with a brain tumour.** The former scrum-half had initially collapsed in the gym and thought he had pulled a muscle, but scans later showed he had a tumour on the left side of his brain, reports **Wales Online.**

After going through all the chemotherapy and radiation treatment available on the **NHS**, he had been receiving an expensive new vaccine called DCVax-L, amid a huge fund-raising effort to raise £200,000 to help pay for it. The rugby union club wrote on **Facebook**: "Llandaff RFC are devastated to announce that our former player and dear friend Calvin Nap has sadly passed away.

"The fundraising effort to help pay for the vaccine, which costs £200,000 to manufacture, was set to go ahead on August 31. Named 'Napstars', the rugby community had aimed to come together to help their former player with his treatment with a day of rugby fun."

Tributes spoke of Calvin's ability to make team-mates 'feel welcome and at home' (

Fans and former staff at club spoke of their sadness today, and took to the comments section to pay tribute to the former player. One said: "Sad day today... one loving memory I have was Calvin's ability to make other team-mates feel welcome and at home, even during the short time I was part of the team. My sincere condolences to the family and the team."

Another wrote: "He was an excellent player and more importantly a beautiful, kind and decent man. Life is very unfair. Lots of love to all his family and friends". Another said: "Such devastating news. Calv was the nicest lad with the heart of a lion. Great player as well. Thoughts are with his family."

Endaf Williams, the club secretary at Llandaff, told WalesOnline: "In general he was a big part of the club. He came through all the age grades from juniors, to youth, to senior rugby. Both his brother and his father a big part of the club as well. He did a lot for the club and when he went on to run The Compound Gym, we worked with him on that as well. We are just devastated as a club to lose such a young and involved character in the club. He's got a lot of friends here, and it's just really sad."

Just a few weeks ago a fundraiser had been set up to raise the money to pay for Nap's £200,000 treatment. 'Napstars', as the club say, was meant to go ahead this weekend, and aimed to raise significant funds towards the treatment of their former player. Speaking about Nap a few weeks ago, friend and former team-mate Tom Grimes said: "He was a really good rugby player. Really talented, one of the best nines the boys have said they've ever seen. He's a scrum-half, and he's a brave player."

What Is the Dcvax-I Cancer Vaccine?

These cases can be assumed to be COVID-19 mRNA Vaccine Induced Turbo Cancer until proven otherwise.

Glioblastoma is the 2nd most common Turbo Cancer.

Mainstream Oncology doesn't recognize Turbo Cancer but is happy to profit from it, even though they are unable to treat it.

But what is the 200,000GBP Cancer Vaccine that didn't work?

[2023 Gatto et al](#) - DCVax-L Vaccination in Patients with Glioblastoma: Real Promise or Negative Trial? The Debate Is Open

"DCVax-L is a highly personalized vaccination that uses tumor lysate as a source of antigens and uses the patient's autologous dendritic cells harvested by leukapheresis and then expanded in vitro."

"The publication of the phase III study on the use of the dendritic cell vaccine DCVax-L in glioblastoma has aroused much interest in neuro-oncology"

"However, this study deserves some reflections regarding methodological issues related to the primary endpoint change, the long accrual period, and the suboptimal validity of the external control population used as the comparison arm."

“When considering PFS (progression free survival) data, the study is negative, and the trial did not reach its prospectively defined primary endpoint. Therefore, from a purely formal point of view, the study should be declared negative.”

“Furthermore, the artificial generation of the external control group resulted in impressive differences in the control population from the vaccine arm. This is a further major methodological limitation: the validity of external controls was compromised by the demographic characteristics of the comparison studies. The studies selected as an external control group had different patient characteristics, and this represents an important confounding factor.”

“The DCVax-L trial included only patients who received gross or near total resection of the tumor mass, patients with disease confined to one hemisphere, and patients who had been off glucocorticoids for at least three weeks. All these criteria inevitably represent factors capable of favorably impacting survival; however, these inclusion criteria were not present in the studies used for comparison.”

My Take...

This is a long winded way of saying the DCVax-L Cancer Vaccine Trial was rigged.

BEWARE of “new, promising cancer treatments”.

Medical Oncology is completely compromised and littered with fraud.

Not only did all Oncologists take COVID-19 mRNA Vaccines, they have denied vaccine injuries and continue to deny the phenomenon of COVID-19 Vaccine Induced Turbo Cancer.

It is a failed medical specialty with no future. It has to be rebuilt from ground zero.

But they will sell you a 200,000GBP Cancer Vaccine that doesn't work.

In the case of 31 year old Rugby player Calvin Nap, he did receive the DCVax-L Cancer Vaccine but it didn't work.

It is sad to watch Oncology be completely destroyed by incompetence, corruption and greed.

Calvin's Story

Hi, my name is Calvin Nap and I was diagnosed with a brain tumour and had conventional brain surgery on the 31st May.

On the 25th August, I was so excited to “ring” the bell at Velindre Cancer Hospital, which signaled my last treatment/session of radiation. It has been a grueling 6 weeks of radiation and chemotherapy treatments which has taken a toll on me physically and mentally. Despite my depleted physical condition, and my life being turned upside down, I will not be deterred from my goals of exploring all treatment options and especially bringing awareness to this cruel disease. Once I finish my chemotherapy treatment (6 months), I will have exhausted all treatment options the NHS has to offer.

The neurosurgeon removed as much of the tumour as possible without impairing me, I have had the maximum dose of radiation and am taking the most suitable chemotherapy drug available on the NHS. Even after all these treatments, a residual amount of cancer stem cells remain in my brain. Due to the type of brain cancer I have, there is a strong potential for the tumour to grow again and be possibly more resistive to conventional treatments. There are additional treatment options, but they are not available on the NHS.

My family, friends and I have done extensive research on treatment options, collaborated with my fantastic Oncologist and there is hope.

The DCVax-L, an immunotherapy treatment is an encouraging option. It is a personalised vaccine made from cells from my tumour (which was frozen at the time of my surgery) and my blood cells. Once the vaccine is administered, my body will take over and destroy the cancer cells. The cost of manufacturing the vaccine is £200,000, plus additional medical costs.

It is extremely important to me to bring awareness to the issue that immunotherapy is not readily available for cancer patients, who may have exhausted all treatment options the NHS has to offer. The fact that the DCVax-L and other immunotherapy treatments are not deemed cost effective by the NHS is a tragedy for all cancer and other patients. I strongly believe that costs should NOT be a deciding factor for treatments, but a quality of life for the patient and their families should BE.

Any donation you can give, no matter how small, will help to get me closer to the DCVax-L treatment I desperately need. My goal is to document my journey to a full recovery and to help and support others like me. Thank you so much for taking the time to read my story and for any kind of donation given.

The Worldwide Corona Crisis, Global Coup d'Etat Against Humanity

by Michel Chossudovsky

Michel Chossudovsky reviews in detail how this insidious project “destroys people’s lives”. He provides a comprehensive analysis of everything you need to know about the “pandemic” — from the medical dimensions to the economic and social repercussions, political underpinnings, and mental and psychological impacts.

“My objective as an author is to inform people worldwide and refute the official narrative which has been used as a justification to destabilize the economic and social fabric of entire countries, followed by the imposition of the “deadly” COVID-19 “vaccine”. This crisis affects humanity in its entirety: almost 8 billion people. We stand in solidarity with our fellow human beings and our children worldwide. Truth is a powerful instrument.”

Reviews

This is an in-depth resource of great interest if it is the wider perspective you are motivated to understand a little better, the author is very knowledgeable about geopolitics and this comes out in the way Covid is contextualized. —Dr. Mike Yeadon

In this war against humanity in which we find ourselves, in this singular, irregular and massive assault against liberty and the goodness of people, Chossudovsky’s book is a rock upon which to sustain our fight. —Dr. Emanuel Garcia

In fifteen concise science-based chapters, Michel traces the false covid pandemic, explaining how a PCR test, producing up to 97% proven false positives, combined with a relentless 24/7 fear campaign, was able to create a worldwide panic-laden “plandemic”; that this plandemic would never have been possible without the infamous DNA-modifying Polymerase Chain Reaction test - which to this day is being pushed on a majority of innocent people who have no clue. His conclusions are evidenced by renown scientists. —Peter Koenig

Professor Chossudovsky exposes the truth that “there is no causal relationship between the virus and economic variables.” In other words, it was not COVID-19 but, rather, the deliberate implementation of the illogical, scientifically baseless lockdowns that caused the shutdown of the global economy. —David Skripac

A reading of Chossudovsky’s book provides a comprehensive lesson in how there is a global coup d’état under way called “The Great Reset” that if not resisted and defeated by freedom

loving people everywhere will result in a dystopian future not yet imagined. Pass on this free gift from Professor Chossudovsky before it's too late. You will not find so much valuable information and analysis in one place. -Edward Curtin
