When we’re dealing with a controversial topic, it’s a good item to start with something we know and go from there. What is something that we know for sure about Covid-19 vaccines? They kill people.

Jon Rappoport pointed this out a year ago: “A new May 4 report by independent researcher, Virginia Stoner, reveals US vaccine-death figures. The report is titled, [‘The Deadly Covid-19 Vaccine Coverup.’](#)”

Stoner uses the US government’s own numbers.

Here are key quotes from her report:

‘There has been a massive increase in deaths reported to the Vaccine Adverse Event Reporting System (VAERS) this year. That’s not a ‘conspiracy theory’, that’s an indisputable fact.’

‘We’re talking about a huge and unprecedented increase—so massive that in the last 4 months alone, VAERS has received over 40% of all death reports it has ever received in its entire 30+year history.’

‘The increase in VAERS death reports is not due to more vaccination.’

“Most recently, the death count went from 2794 on April 5, to 3005 on April 12, to 3848 on April 26....1054 deaths in 21 days.’

‘One hypothesis...is that the elderly and infirm, many in long-term care facilities, were the first to be targeted by the COVID-19 vaccine campaign, and they are much more likely to die coincidentally. These coincidental deaths then lead to an increase in suspected vaccine-induced deaths reported to VAERS.’

‘VAERS data just does not support that hypothesis. First, because all age groups—not

just seniors—had a dramatic increase in VAERS death reports from COVID-19 vaccines...Across the board, all age groups experienced a dramatic increase in deaths reported to VAERS from the COVID-19 shots—even the under 18 group, which has had very few COVID-19 shots (so far).'

Stoner constructs a chart showing reported deaths from vaccinations in years prior to COVID, and deaths reported so far from COVID vaccines.

For prior years, we're talking about roughly 100 deaths a year from somewhere between 250 million and 350 million vaccines administered. On the other hand, we're talking about 3800 deaths from about 150 million COVID shots—not in a full year; in only four months.

The experts would say neither death figure (100 or 3800) is alarming, given the huge number of vaccines administered. But this is a deception.

Over the years, much has been written (even in the mainstream) about what sits behind REPORTED vaccine injuries and deaths. Estimates of TRUE injury numbers range from 10 to 100 times greater than the reported figures.

3800 reported deaths from COVID vaccines would skyrocket when you estimated the true figure.

As Stoner points out in her report, public health officials, in Orwellian fashion, keep repeating, 'The vaccine is safe and effective.' A straightforward analysis of their own numbers completely contradicts their stance.

Likewise, the mainstream press, politicians, corporations, and celebrities are on an all-out push to convince the public that the vaccine is a) necessary and b) a marvel, if only the 'hesitant' people would 'follow the science' and see the light.

Well, some cults are small; that one is huge.

Virginia Stoner's report is a stark refutation of the conspiracy theory the cult is promoting.

When the entire population is being subjected to a vast experiment deploying a never-before-released RNA technology; when the shot in the arm is actually a genetic treatment; when the entire field of genetic research is riddled with pretense and lies and alarming miscalculations, leading to ripple effects in overall genetic structures; what else would you expect?

You would expect exactly what Stoner's report shows and implies. [The COVID vaccine is a building disaster.](#)"

Vernon Coleman asks the appropriate question: exactly how many people has the Covid vaccine killed? "No one knows how many people the vaccines are killing - or how many they will kill.

But although I haven't seen the mainstream media mention most of these deaths, people have already died or been injured after being given the vaccine:

SHOCKING - The latest covid jab [deaths and injuries from VAERS](#) (infants, teenagers and young adults are dying after the vaccine)

openvaers.com covid data (it is estimated that only 1% of vaccine adverse events is reported)

Note: The following paragraph has now been added to the UK's Pfizer analysis data print, 'A report of a suspected ADR to the Yellow Card scheme does not necessarily mean that it was caused by the vaccine...' In my view, this is yet another attempt to draw attention away from the very real problems associated with the vaccines. We note that when patients die 60 days after a positive covid test, they are added to the covid death figures but if someone were to die 60 minutes after a covid vaccine, then it is just a coincidence.

[PFIZER \(UK data\)](#) – Some of the Injuries include: strokes, heart attacks, miscarriages, Bell's Palsy, sepsis, paralysis, psychiatric disorders, blindness, deafness, shingles, alopecia and covid-19.

The following paragraph has now been added to the UK's AstraZeneca analysis data print, 'A report of a suspected ADR to the Yellow Card scheme does not necessarily mean that it was caused by the vaccine...' In my view, this is yet another attempt to draw attention away from the very real problems associated with the vaccines. We note that when patients die 60 days after a positive covid test, they are added to the covid death figures but if someone were to die 60 minutes after a covid vaccine, then it is just a coincidence.

You might wonder, even if the Covid-19 vaccine kills people, doesn’t it also save lives? But in fact it is ineffective in warding off the so-called Covid “pandemic.” Vasko Kohlmayer says, “Pfizer and BioNTech’s Covid-19 vaccine is just 39% effective in Israel where the delta variant is the dominant strain according to a new report from the country’s Health Ministry’ we read in [a CNBC report](#).

Astonishment is one’s first reaction when coming across this piece of information, since it was not so long ago the vaccine manufacturers claimed their products were 92 to 98 percent effective.

The manufacturers’ initial claims, however, have been steadily revised down as real-world data has been coming in. In March of this year [news](#) came from South Africa that ‘AstraZeneca vaccine doesn’t prevent B1351 Covid.’ A couple of months later, the Hill ran [a piece](#) by a Baylor School of Medicine virologist who observed:

‘A new study published in the New England Journal of Medicine found that Pfizer-BioNTech vaccine provides only 51 percent protection against B.1.351 of South Africa.’

Just a couple of weeks ago, [we learned](#) that recipients of the Sinovac Biotech’s vaccine have no antibodies after six months. This effectually means that merely half a year after being injected into people’s bodies the vaccine has zero percent efficacy in protecting against Covid-19.

Even factoring for the variants, the hard data makes it quite clear that the initial claims of vaccine effectiveness were greatly exaggerated. This, of course, comes as no surprise to anyone familiar with the dynamic of the pharma industry. Drug manufacturers tend to wildly overstate the efficacy of their products, while doing their very best to understate their side effects. It is for this purpose they conduct trials that are manipulated to obtain the results they wish for. Sadly, they too often get away with it because of the corruption of the system by what is called *regulatory capture*. This is why the outcomes of manufacturers’ trials are almost never replicated by independent trials or real-world data.

This is what has apparently happened with the Covid vaccines. The manufacturers used the sense of emergency brought on by the Covid pandemic to conduct rushed and incomplete

trials which were designed to yield the results they wanted to see. There is every reason to believe that the effectiveness of their injections was nowhere close to the 92-98% range they initially claimed even for the variants that were in circulation at that time.

Needless to say, one has a strong suspicion that even the meagre 39 percent figure is still overstated. This would only be natural, since everyone involved in the vaccination enterprise – the manufacturers, politicians, regulators, the medical establishment and corporate scientists – is trying their best to save face and reputation in the face of this fiasco. Bad though the data is, we can be quite sure that it has been massaged to soften the blow.

You can clearly observe this tendency at work in the CNBC piece which claims that even though Pfizer is only 39 percent effective, it still protects against serious disease. But this is simply not true, which you can easily see if you take the trouble to look into the data put out by the Israeli government. At roughly the same time that CNBC filed its report, the Israeli Ministry of Health published a bulletin which reported on Covid cases in the country. According to their data, there were 137 serious cases in Israel of which 95 were fully vaccinated and 42 unvaccinated or partially vaccinated (see [here](#) and [here](#)). In other words, the bulk of the serious cases was comprised of those who had received their shots. If the vaccine was as effective in protecting against heavy illness as the article claims, the numbers would look completely different. The figures published by the Israeli Ministry of Health shows that the claims of Pfizer's efficacy of protecting against serious Covid are simply untrue.

This has been confirmed by the testimony of Dr Kobi Haviv, Director of Herzog Hospital in Jerusalem. In a [recent TV interview](#), Dr Haviv stated that the fully vaccinated people account for about 90 percent of hospitalizations. Given that less than 90 percent of the Israeli population is fully vaccinated, it would appear that the vaccination not only does not prevent you from contracting the disease, but actually increases one's chances of becoming a serious Covid case. Observes Dr Haviv: 'yes, unfortunately, the vaccine... as they say, its effectiveness is waning.' And so it is, indeed. Dr Haviv's interview is on YouTube so you can hear the truth straight from his mouth. It will be interesting to see how long it will take for the Establishment Censors to take it down." See [this](#).

But there is worse. Everybody knows how sensitive and delicate small children are. Now the monsters want to give them the killer jab too! Let's listen to Kohlmayer again:" "CDC recommends COVID-19 vaccine boosters down to age 12,' says a recent CBC news [headline](#).

The article opens as follows:

'Millions of Americans between the ages of 12 and 15 can now get a booster shot of Pfizer's COVID-19 vaccine, after the CDC formally adopted new recommendations backed by a majority of the agency's outside vaccine advisers. The CDC now says that Americans as young as 12 who received Pfizer's COVID-19 vaccine should receive a third dose as early as five months after their first two shots. The agency's officials said that enough time has passed for around 5 million adolescents to be eligible'

'Why in the world are they doing this?' one asks in disbelief.

Three basic facts have been well established by data and studies:

1. Healthy children are at virtually zero risk of serious Covid.

2. The vaccines will not prevent children from contracting the virus.
3. Covid injections carry risk of serious side effects.

According to [a cost-benefit analysis](#) conducted by Toby Rogers, Ph.D., in the 5 to 11 age range, 117 healthy kids will have to die of vaccine-related side effects in order to save one child from perishing of Covid 19.

A [study from Japan](#) has shown that young people are seven hundred percent more likely to be killed by Pfizer jabs than by Covid.

We have been repeatedly told that we must follow facts and science when dealing with this pandemic.

The science on vaccinating children against Covid-19 is in, and it could not be any clearer: while healthy children are at negligible risk from the disease itself, they are at real risk from the shots.

Since the vaccines do not stop infection and transmission, they will protect neither children nor their communities from the spread of the virus.

It makes not scientific or medical sense to give them these shots. Vaccinating children for SARS-CoV-2 violates both the tenets of good medicine and evidence-based science.

According to Dr Robert Malone, who is one of the world's preeminent vaccine scientists, the cost benefit analysis [is not even close](#).

Those who want to vaccinate children follow neither the science nor logic. Subjecting children to Covid jabs needlessly exposes young lives to potentially grave risks.

The incidence of myocarditis and pericarditis may be as high as [1 in 317](#) in the young, especially boys, and [increases further](#) with each additional dose.

Then there is a danger of deadly blood clots as well as several other serious conditions such as Guillain-Barré syndrome.

Astonishingly, scores of children have already been injected with two doses that turned out to be ineffective, which is the reason a booster is now required.

The booster, however, already looks to be even more useless than the original offering. The booster, in fact, appears to have [negative efficacy](#) which means that those who receive it seem to be more likely to contract the virus.

Soon we will have a multitude of 12-year-olds who will have received three of these pointless and dangerous shots without any medical justification whatsoever.

Robert Kennedy, Jr. said that injecting children with the Covid vaccines is a crime. He is not incorrect.

A number of children have already been [killed](#) by the vaccines.

Some of the newly vaccinated children will develop serious conditions and some of them will die. [The lives of these healthy children will be cut short for no good reason](#) and their parents

will be beside themselves with grief.”

We must do everything we can to stop them before they kill more. If we act on what we know, we can stop these demonic monsters.
