

Are Directed Energy Weapon (DEW) and HAARP Experiments Being Ratcheted Up Worldwide?

Are unconventional weapons being actively demonstrated to warn Russia and China to remain 'within boundaries'?

According to [Wikipedia](#), in

“early August 2023, a series of wildfires broke out in the U.S. state of Hawaii, predominantly on the island of Maui. The wind-driven fires prompted evacuations, caused widespread damage, killing at least 115 people and leaving 388 others missing in the town of Lāhainā.”

Residents of Maui are recounting another, more [fiendish account](#) altogether. They do not agree with the official casualty toll either.

I have watched various images and commentary-laced video clips of this strange event and concede that they can be attributed to Directed Energy Weapons (DEW). I was sceptical of DEW capabilities until the Maui incident.

The US [Government Accountability Office](#) (GAO) describes DEW as

“concentrated electromagnetic energy to **combat enemy forces and assets**. These weapons include high energy lasers and other high power electromagnetics—such as millimeter wave and high power microwave weapons...If a greater amount of force is required, DEWs can also damage or destroy enemy assets. To do this, a high energy laser can emit electromagnetic energy with a wavelength the target material absorbs most effectively, **melting the material**.” The GAO summary also adds that **high energy lasers...are “capable of melting steel”**. (bold added for emphasis)

Now that we have broadly established the capabilities of DEW, is there any evidence of its deployment in Maui?

Well, we have seen an uncanny series of fires, explosions and train derailments all across the Western world after the global coronapsychosis had breached its credulous limits and scepticism began to creep in. These strange incidents curiously impacted [infrastructures](#) and [warehouses](#) (and the materials therein) that are vital to societal survival e.g. fuel, food and medicines. I can't even begin to recall the number of such incidents that have taken place over the past 12 months alone. Search engines, as we all know, are now solely designed to promote the rancid narratives of the global fakestream media.

When it comes to the anomalies encountered in Maui, [Peggy Hall](#) has an excellent post that encapsulates the logic-defying tragedy. I agree with Hall that a lot of things just "don't add up."

According to Hall, the

"photographic images depict obliterated structures and molten metal, while the surrounding vegetation, including grass and trees, remains relatively unscathed, and wooden picnic tables are still standing... Strangely, the ships were on fire in the middle of the ocean as well. Images from this fire are mostly in line with what you would expect to see after a bomb or with the notion that a directed energy weapon was responsible."

But it is not just in Hawaii or the United States where incendiary events have broken out over the past 12 months. And I am not entirely convinced of the theory that an entire enclave on a Hawaiian island was deliberately razed to make way for 15-minute smart cities that align with the White House-World Economic Forum (WEF) agenda of "[Build Back Better](#)". There are enough adjacent spaces around to pull this off. This is the primary reason why I held off from commentating on this subject. Till now, that is...

Maybe, there is another agenda afoot? I needed more anecdotal evidence to support a theory that had been germinating in my mind. Last night, I stumbled upon one such corroborative incident. I am now going out on a limb here.

It seems fires and earthquakes have been breaking out all over China - right after it was subjected to a series of devastating floods. I am still sceptical of a High-frequency Active Auroral Research Program (HAARP) aka "weather warfare" [weapon](#) at work here but that scepticism is dwindling by the day.

According to a [China Insights](#) video clip, blazing fires have broken out across major cities in the mainland. And when I say blazing fires, I mean they are literally blazing in an eerily artificial manner. New, highrise buildings that are supposedly fire resistant are now behaving like fiery giant concrete candles.

Here I need to propose my somewhat radical hypothesis. The operationalization and deployment of DEW, HAARP and biological weapons - to the extent they are real - are designed to remind US military rivals, namely Russia and China, to remain "within boundaries" while the pillars of global governance are erected on a hellish foundation of scarcities, famines, "natural disasters", supply chain breakdowns and hunger worldwide.

Incidents like the one witnessed in Maui are not just technological demonstrators but they also serve as an avenue to perfect these weapons systems.

What do you think? Does the US military have the capability to bring Russia and China to keel with their unconventional weaponries?
