In-depth Report: [THE H1N1 SWINE FLU PANDEMIC](#)

I am making a plea to everyone who reads this, please, please DO NOT TAKE ANY VACCINE THAT IS PURPORTED TO 'PREVENT' THIS FLU.

Remember 1976 and the so called Swine Flu outbreak that was purported to be a coming pandemic? It only infected recruits at Ft. Dix. Why? Because I believe that the so called Swine Flu virus infected the recruits due to the vaccines they were given. Whether the government developed the Swine Flu 1976 virus and infected the recruits as a means to test the public to see if people would comply with a call to take vaccination against Swine Flu, or the recruits became infected via contaminated vaccine they were given as part of the recruit regimen, that outbreak was as phony as they come. I was one of the people duped into taking a Swine Flu shot and it made me so sick. I was sick in bed for three months after taking the vaccine.

Do not take seasonal flu vaccine if you are told that it could help prevent this brand new Swine Flu variant. It won't do a thing to prevent this flu. What it will do is serve up new genetic material to the Swine Flu virus that I have dubbed Spanish Flu 2, the Sequel. The Spanish Flu variant will use the gene sequences in the vaccine in humans to develop more of the changes that make the virus more readily infect humans. We do not want to give this virus more human genetic material so that it will infect humans more readily person to person. This is what vaccinated individuals do for pandemic strains.

There is also a safety issue in any experimental vaccine, much like the one in 1976. Some people even feel that such a vaccine for pandemic strain might require more than one vaccination which could actually be a binary set up. The first shot might just add some genetic code that stays dormant in the body until one gets the second vaccine shot which then serves to only cause infection. It could trigger Guillain-barre syndrome, Typhus or some other condition.

An Influenza vaccine does not protect or prevent a person from contracting flu. It is purported to, maybe, prevent some complications of flu and maybe shorten duration. I am not even sure it does that. Personally, I feel the vaccine weakens our immune system and also sickens us due to contaminants in the vaccine. I feel that people can better protect themselves by washing hands often and thoroughly. People should also use protective gloves when out and about during epidemics. Don't be afraid of "looking odd." I would not

be ashamed to use a mask and gloves. I see that the Mexicans are using them.

A big problem during a pandemic is that these simple supplies will become extremely scarce awfully quickly. Stock up now. Medical supplies. personal hygiene supplies and don't forget fido, or any other pet. Once a pandemic hits, it will be too late to stock up. Water, too.

We may lose clean water and electric power, so be prepared.

So, please, people, DON'T TAKE ANY VACCINES OFFERED. THEY COULD KILL YOU BEFORE ANY VIRUS KILLS YOU.
