In-depth Report: [Election Fraud in America, U.S. Elections](#)

Rampant Evidence of Electronic Vote Tampering

[Ron Paul supporters](#), [progressives](#) and the [mainstream media](#) have all discussed the potential for vote fraud.

A global internet voting company headquartered in Spain recently [purchased America's dominant election results reporting](#) company.

The Wall Street Journal wrote in a 2008 article entitled "[Will This Election Be Stolen?](#)":

And then there are the e-voting machines. Since early voting started recently, worried voters have reported seeing their votes flipped from Barack Obama to Mr. McCain in West Virginia and Texas.

We reported in 2006:

The non-partisan and highly-respected government agency, the Government Accountability Office, [verified that the electronic voting machines used in 2004 were wide open to fraud, and that fraud likely occurred in Ohio, Iowa, Nevada, New Mexico, and other states.](#)

The [security flaws in electronic voting machines](#) are so complete that anyone can instantaneously install software which will change the vote counts. See this [New York Times' Magazine analysis](#), and also [E-Voting Machine an Easy Hack](#) from Wired Magazine.

Exit polling data shows that [there was vote fraud](#).

And [Robert F. Kennedy Jr.](#) and leading reporter [Greg Palast](#) have shown that the emperor's cronies intentionally spoiled, rejected, purged and otherwise refused to count enough ballots to take the election away from Kerry (not that I like Kerry). See also [this article](#).

Moreover, And spend 10 minutes at [this website](#) and you'll realize that electronic vote fraud is not some raving conspiracy theory, but is real.

Indeed, the following headlines from the last two weeks hint at the magnitude of the fraud:

- [Ohio Election Workers Sentenced to 18 Months for Rigging 2004 Presidential Recount; Judge Says He Believes the Conspiracy Goes Higher...](#)

- [Ohio Secretary of State confirms 2004 election could have been Stolen](#)
- [CNN gives e-voting an 'F' Grade](#)
- [Programmer was asked to help rig Florida election](#)
- Black Box Voting - one of the most credible organizations investigating voting issues - has received unofficial reports that [political operatives have urged citizens NOT to ask too many questions and NOT to take photos or video of precinct caucus results, warning them that only "conspiracy theorists" would want to independently confirm the announced results.](#)

In this 2012 election, reports of electronic vote fraud are now pouring in from both liberal and conservative sources:

([Source](#); [Update](#))

["Experimental" software patches](#) on Ohio voting machines may [sway the vote](#).

And Steve Watson [notes](#):

Multiple reports of electronic voting machine irregularities have begun to pour in from all over the country as Americans take to the polls today.

Voters in Hamilton County Indianapolis were forced to wait for 30 minutes to begin voting because the machines were not working when the polling station opened.

[The AP reports](#) that "cards used to clear tallies from machines before voting begins were improperly programmed," meaning that around 500 machines had to be "reset".

[The Toledo Blade](#) reports that some 100 voters were unable to cast ballots this morning in Bedford, Ohio, because a voting machine was not working. Officials said that a memory card had to be replaced. Long lines led to people walking away.

[In Dubuque, Iowa](#), more voters were delayed when machines failed to operate for around 45 minutes after the polling station opened.

[Reports from across North Carolina](#), one of the key swing states, are pouring in suggesting that voting machines are flipping votes from one candidate to the other.

In Greensboro, "a voter complained that they tried to vote for Mitt Romney three times but that the ballot cast was instead for Barack Obama. Other voters in Guilford County and in some other parts of the state said they experienced similar issues."

[In Charlotte](#), another voter reported the same problem.

In Rehoboth, Massachusetts problems with voting machines were also noted. The machines officials are using are 14 years old, according to the report. Problems were also reported in **Tewksbury, Massachusetts**.

In Milford Township, Pennsylvania, three voting machines stopped working after just one hour of voting. After a technician got them working again, one of them broke down a second time, causing waiting voters to begin discussing their distrust of the machines and the potential for voter fraud.

In Crawford County, problems with machines were also reported. They had not been set to the correct time, so were unable to be used for a short period of time.

In Missouri, the Secretary of State's office has been forced to respond after numerous voters claimed that machines were flipping votes for Romney to votes for Obama.

In Pittsburgh, voters have reported multiple problems with voting machines.

In Sandy Springs, Georgia, hundreds of people were delayed when voting machines went down at around 11 a.m.

In Nashville, Tennessee, technical issues with the machines were reported by many voters, while in **Chattanooga**, machines malfunctioned, meaning some voters had to put their ballots in the machine without them being scanned.

In Fredericksburg, Northern Virginia, hundreds of voters were turned away as all of the electronic voting machines at one polling station failed to operate. Polling workers only had 50 paper ballots available. Worse still, some voters who used the machines were told that their votes would not count if they had placed them before 8am.

In Spartanburg County, South Carolina, voting machines have failed to work all day and election officials have twice run out of paper ballots.

In Faulkner County, Arkansas, machines were reported inoperable.

Some areas in Virginia reported voting machine problems.

Voters in California have complained that voting machines switched their votes for Obama to Romney.

Last week this same problem was reported in **six other states**.

In Ohio, **a lawsuit has been filed** following the installation of software into voting machines by the state that experts say could allow "back door" vote manipulation by non-election board officials.

Green Party candidate Robert J. Fittrakis **filed papers yesterday** in federal court in Columbus, seeking an order blocking the use of the machines and the software in vote counting. Named as defendants in the case are Ohio Secretary of State Jon Husted and Omaha, Nebraska- based Election Systems & Software Inc.

As we have routinely reported during elections, electronic voting machines have caused significant problems. Many **security experts are adamant** that the machines can easily be hacked, and **past cases** have shown that vote

fraud has been facilitated by the use of electronic voting machines.
