

Fukushima: Japanese Government Guilty of Destroying Pacific Ocean

The Japanese Government has been ordered to pay tens of millions in compensation after it was found guilty of negligence causing the Fukushima nuclear disaster. Reports also claim that the ruling could also include other pacific nations like the US who could also be eligible for compensation from the Japanese government who has effectively poisoned the entire Pacific Ocean and damaged the world's food chain beyond repair. YNW reports: The nuclear plant operator, Tokyo Electric Power Co. Holdings, was also found guilty of negligence that led to the disaster that nuclear experts say will likely continue affecting wildlife and humans for the next 250,000 years.

Friday's stunning ruling by the Maebashi District Court was the first to recognize negligence by the state and Tepco. Previously the Japanese government and Tepco, a subsidiary of General Electric, had strongly denied any wrongdoing, arguing they were the victims of bad luck. The judge called the massive tsunami "predictable" and said the major nuclear disaster, which is responsible for 300 tons of radioactive water entering the Pacific Ocean every single day, could have been avoided. According to Japan Times:

The district court ordered the two to pay damages totaling ¥38.55 million to 62 of 137 plaintiffs from 45 households located near the plant, which suffered a triple meltdown caused by the tsunami, awarding ¥70,000 to ¥3.5 million in compensation to each plaintiff. The plaintiffs had demanded the state and Tepco pay compensation of ¥11 million each — a total of about ¥1.5 billion — over the loss of local infrastructure and psychological stress they were subjected to after being forced to relocate to unfamiliar surroundings.

Citing a government estimate released in July 2002, the court said in the ruling that

"Tepco was capable of foreseeing several months after (the estimate) that a large tsunami posed a risk to the facility and could possibly flood its premises and damage safety equipment, such as the backup power generators."

It pointed out that the state should have ordered Tepco to take bolstered preventive measures, and criticized the utility for prioritizing costs over safety. Fukushima radiation has contaminated the entire Pacific Ocean. The nuclear disaster has contaminated the world's largest ocean in only five years and it's still leaking 300 tons of radioactive waste every day. According to a True Activist report:

Radioactive Debris from Fukushima approaching North America's western coast.

If that weren't bad enough, Fukushima continues to leak an astounding 300 tons of radioactive waste into the Pacific Ocean every day. It will continue to do so indefinitely as the source of the leak cannot be sealed as it is inaccessible to both humans and robots due to extremely high temperatures. It should come as no surprise, then, that Fukushima has contaminated the entire Pacific Ocean in just five years. This could easily be the worst environmental disaster in human history and it is almost never talked about by politicians, establishment scientists, or the news. It is interesting to note that TEPCO is a subsidiary partner with General Electric (also known as GE), one of the largest companies in the world, which has considerable control over numerous news corporations and politicians alike. Could this possibly explain the lack of news coverage Fukushima has received in the last five years? There is also evidence that GE knew about the poor condition of the Fukushima reactors for decades and did nothing. This led 1,400 Japanese citizens to sue GE for their role in the Fukushima nuclear disaster - and now have been found guilty.

Even if we can't see the radiation itself, some parts of North America's western coast have been feeling the effects for years. Not long after Fukushima, fish in Canada began bleeding from their gills, mouths, and eyeballs. This "disease" has been ignored by the government and has decimated native fish populations, including the North Pacific herring. Elsewhere in Western Canada, independent scientists have measured a 300% increase in the level of radiation. According to them, the amount of radiation in the Pacific Ocean is increasing every year. Why is this being ignored by the mainstream media? It might have something to do with the fact that the US and Canadian governments have banned their citizens from talking about Fukushima so "people don't panic."

Further south in Oregon, USA, starfish began losing legs and then disintegrating entirely when Fukushima radiation arrived there in 2013. Now, they are dying in record amounts, putting the entire oceanic ecosystem in that area at risk. However, government officials say Fukushima is not to blame even though radiation in Oregon tuna tripled after Fukushima. In 2014, radiation on California beaches increased by 500 percent. In response, government officials said that the radiation was coming from a mysterious “unknown” source and was nothing to worry about. However, Fukushima is having a bigger impact than just the West coast of North America. Scientists are now saying that the Pacific Ocean is already radioactive and is currently at least 5-10 times more radioactive than when the US government dropped numerous nuclear bombs in the Pacific during and after World War II. If we don't start talking about Fukushima soon, we could all be in for a very unpleasant surprise.
