Unlike Pepsi Co, which recently [got let loose](#) from a class action lawsuit concerning a carcinogen used in soda, **a class action lawsuit against the maker of Cheerios, Yoplait yogurt, and Pillsbury cinnamon rolls was just certified by a federal judge.**

Minneapolis residents claim that General Mills [polluted their air and water](#) with more than 15,000 gallons of carcinogenic solvents that have seeped into homes.

General Mills (GM) makes [hundreds of foods](#) that most Americans are used to eating on a daily basis, but the company obviously has little concern for the health of the mouths they make millions from.

Plaintiffs in the class action suit claim that GM released trichloroethylene - a chemical used to extract vegetable oils from plant materials - into the area around its former facility in Minneapolis. The company disposed approximately 15,000 gallons of chemical solvents into the air and water supply.

Dr. Lorne Everett, an expert for the citizens of Minneapolis states that:

“[GM disposed of] large quantities of toxic chemicals, including [trichloroethylene] TCE, at the facility, has resulted in widespread soil vapor contamination.”

GM is blaming it on other nearby facilities, in a typical Big Food ‘it wasn’t me’ defense, as well as saying household solvents were the cause - indeed - for 15000 gallons of chemical, carcinogenic solvents.

GM has had to investigate the quality of the air, water, and soil around its facilities before due to concerns of toxicity.

GM also knowingly disposed of [1,000 gallons of](#) laboratory solvents and other chemical wastes at its technical research property. In 1980, General Mills sold the property to the Henkel Corporation, which ceased operation in 1985.

In the recent past, mega-corporation General Mills was forced to remove the label “100% Natural” from more than 20 of its products, including its Nature Valley snack bars and crispy squares. The company was trying to market and sell their product as being ‘natural,’ when in fact they were chock-full of toxic, non-natural ingredients. Just another example of how

GM lacks any regard for the population.

[At least 200 homes](#) have allegedly been compromised by the latest GM chemical dumping.
