In this video, Dane Wigington gives a presentation in Northern California on the harmful effects of Geoengineering, declaring that this is among the most important issues affecting humanity.

The very essentials needed to sustain life on earth are being recklessly destroyed by these programs.

This is not a topic that will begin to affect us in several years, but is now already causing massive animal and plant die off around the world, as well as human illness.

<http://GeoEngineeringWatch.org>

The debate over whether geoengineering programs are going on is now a moot point.

We have more than enough data to confirm it. We have actual footage showing tankers spraying. The materials showing up on the ground are exactly the same materials mentioned in the numerous geoengineering patents and documents. Visit our website for a list of these government patents and documents.

Our skies today are simply not normal. Upon examination this cannot be denied. They are filled with nanoparticulates of heavy metals. But the skies have been filled with grid patterns for so long now that we are used to them and do not see them anymore. Sadly, the fact is that people do not look up.

To be clear, what we are seeing is not cloud seeding to increase rainfall. These particulates are designed to block the sun and move the jet stream. Dane explains how this is causing the drought and deluge being experienced around the globe.

Our atmosphere is nothing but a massive physics lab to geoengineering scientists who have no concern whatsoever about the consequences to humanity or any living thing, including themselves. The experiments are literally tearing the planet apart and destroying life on earth.

Dane reports, among other things, on:

- Geoengineering related climate disruptions, extreme drought and deluge
- Ozone depletion
- Methane release
- Drastic reduction in arctic sea ice
- Global oxygen content reductions
- Oceans on the brink of collapse
- Massive fish die offs
- 200 species becoming extinct every single day
- A drastic rise in Autism, Alzheimer's, and Dementia
- Crisis level forest reductions
- The sterilization of soils making it impossible for plants to grow without Monsanto's aluminum resistant seeds

Dane Wigington presents hard data which reveals what these catastrophic programs have done to our planet to date and what they will do if they are allowed to continue.

Please take the time to watch this video, follow up with some investigation of your own on our site: <http://www.geoengineeringwatch.org>, and share this information far and wide.

Dane Wigington

"I began study and research on meteorology and atmospheric change in the late 90's. After moving to Shasta County Cal. in 2001 and building one of the largest "off grid" solar homes in Northern California, I took notice of the of the sporadic aircraft "trails" and "grid patterns" that were blocking ever increasing amounts of my homes solar charging capacity (sometimes up to 80%).

Subsequent research led me straight to the subjects of SAG (stratospheric aerosol geoengineering) and SRM (solar radiation management). I began lab testing of rain samples on a consistent basis. The skyrocketing toxicity of once pristine rainfall over the Pacific Northwest was shocking. Massive and ever escalating quantities of the exact heavy metals called for in numerous geoengineering patents were present in all samples tested at Northern California's state certified lab. I witnessed a stark and accelerating tree mortality along with insect and amphibian decline. Years of continuing research have left me with the following conclusion, the threat posed by geoengineering, both immediate and long term, cannot be overstated. I have spent the last decade dedicated to researching and exposing the long list of dire consequences related to the ongoing atmospheric spraying programs."
