

Government Advisor Admits Masks Are Just “Comfort Blankets” that Do Virtually Nothing

“But now it is entrenched, and we are entrenching bad behaviour.”

As the UK Government heralds “freedom day” today, which is [anything but](#), a prominent government scientific advisor has admitted that face masks do very little to protect from coronavirus and are basically just “comfort blankets”.

Dr Colin Axon, a SAGE advisor for the government told the [London Telegraph](#) that medics have given people a “cartoonish” view of how microscopic viruses travel through the air, and the masks have gaps in them that are up to 5000 times bigger than Covid particles.

“The small sizes are not easily understood but an imperfect analogy would be to imagine marbles fired at builders’ scaffolding, some might hit a pole and rebound, but obviously most will fly through,” Axon said.

“Once a particle is not on a biological surface it is no longer a biomedical issue, it is simply about physics. The public has only a partial view of the story if information only comes from one type of source,” Axon continued, adding “Medics have some of the answers but not a whole view.”

Noting that the “mask debate is about the particle journey,” Axon explained that “Masks can catch droplets and sputum from a cough but what is important is that SARS CoV-2 is predominantly distributed by tiny aerosols.”

“A Covid viral particle is around 100 nanometres, material gaps in blue surgical masks are up to 1,000 times that size, cloth mask gaps can be 500,000 times the size,” Axon urged.

The professor noted that

“those aerosols escape masks and will render the mask ineffective,” adding “The public were demanding something must be done, they got masks, it is just a comfort blanket. But now it is entrenched, and we are entrenching bad behaviour.”

“All around the world you can look at mask mandates and superimpose on infection rates, you cannot see that mask mandates made any effect whatsoever,” Axon further noted, adding that “The best thing you can say about any mask is that any positive effect they do have is too small to be measured.”

Axon’s comments echo those of **Dr. Anthony Fauci**, who [wrote in February 2020](#) that a typical store-bought face mask “is not really effective in keeping out virus, which is small enough to pass through material.”

Fauci later reversed his position after the CDC began recommending that Americans wear face coverings. Similar recommendations were then made worldwide, with World Health Organisation officials even recommending that [masks remain INDEFINTELY](#).

Social media networks have long censored and deleted information pertaining to the efficacy of masks, or lack thereof, despite numerous credible studies concluding that they are largely useless at stopping the spread of COVID-19.

A study in Denmark involving 6,000 participants found that “there was no statistically significant difference between those who wore masks and those who did not when it came to being infected by Covid-19,” the [Spectator reported](#).

“1.8 per cent of those wearing masks caught Covid, compared to 2.1 per cent of the control group. As a result, it seems that any effect masks have on preventing the spread of the disease in the community is small.”

While the government says that from today masks are optional in the UK, many train companies and other businesses have said that they remain mandatory, causing widespread confusion.
