In-depth Report: [THE H1N1 SWINE FLU PANDEMIC](#)

The great swine flu hoax of 2009 is now falling apart at the seams as one country after another unloads hundreds of millions of doses of unused swine flu vaccines. No informed person wants the injection anymore, and the entire fear-based campaign to promote the vaccines has now been exposed as outright quackery and propaganda.

Even doctors are now calling the pandemic a complete hoax. As reported on FoxNews, Dr. Wolfgang Wodarg, a leading health authority in Europe, says that [drug companies](#) “organized a ‘campaign of panic’ to put pressure on the World Health Organization (WHO) to declare a [pandemic](#). He believes it is ‘one of the greatest [medicine](#) scandals of the century,’ and he has called for an inquiry.” (<http://www.foxnews.com/story/0,2933...>)

H1N1 [swine flu](#) was never dangerous, and it never should have been escalated to a level-six pandemic in the first place. It was all a big marketing [scam](#) whose purpose was to simply sell [vaccines](#). (And the CDC and WHO were in on it...)

And it worked! [Big Pharma](#) made out with billions of dollars in profits for a useless vaccine that’s now being dumped by the truck load. These vaccines were, of course, paid for with taxpayer dollars, making the Great Swine Flu Hoax of 2009 nothing more than an elaborate financial scam whose goal was to transfer wealth from the People to the shareholders of Big Pharma.

In just the fourth quarter of 2009, GlaxoSmithKline shipped \$1.4 billion worth of vaccines. (<http://www.reuters.com/article/idUS...>)

That’s \$1.4 billion worth of taxpayer dollars, by the way. Dollars that could have been spent on nutrition or real [health](#) education. \$1.4 billion worth of free vitamin D supplements would have done far more to protect public health than vaccines could ever hope to accomplish.

A bailout for Big Pharma

Wall Street hucksters have nothing on Big Pharma, the [CDC](#) and the WHO, all of which conspired to mislead the public and generate irrational fear in order to make money selling people vaccine shots they never needed in the first place.

The drug companies raked in billions of dollars in revenues while providing a product that offered absolutely no net reduction in mortality. In fact, as the long-term side effects of the vaccines remain unknown, it could turn out that the vaccines actually result in a net increase in mortality.

Meanwhile, countless people were harmed by the swine [flu vaccine](#) frenzy (it's "countless" because nobody's counting). In addition to those who were nearly paralyzed after receiving the vaccine shots, grade school students in Massachusetts who lined up to receive swine flu vaccine shots were instead injected with insulin. (Insulin injections can put you into a coma.) (<http://www.washingtonpost.com/wp-dy...>)

The school sent a letter home to students blaming the mishap on the school nurse. But if they weren't injecting these kids with a useless vaccine for a non-pandemic, none of this would have happened in the first place.

Total swine flu deaths for 2009 were far lower than the number of deaths from regular seasonal flu. And yet it turns out that thousands of Americans who died from the swine flu had been previously injected with the vaccines (http://www.naturalnews.com/027956_H...). In fact, according to calculations derived from official CDC estimates, thousands of vaccinated Americans died from swine flu anyway. The vaccines, it seems, don't really work after all. You're just as safe doing nothing.

Actually, getting the vaccine may harm your health. Outspoken Dr. Wodarg even says that the full extent of the damage from the insufficiently-tested vaccines may not be known for years. "The vaccine developed by Novartis was produced in a bioreactor from cancerous cells, a technique that had never been used until now," he says.

Just what we need, huh? Cancer cells being injected into the population as part of a vaccine campaign.

Cancelling vaccine orders

The Swine Flu hoax has fizzled out, and countries like Greece, France and the UK have cancelled orders for vaccines that they now realize won't be needed. (<http://www.reuters.com/article/idUS...>) (<http://news.bbc.co.uk/2/hi/health/8...>).

But even the fizzling of this hoax doesn't mean it was a failure from the point of view of Big Pharma.
