The following text are selections from an incisive report by London's Daily Mail which reveals the fraud and political complicity behind the Covid crisis which has literally paralyzed the institutions of civil society in more than 190 countries, in the course of more than two years.

The report focusses on how US government agencies led by Dr. Anthony Fauci, et al. were instrumental in the closure of schools across America. This action constitutes a crime against humanity and a crime against our children.

This article by the Daily Mail confirms what the independent media (including Global Research) has been publishing from the very outset of this crisis.

What this article suggests is that the instruments of censorship and so-called "fact checking" are in crisis.

The truth is being revealed. Our thanks to the Daily Mail for having brought this report to our attention.

Michel Chossudovsky, Global Research, July 19, 2022

Two of America's top health agencies are reportedly hemorrhaging staff as poor decision-making, described by staff as 'bad science,' has led to low morale.

The Centers for Disease Control and Prevention ([CDC](#)) and the National Institutes of Health (NIH) are both suffering staff shortages, according to **Dr. Marty Makary**, a top public-health expert at Johns Hopkins University, writes at [Common Sense](#), the Substack run by former New York Times columnist, Bari Weiss.

Major decisions made by the agencies that hurt morale included support for masking in schools, school closures during the pandemic and the authorization of [COVID-19](#) vaccines for children four and under.

Both agencies, along with the Food and Drug Administration ([FDA](#)) have been mired in controversy throughout the pandemic for inconsistent messaging and for decision-making that didn't seem to line up with available science.

'They have no leadership right now. Suddenly, there's an enormous number of jobs opening up at the highest level positions,' an anonymous NIH scientist told Common Sense.

Schools became a battleground of the COVID-19 pandemic in America.

When the virus stormed the world in 2020, many officials immediately shut things down – schools, retail stores, entertainment venues, restaurants – out of a fear of the unknown.

Initial data showed children suffered limited risk when they contracted the virus, though, and that it was mainly the elderly and severely immunocompromised that bore the virus's burden.

Despite the evidence, the CDC still recommended schools stay closed until the end of the 2019-2020 school year.

...

COVID tsar **Dr. Anthony Fauci** repeatedly warned that [lifting mask mandates from children was 'risky.'](#) while simultaneously saying it was time to return back to normal. That was in February.

On July 13, [Fauci flip-flopped again](#), recommending that masks still be work in indoor public gatherings while telling Americans they shouldn't let the BA.5 COVID-19 variant 'disrupt our lives.'

Makary, however, warned masks may've harmed kids' social and emotional development as they couldn't properly read human emotions or the facial expressions of covered faces.

The decision that seemed to raise the most commotion was the authorization of COVID-19 jabs for children aged six months to five years old.

CDC **Director Rochelle Walensky** signed off on those vaccines in June, after a panel of advisors to the US Centers for Disease Control and Prevention voted 12 to 0 in favor of

COVID-19 vaccines for children as young as six months on June 18.

...

'The public has no idea how bad this data really is. It would not pass muster for any other authorization,' an FDA official said.

Amid the many controversies the agency was facing at the time, the CDC announced in April that it would reevaluate its structure and processes in the hopes of developing better processes to communicate with Americans.

It is unclear what changes, if any, were made as a result of the evaluation.
