It started slowly at first – a trickle of concerning reports that something wasn't right. In January 2021, just weeks after the rollout of the COVID-19 vaccines, cases of myocarditis began cropping up.

Myocarditis – inflammation of the heart muscle – had never been linked to vaccines before. So when 28 cases were reported to the U.S. vaccine adverse event reporting system (VAERS) [1] that month, it raised eyebrows.

By February, the trickle had become a stream. VAERS received 64 more reports, including two deaths [2]. Then in March, Israel [3] and the military [4] started reporting cases too.

Something strange was going on. But the authorities ignored it.

In March, the FDA authorized the Johnson & Johnson vaccine without a whisper of myocarditis [5]. The CDC soon recommended it for all adults [6]. Colleges and businesses started mandating the shots [7]. It was full speed ahead.

Behind closed doors though, alarm bells were ringing. The CDC met with the military to discuss the myocarditis cases in young troops [8]. Israel was reporting dozens of cases, including in teenagers [9]. The FDA knew from Pfizer that there were nearly 60 cases already in its database [10].

But in public, it was denial and dismissal. The CDC director claimed she wasn't aware of any military cases [11]. Pfizer hid its database numbers [12]. And the FDA rubber stamped authorization of the Pfizer vaccine for teenagers in May without a mention of myocarditis [13].

As myocarditis reports flooded into VAERS in the hundreds during the summer [14], young, healthy people continued being pressured to get vaccinated. Mandates rolled out across the country [15]. The authorities told the public the benefits outweighed the risks [16].

But patients started sharing their stories of being hospitalized with heart problems after vaccination [17]. Researchers began publishing case reports in medical journals [18]. And still, the CDC publicly downplayed concerns [19].

Behind closed doors, officials strategized about monitoring the alarming reports [20]. They expanded the criteria for identifying myocarditis cases [21]. More hospitals confirmed seeing unusual cases in vaccinated youths [22].

In June, the FDA quietly added warnings about myocarditis to the vaccine fact sheets [23]. The news dripped out slowly that CDC advisers now acknowledged a “likely association” [24].

But the full scope remained obscured. The authorities clung to the narrative that benefits outweighed risks [25]. They used incomplete data and rosy assumptions to claim the vaccines were still worth it for young people [26].

Millions of teenagers continued getting pressured to get vaccinated throughout the summer and fall [27]. It became painfully clear that the drive for widespread vaccination took precedence over transparency and caution.

It wasn't until October 2021 that the warnings were taken more seriously. Nordic countries limited the Moderna vaccine due to myocarditis concerns [28]. The FDA and CDC were forced to address the risks more openly in meetings [29].

But still, they pushed ahead with expanding the shots to younger ages [30]. Five-year-olds started getting vaccinated in November despite a complete lack of safety data [31]. Booster doses were promoted for teenagers against the advice of their European counterparts [32].

The evidence continued piling up into 2022 that the vaccines were inflaming hearts [33]. Young people, almost all male, were suffering severe outcomes [34]. The FDA fully approved the Moderna and Pfizer vaccines with scarcely a mention of myocarditis [35].

Regulators around the world scaled back recommendations for boosters in young people as more safety signals emerged [36]. But the U.S. charged ahead, even permitting a fourth dose before any trial data was available [37].

Three years and over 1,600 confirmed VAERS reports later [38], the CDC finally admitted publicly that the mRNA vaccines cause myocarditis [39]. But authorities continue maintaining the stance that benefits outweigh risks across all groups [40].

Yet as researchers report finding heart abnormalities months later [41], it's unclear if the full scope of risks is known. Some experts argue society lost sight of “first, do no harm” in the rush to vaccinate an entire population against COVID-19 [42].

Why were the early warning signs dismissed? How many ended up harmed from ignored or hidden signals [43]? And why does debate about vaccine prudence remain taboo despite mounting evidence condemning overly broad immunization policies [44]?

This story is far from over. As more studies probe long-term effects and deaths possibly caused by vaccine-induced myocarditis [45], questions will continue swirling.

The families forever changed want accountability. Recognition that mass vaccination programs failed to uphold informed consent [46]. And assurances that blindly “following the science” won’t again take precedent over individuals’ health [47].

Myocarditis turned out to be the tip of the iceberg when it came to underestimated vaccine risks [48]. Only time will tell the full scope of lives upended and lost in the race to inoculate the world [49].

The Worldwide Corona Crisis, Global Coup d'Etat Against Humanity

by Michel Chossudovsky

Michel Chossudovsky reviews in detail how this insidious project “destroys people’s lives”. He provides a comprehensive analysis of everything you need to know about the “pandemic” — from the medical dimensions to the economic and social repercussions, political underpinnings, and mental and psychological impacts.

“My objective as an author is to inform people worldwide and refute the official narrative which has been used as a justification to destabilize the economic and social fabric of entire countries, followed by the imposition of the “deadly” COVID-19 “vaccine”. This crisis affects humanity in its entirety: almost 8 billion people. We stand in solidarity with our fellow human beings and our children worldwide. Truth is a powerful instrument.”

Reviews

This is an in-depth resource of great interest if it is the wider perspective you are motivated to understand a little better, the author is very knowledgeable about geopolitics and this comes out in the way Covid is contextualized. —Dr. Mike Yeadon

In this war against humanity in which we find ourselves, in this singular, irregular and massive assault against liberty and the goodness of people, Chossudovsky’s book is a rock upon which to sustain our fight. -Dr. Emanuel Garcia

In fifteen concise science-based chapters, Michel traces the false covid pandemic, explaining how a PCR test, producing up to 97% proven false positives, combined with a relentless 24/7 fear campaign, was able to create a worldwide panic-laden “plandemic”; that this plandemic would never have been possible without the infamous DNA-modifying Polymerase Chain Reaction test - which to this day is being pushed on a majority of innocent people who have no clue. His conclusions are evidenced by renown scientists. —Peter Koenig

Professor Chossudovsky exposes the truth that “there is no causal relationship between the virus and economic variables.” In other words, it was not COVID-19 but, rather, the deliberate implementation of the illogical, scientifically baseless lockdowns that caused the shutdown of the global economy. -David Skripac

A reading of Chossudovsky's book provides a comprehensive lesson in how there is a global coup d'état under way called "The Great Reset" that if not resisted and defeated by freedom loving people everywhere will result in a dystopian future not yet imagined. Pass on this free gift from Professor Chossudovsky before it's too late. You will not find so much valuable information and analysis in one place. -Edward Curtin
