[Big Tech's Effort to Silence Truth-tellers: Global Research Online Referral Campaign](#)

More and more evidence is emerging about illegal US biomedical activities in ex-Ukrainian territories. In addition to the topic of biological weapons, it was recently discovered that Western Big Pharma companies were conducting drug tests on ethnic Russian citizens in a psychiatric hospital in Donbass with approval and support from Ukrainian authorities.

According to recently discovered documents published by Russian media, patients at a psychiatric hospital in Mariupol (Donetsk People's Republic) were being subjected to irregular medical tests by agents linked to Western Big Pharma companies.

The hospital "No. 7" in Mariupol is currently undergoing restoration work. During the repair activities, local employees found documents in the basement of the psychiatric sector's facilities which prove that foreign companies were unofficially testing rheumatological drugs on local patients.

The objective of the research was to evaluate the effectiveness of medicines according to the standards established by the American College of Rheumatology (ACR). Several companies participated in the experiments, including large Big Pharma corporations, [such as](#) "Pfizer, AstraZeneca, Celltrion, Novartis International AG, IQVIA, Sanofi, Galapagos NV, Janssen Pharmaceuticals, Abbott Laboratories, Covance, Merck KGaA, Centocor Biopharmaceutical and [even] a branch of Samsung that produces medical equipment."

In the same place where the documents were stored, boxes containing biomaterials were also found. The materials were apparently ready to be sent to laboratories in the US, UK and Switzerland. With this, the Russian authorities were able to obtain biological evidence, not just documentary one, about such research - showing that the experiments were in fact carried out.

“According to the results of studying the documents, it became known that the drugs were tested on people with numbers, without names. The drugs themselves were in white envelopes and also without names. The main purpose of the research was to evaluate the effectiveness of drugs in relation to the proportion of patients who achieved a response to it according to the criteria of the American College of Rheumatology. In addition, boxes were found containing many envelopes from logistics companies and containers for biomaterial with recipient addresses in laboratories in Switzerland, the United Kingdom and the United States,” [Russian report says](#).

The selection of psychiatric patients appears to have been a “strategic” decision on the part of Western companies and Ukrainian authorities.

Obviously, people with fragile psychiatric conditions are an “easier” target to be convinced to undergo such experiments. More than that, many of the patients may have been subjected to the tests completely unconsciously, having their bodies abusively exploited by foreign doctors.

These practices do not sound surprising, however. It had previously been revealed that foreign agents had carried out tests with neuromodulators on socially vulnerable patients in the Kharkov region. In 2022, Russian forces exposed evidence that experiments of this type had taken place in American military biolaboratories, causing irreversible damage to the nervous systems of several patients submitted to the illegal procedures.

“In accordance with the available information, highly active substances of neuromodulators were tested on socially vulnerable citizens of Ukraine, which caused, among other things, irreversible damage to the central nervous system. This is a clear violation of the norms of international treaties in the field of human rights (...) Thanks to the documents obtained during the special military operation, we became aware that such studies have been carried out in Ukraine since at least 2011, and Alharoun has repeatedly visited the branch of the Merefya laboratory, built at the expense of the Pentagon in the village of Sorokovka, Kharkov region,” Lt. Gen. Igor Kirillov, the head of the radiation, chemical and biological defense of the Russian Armed Forces [said at the time](#).

In fact, American biolaboratories in Ukraine were [joint civilian-military schemes](#), having received funding not only from the Pentagon but also from private organizations such as Big Pharma companies and even “philanthropic” foundations. This broad network to promote biomedical research operated in a cooperation system in which the Pentagon developed biological weapons and private companies used military facilities to operate irregular experiments by inoculating their drugs on vulnerable native patients.

It is shocking to know that the Ukrainian government cooperated with this type of practice and allowed its citizens to be subjected to such abuse by foreign agents. This just shows how in fact the Kiev regime never cared about its own people, being willing to even allow operations of high biological, health danger in its territory just to please its Western “partners”.

Indeed, territorial liberation through Russian military force was the only way to prevent the continuation of these brutal acts.
