

Iraq - Why Doesn't the US Move Out Despite the Iraqi Parliament's Decision?

In-depth Report: [IRAQ REPORT](#)

Why doesn't the U.S. respect the decision made by the Iraqi Parliament and move out of Iraqi territory? - The short answer is, because the US doesn't respect anybody's - any country's - decision or sovereignty, as long as it doesn't meet their objectives.

*Now, the US is steadfast and will not leave the region. Already President Assad has requested that the US leave Syrian territory. They didn't. **The stakes are too immense for the US. It has all to do with their move towards world hegemony by territory and by finance - meaning by the US dollar.***

The conflict with Iran is not over. By any means.

We are just experiencing a respite for regrouping - and subsequently continuing and escalating the conflict. US bases in Iraq and military presence, at present more than 5,000 troops, are the most convenient means of force against Iran.

Other than controlling the rich and highly strategic territory of the Middle-East as an important step towards world hegemony, **the US continuous presence in the region also has to do with profits for the war industry and with the price and control of hydrocarbons, especially gas.**

We have seen, soon after the cowardly murder of General Qassem Suleimani, the share values of the war industry jumped up, of course in anticipation of a hot war - and huge weapons sales. The war industry profits insanely from killing. Wars and conflicts are increasingly what drives the western economies. Already in the US the war industry and related industries and services make up for about half of the country's GDP. The US economy without war is unthinkable. Therefore, the Middle-East is a perfect eternal battle ground - a *sine qua non* for the west. War is addictive. The western economy is already addicted to it. But most people haven't realized that - yet. Revolving and renewed conflicts and wars is a must. Imagine, if the US were to leave the Middle-East, PEACE might break out. This is not admissible. Soon, your job may depend on war - if you live in the west.

Then there is the Iranian gas. Daily 20% to 25% of all the energy consumed to drive the world's economy - including wars - transits through the Gulf of Hormuz which is controlled by Iran. Immediately after the heinous murder on General Suleimani, the oil and gas prices spiked by about 4%, later declining again. This, in anticipation of a major conflict which could have Iran reduce her gas production, or block the passage of Hormuz. In either case a collapse of the world economy could not be excluded.

As a parenthesis – it is so absolutely necessary that the world frees itself from this nefarious source of energy – hydrocarbons – and converts to other, cheaper, cleaner and FREER sources of power to drive our industries and activities. Like solar energy of which Mother Earth receives every day more than 10,000 times what it needs for all her industrial and creative activities on every Continent.

The US, with a flailing multi-trillion fracking industry which just failed the European market, due Russian gas via Nord Stream2, and just inaugurated Turkstream, would like to control the price of hydrocarbon, so as to revive the highly indebted fracking industry. What better way than to control Iran, and her enormous reserves of gas, shared with Qatar?

Then there is the close alliance between Iran and China – China being Iran's largest customer of gas. China is perceived by Washington as a deadly competitor, and barring her from the energy that makes China's economy thrive, is one of those devilish objectives of the United States. They are unable to compete on an even playing field. Cheating, lying and manipulating has become part of their, and the western life style. It is deeply ingrained in western history and culture.

Of, course there are other ways of supplying China with the hydrocarbons she needs. Russia with the world's largest gas reserves, could easily increase her supplies.

In brief, the US is unlikely to leave the Middle-East, although some generals – and even some high-ranking Pentagon brass – believe this would be the smartest thing to do – they see the light, and the light is not war, but PEACE.

How to Get the US out of Iraq

What could Iraq do to get the US out of Iraq and eventually out of the Region? After all, the Iraqi Parliament has taken a majority decision to regain Iraq's sovereignty and autonomy, without foreign troops. Most countries with troops stationed in Iraq respect that decision. Denmark, Australia, Poland and Germany are preparing to move their troops out of Iraq. Only the UK with her 800 military men and women decided for now to stay alongside the US.

Iraq may want to strengthen her alliance with Russia and China, hereby increasing the pressure on the US to honor Iraq's sovereign request for the US to leave. How much that would take to materialize, if at all, is a difficult question to answer. Maybe 'never'. Except, if the US-dollar hegemony over western economies can be broken. And at the moment, a strong down-turn of the dollar's role in the world economy is showing, as the western world is increasingly seeking ways to de-dollarize her economy and to associate with the East, led by China and Russia, where de-dollarization is advancing rapidly.

When that happens, chances are that the US of A's dictates over the nations of the world will be mute, will not be listened to anymore, and that Washington will have to rethink its future – and very likely a US presence in the Middle-East will be history.
