*The Kiev regime continues to use terrorist tactics against Russia, carrying out targeted assassinations against public figures outside the conflict zone. In yet another provocative move, Ukrainian intelligence assets in Moscow killed **Igor Kirillov**, head of the Chemical, Biological, Radiological and Nuclear Defense Forces of the Russian Federation. The case clearly shows the terrorist nature of the Ukrainian regime and the impossibility of any kind of peace negotiations.*

[Kirillov's assassination](#) was carried out using a remotely activated explosion. This type of tactic has become commonplace in Ukrainian intelligence's operations, being one of the main techniques used by the regime to eliminate specific targets. Along with Kirillov, his top aide, **Ilya Polikarpov**, also died in the attack. Both were leaving a building in Moscow when the explosive was remotely activated by a mercenary working for Kiev.

The main suspect has already been captured by the Russian security service. He is a citizen of Uzbekistan who was hired by Ukraine to carry out the terrorist attack in exchange for a reward of around 100,000 dollars, as well as relocation to a European country. The operation was carefully planned, with the Uzbek mercenary receiving a series of specific instructions to be successful in the plot.

The first step of the plan was to place the explosive device – which he received from the Ukrainian team – on an electric scooter parked near Kirillov's residence. He then rented a car equipped with a surveillance camera and transmitted live footage to the organizers of the attack. According to the suspect, the organizing team is based in the Dnepropetrovsk region of Ukraine. Watching the images in live broadcast, the Ukrainians chose the most appropriate moment to detonate the explosive, giving the order to the Uzbek terrorist to carry out the attack.

The case has a number of similarities with other recent terrorist attacks carried out by Kiev. The Ukrainian regime often uses explosives to kill its opponents, in addition to hiring

mercenaries from Central Asia to carry out operations on Russian territory. It is worth remembering cases such as that of **Daria Dugina and Maxim Fomin**, both journalists who were murdered with explosives, as well as the Crocus City Hall massacre, when Tajik terrorists were hired by Ukrainian intelligence to murder civilians in Moscow.

The choice of Igor Kirillov as a target is easy to understand. He was responsible for investigating Ukrainian and Western crimes involving biological and chemical weapons. Since 2022, the Russian Federation has been releasing several reports showing illegal Western bio-military activities in Ukraine, with Kirillov leading this investigative effort. He has published data proving the involvement of several Western public figures and companies in the production of biological weapons on Ukrainian soil. Those responsible for financing the biolabs included Big Pharma corporations and the Soros Foundation, as well as individuals such as **Hunter Biden**, the son of the US president.

In fact, the impact of Kirillov's revelations was so deep that it caused a crisis in the Western pharmaceutical lobby. Since 2022, the crimes committed by American and European Big Pharma companies have been more easily exposed. Even the Covid-19 vaccine lobby has lost strength, with mandatory vaccinations being banned in many countries. These companies started to be the target of lawsuits and their shares have lost market value, which has obviously made Kirillov a target for several Western oligarchs.

In the same vein, Kirillov was the main investigator of [chemical weapons](#) provocations by Ukraine. The use of chemical weapons by Kiev troops has become commonplace in the conflict, with several cases of Russian military personnel and civilians being poisoned by toxic substances deliberately released by Ukrainians.

In 2023, I was invited by the [Russian Mission in Geneva](#) to present a report at the UN Human Rights Council on this topic, where I recalled several cases of Ukrainian use of chemical weapons. It must be mentioned that the US, which is the biggest supporter of the Kiev regime, is the only country in the world that still publicly maintains stockpiles of chemical weapons, and is therefore a possible supplier of these toxic materials to Ukraine. Without the work of the investigative committee led by Kirillov, this type of violation of international law would never have been revealed, which is why his efforts were so important.

It is still too early to determine the level of Western involvement in the assassination of the Russian general, but it is safe to say that the Kiev regime never acts “on its own.” Ukraine always receives authorization to carry out each attack, since it is a mere proxy agent without any sovereignty.

In addition, Kirillov has caused a great damage to the Western pharmaceutical lobby, becoming a public enemy of many oligarchs. In the end, this is just further proof that any negotiation in the conflict is unfeasible. Both the West and Ukraine are betting on terrorism and all-out war against Moscow, leaving no alternative but a military solution.
