The Food and Drug Administration (FDA) [has produced](#) another 11,043 pages of Pfizer documents, one of them showing that the company had to hire an additional 2,400 employees to handle the onslaught of adverse reactions caused by its Wuhan coronavirus (COVID-19) “vaccine.”

Page 6 of FDA-CBER-2021-5683-0000059 clearly states:

“Due to the large numbers of spontaneous adverse event reports received for the product, the MAH [marketing authorization holder] has prioritized the processing of serious cases, in order to meet expedited regulatory reporting timelines and ensure these reports are available for signal detection and evaluation activity.”

The document goes on to reveal that Pfizer did “multiple actions to help alleviate the large increase of adverse event reports.”

“This includes significant technology enhancements and process and workflow solutions, as well as increasing the number of data entry and case processing colleagues. To date, Pfizer has onboarded approximately 600 additional full-time employees (FTEs). More are joining each month with an expected total of more than 1,800 additional resources by the end of June 2021.”

Remember when Albert Bourla denied these adverse effects and said that people who talk about them are “criminals?”

Company CEO Albert Bourla, meanwhile, [has condemned](#) anyone who dares to speak up about these revelations.

Any person who even suggests that Pfizer's Fauci Flu shot is dangerous should be designated as a "criminal," Bourla insisted. According to him, saying anything "negative" about the injections constitutes "misinformation" – this being a common sociopathic trait.

The Pfizer document ends with nine full pages of reported adverse events – you know, the ones that Bourla does not want any "criminals" talking about. Many of them are autoimmune-related, which makes sense in the context of vaccination.

Thousands, if not *millions*, of people were punished for just saying no to these deadly injections. For the "crime" of refusing to have their immune systems damaged, the non-jabbed lost their jobs, were removed from school, and in some cases, became homeless simply for trying to protect themselves.

Many are calling this whole job situation the greatest conspiracy of our lifetime, and it really looks like it. And the sad part is that it is still not over, as people continue to face the ultimatum of either obeying Big Pharma or sacrificing their freedoms.

"While everyone's eyes have been on Ukraine, the World Health Organization (WHO) has quietly moved forward with a 'pandemic treaty,'" warned *Strange Sounds*. "This law will supersede state law for any countries who sign into it. And Republicans joined with Democrats to pass the national digital vaccine registry."

This registry, in case you missed hearing about it, will log every American's vaccination status with the government, that way the authorities will know who to round up for disobedience at some later date.

So, while it might seem like COVID is mostly over at this point, do not be fooled. It is *far* from over. The plan is to birth a new global infrastructure out of the sham that will eventually force all human beings to either take whatever injections they are told or be punished.

"The Great Reset is in full swing!" *Strange Sounds* further warned. "Get ready!"

In the comment section, someone wrote that people should be reminded that the government has repeatedly stated that there are too many people on the planet.

"They also believe that you are one of those too many people," this person added.

Another wrote that the government continues to "serve up 'goolash' and everyone thinks it's just awesome when no one knows the long-term effects," referring to the injections.
