Jim Turner, a Washington, D.C., attorney noted for his work on consumer health issues, is filing suit today in federal court to stop all swine flu vaccinations from being given in the United States. The action was reported this morning on the health website NaturalNews.com.

According to [NaturalNews.com](#) editor Mike Adams, "The lawsuit charges that the FDA violated the law in its hasty approval of four swine flu vaccines by failing to scientifically determine neither the safety nor efficacy of the vaccines."

Turner is filing the suit on behalf of plaintiff Gary Null, the New York health broadcaster and author, as well as health professionals in New York State who are being told to take the shot or get fired.

The suit seeks to overturn FDA's approval of the vaccine as well as persuade the court to issue an injunction against any mandatory vaccinations. Turner told Adams on Thursday night's NaturalNews.com internet radio show, "The FDA is required by law to establish that a vaccine is safe and effective before it can be given to the public. We are arguing that they did not establish that the vaccine was effective, and did not establish that it was safe. They are trying to get it on the market by a waiver."

According to comments by Mike Adams, "To date, the FDA has produced absolutely no scientific evidence documenting safety tests for any of these swine flu vaccines. There are no published studies, no records of any clinical trials, and no publicly-available paper trail demonstrating that any safety testing was done whatsoever. There is no researcher who has publicly put their name on the record declaring the vaccines to be safe, and no FDA official has ever stated that scientifically-valid safety testing has ever been conducted on the vaccine / adjuvant combinations now being distributed across America."

Jim Turner works with [Citizens for Health](#), a non-profit health activist group, and is a partner in the law firm Swankin and Turner. He was involved in helping to stop the administration of the swine flu vaccine in 1976 when many people who got the shot came down with Guillain-Barre syndrome, leading in some cases to paralysis and death.
