The Dignity of Human Beings and Their Personality: Neurotechnology and The Manipulation of The Human Nervous System. “Saving Freedom and Democracy”

Open Letter to the European Union and Governments around the World

by Mojmir Babacek

Due to advances in physical science and neurotechnology, it is crucial to introduce in the [Charter of Fundamental Rights of the European Union](#) the following amendments, which should then be reflected in the legislations of the member states of the European Union.

It is unacceptable that any human being in the European Union could be deprived of his or her dignity by manipulation of his or her nervous system and personality by dual use

neurotechnologies.

Nobody will be deprived of his or her right to life by the use of weapons based on the effects of physical fields on the human body or nervous system to cause the death of a person by remotely-produced heart attack (see [this](#), pg. 250); suffocation ([pg. 254](#)); any form of cancer; diabetes; myocardial infarction; haemorrhage in the brain; thrombosis in the lungs, formation of blood clots ([pg. 485](#)) or any other deadly disease or malfunction of organs produced at a distance by electromagnetic or any other physical fields. Use of such fields to kill people will be considered, murder.

It is prohibited, under harsh sentences, to remotely access human brains with the use of technical means to decipher its activity and to control it for other than medical purposes ([pg. 250, 251, 256](#)).

Depriving a person of his or her free will with the use of dual use neurotechnologies imposing on him or her thoughts, emotions ([pg. 250](#)), hallucinations etc. or manipulating his or her subconscious and turning him or her, in this way, into a toy in the hands of manipulators ([pg. 321](#), J.F. Schapitz) will be considered to be a torture, as well as imposing on him or her, in this way, sicknesses, illnesses, malfunction of organs or pain, control of limbs or producing pains or burns inside, or on, his or her body, by means of electromagnetic waves, directed energy weapons or other, as yet unpublished, physical means discovered by quantum physics research (for example non-local electron and photon connection (see [this](#)) or potential fields (see [this](#) and [this](#)).

Everyone has the right to liberty and security, including the protection of his or her body by the law from abuse of this right by electromagnetic waves, directed energy or other physical fields or methods discovered by quantum physics.

Everyone has the right to the protection of his or her own personal data, including the data contained in his or her brain. This data must not be collected from anyone for other than medical purposes and even for those purposes it must not be done without the informed consent of the person (see [this](#)).

Imposing remotely thoughts to human beings by means of dual-use neurotechnologies is strictly prohibited under harsh sentences (see [this](#)).

To make sure that the democracy in the European Union will be preserved for future decades, the use of neurotechnologies enabling remote control of the activity of human nervous systems, thoughts, emotions etc, by means of pulsing of the transmissions of mobile phone systems in brain frequencies (see [this](#)), or manipulating the ionosphere to produce extra-long electromagnetic waves in brain frequencies (see [this](#), [this](#) and [this](#)), or producing such electromagnetic waves in the electric grids or any other systems for the purpose of transmitting energy into human brains and interfering with their activities will be prohibited to the government officials of the European Union Member states or any other governments agencies, corporations or organizations, on, or above, the territory of the European Union, under heavy penalties.

To make sure that this prohibition is observed as well as the prohibition to access brain data of individual brains, the governments of the Member states will establish teams, which will be equipped by the means that will enable them to detect radiations and other technical inventions, capable of controlling the human brains activities.

Scientists, with the expertise in those fields, will be obliged by the law to advise those teams, whenever they ask for it.

The teams must be trained to use this equipment and among their members should be representatives of at least two renowned human rights organizations, who will be paid by those organizations. They will be obliged by the law not to disclose the technologies, enabling remote access, to the activity of the human brains, but as well they will be obliged to publish the prohibited use of those technologies and identities of the abusers, including governments and their officials.

The trespassers will be punished by long sentences in prison. By the same, sentences will be punished anyone, including government officials or government agencies officials, who will authorise insertions or insert in the brains or other parts of the bodies of human beings, chips, graphene antennas (see [this](#)), or any other nanoparticles or viruses (see [this](#)) facilitating the control of the activity of the human nervous system for other than medical purposes. Even for medical purposes, it can be done only with the informed consent of the person. Inserting those materials into food, water, inoculation or aerosols or authorisation of those insertions by government officials will be punished by life in prison. Scientists, who will be aware of such actions, will be obliged, by law, under harsh penalties, to inform media of such actions and media will be obliged, by law, to publish such incriminating information.

Production, use or trade with all types of pulse generators pulsing electromagnetic or other energy from 0 Hz to 100 Hz will be prohibited by law under the penalty of a minimum of 15 years in prison with the exception of pulse generators produced and used for medical purposes. Those pulse generators will be registered at the production site and their presence in the medical establishments will be under permanent protection and control.

Transmissions of any type of energy in the frequencies from 0 to 100 Herz are prohibited by law under penalty of a minimum of 15 years in prison.

In order to fully meet the objective, to secure the freedom of thought of their citizens, the Member states of the European Union will publish the existence of technologies of remote control of the activity of the human nervous system, disclosing what kinds of radiation, or brain to brain connection, can be used for remote control of the activity of the human nervous system, without disclosing the actual procedures which are used to achieve such control. The scientists will be obliged, by law, under harsh penalties, to disclose the existence of such technologies to the general public in case governments, or other entities, try to hide them. The government officials, who will try to hide them, will be punished by a minimum of 15 years in prison.

To ensure the implementation of this strategy, to preserve human rights in the coming years and decades, the European Union will, in addition to the publication of the existence of those technologies, actively work for international treaties, banning the use of those technologies, by every state and country, on the planet. The control of the observation of this ban will be conferred by the United Nations Organization. As a part of this process the European Union will renounce its participation in the NATO program of non-lethal weapons, using “Directed Energy Weapons that can allegedly manipulate human behaviour in a variety of unusual ways... with systems which can directly interact with the human nervous systems” (quoted from the European Parliament document on Crowd Control Technologies” from the year 2000, ([pg. 25 and 69](#))).

All those actions are absolutely necessary to ensure that any person in the European Union Member States will be able to enjoy its freedom of thought when deciding for whom it will cast its vote in the election or what is his or her political opinion as well as what are his or her life options.

Your respectfully,

Mojimir Babacek

Mojmir Babacek was born in 1947 in Prague, Czech Republic. Graduated in 1972 at Charles University in Prague in philosophy and political economy. In 1978 signed the document defending human rights in communist Czechoslovakia „Charter 77“. Since 1981 until 1988 lived in emigration in the USA. Since 1996 he has published articles on different subjects mostly in the Czech and international alternative media.

In 2010, he published a book on the 9/11 attacks in the Czech language. Since the 1990's he has been striving to help to achieve the international ban of remote control of the activity of the human nervous system and human minds with the use of neurotechnology.
