August 9/06 Microwave weapons for crowd control used to be top-secret stuff. No more. Raytheon, which makes them for the military, now promotes its Silent Guardian, [see below] a smaller version of its Active Denial system (see MWN, M/A01), on the Web. Silent Guardian is “available now and ready for action,” Raytheon promises. The company even discloses its range, which used to be closely held. It can “de-escalate aggression” at 250 yards, Raytheon states in its best defense-speak. To tempt you further, you can also download a 30-second video, with an up-tempo soundtrack.

From <http://www.microwavenews.com/>

The Silent Guardian™ protection system is a revolutionary less-than-lethal directed energy application that employs millimeter wave technology to repel individuals or crowds without causing injury. The system provides a zone of protection that saves lives, protects assets and minimizes collateral damage. Silent Guardian produces precise effects at longer ranges than current less-than-lethal systems and provides real-time ability to establish intent and de-escalate aggression. Various commercial and military applications include law enforcement, checkpoint security, facility protection, force protection and peacekeeping missions. The system is available now and ready for action.
