

Monsanto Merges with Bayer, “Their Expertise is War”. Shady Historical Origins, IG Farben, Part of Hitler’s Chemical Genetic Engineering Cartel

Crimes against Nature and Humanity

India is steeped in synthesised controversy, created by Monsanto on the first GM crop supposedly-approved for commercialisation in India. Engaged in litigation on many fronts, Monsanto is trying to subvert our Patent Law, our Plant Variety and Farmers Rights Act, our Essential Commodities Act, our Anti Monopoly Act (Competition Act). It is behaving as if there is no Parliament, no Democracy, no Sovereign Laws in India to which it is subject. Or, it simply does not have any regard for them.

In another theatre, Monsanto and Bayer are merging. They were one as MOBAY (MonsantoBayer), part of the Poison Cartel of IG Farben. Controlling stakes of both Corporations lies with the same private equity firms.

I.G. Farben board member Fritz ter Meer (fifth from right) explains to Adolf Hitler the significance of synthetic rubber, Berlin, 1936, © National Archives, Washington, DC (image right)

The expertise of these companies are those of war. IG Farben – Hitler’s economic power and pre-war Germany’s highest foreign exchange earner – was also a foreign intelligence operation. Herman Shmitz was President of IG Farben, Shmitz’s nephew Max Ilgner was a Director of IG Farben, while Max’s brother Rudolph Ilgner handled the New York arm of the ‘VOWI’ network as vice president of CHEMNYCO.

Paul Warburg – brother of Max Warburg (Board of Directors, Farben Aufsichtsrat) – was one of the founding members of the Federal Reserve System in the United States. He was also a member of the Council on Foreign Relations. Max Warburg and Hermann Schmitz played a central role in the Farben empire. Other “guiding hands” of Farben Vorstand included Carl Bosch, Fritz ter Meer, Kurt Oppenheim and George von Schnitzler. Every one of them were adjudged ‘War Criminals’ after World War II, except Paul Warburg.

Monsanto and Bayer have a long history. They made explosives and lethally poisonous gases using shared technologies and sold them to both sides in both World Wars. The same war chemicals were bought by the Allied Powers and the Axis Powers, from the same manufacturers, with money borrowed from the same federated reserve bank.

MOBAY (MonsantoBayer) supplied ingredients for Agent Orange in the Vietnam War. 20 million gallons of MOBAY defoliants and herbicides were sprayed over South Vietnam. Children are still being born with birth defects, adults have chronic illnesses and cancers, due to their exposure to MOBAY’s chemicals. Monsanto and Bayer’s cross-licensed Agent Orange Resistance has also been cross-developed for decades.

Wars were fought, lives were lost, countries carved into holy lands – with artificial boundaries that suit colonisation and resource grab – while Bayer and Monsanto sold chemicals as bombs and poisons and their brothers provided the loans to buy those bombs.

More recently, according to [Monsanto’s website](#) Bayer CropScience AG and Monsanto Co. have “[entered into a series of long-term business and licensing agreements related to key enabling agricultural technologies](#)”. This gives Monsanto and Bayer free access to each other’s herbicide and the paired herbicide resistance technology. Through cross licensing agreements like these, mergers and acquisitions, the biotech industry has become the IG Farben of today, with Monsanto in the cockpit.

The Global Chemical and GMO industry – Bayer, Dow Agro, DuPont Pioneer, Mahyco, Monsanto and Syngenta – have come together to form Federation of Seed Industry of India (FSII) to try and become bigger bullies in this assault on India’s farmers, the environment, and democratically framed laws that protect the public and national interest. This is in addition to the lolly-group ABLE, the Association of Biotechnology Led Enterprises, which tried to challenge India’s Seed Price Control order issued under the Essential commodities Act, in the High Court of Karnataka. The case was dismissed.

The new Group is not “seed Industry”, they produce no seeds. And they try to stretch patents on chemicals to claim ownership on seed, even in countries where patents on seeds and plants are not allowed by law. This is the case in India, Argentina, Brazil, Mexico, and many other countries.

All the Monsanto cases in India are related to Monsanto un-scientifically, illegally and illegitimately claiming patents on seed, in contempt of India’s laws, and trying to collect royalties from the Indian seed industry and Indian farmers. The FSII is an “IG Farben 100 Year Family Reunion”, a federation is a coming together of independent and autonomous entities.

The Farben family chemical cartel was responsible for exterminating people in concentration camps . They embody a century of ecocide and genocide, carried out in the name of scientific experimentation and innovation. Today the poison cartel is wearing G-Engineering clothes, and citing the mantra of “innovation” ad nauseum. Hitlers concentration camps were an “innovation” in killing. 100 years later, the Farben Family are carrying out the same extermination, silently, globally, much more efficiently.

Monsanto’s “innovation” of collecting illegal royalties and pushing Indian farmers to suicide is also an innovation in killing without liability, indirectly. Just because there is a new way to kill does not make killing right, or a right. “Innovation” like every human activity, has limits - limits set by ethics, justice, democracy, the rights of people, the rights of nature.

I G Farben was tried at Nuremburg. We have national laws to protect people, their right to life and public health, and the environment. India’s Biosafety laws and Patent, and Plant Variety Act are designed to regulate greedy owners of corporations - with a history of crimes against nature and humanity.

Industry is getting ready to push its next “gene” the GM-Mustard (DMH-11). The GM mustard being promoted as a public sector “innovation” is based on barnase/barstar/ gene system to create male-sterile plants and a bar gene for Glufosinate Resistance. In 2002 Pro-Agro’s (Bayer) application for approval for commercial planting of GM Mustard based on the same system was rejected.

Although banned in India, Bayer finds ways to sell Glufosinate, to the tea gardens of Assam and the apple orchards of Himachal Pradesh, illegally. Sales agents show the Glufosinate sales under the ‘other’ category to avoid regulation. These chemicals are finding their way into the bodies of our children without government approval. Essentially all key patents related to the bar gene are held by Bayer Crop Science which acquired Aventis CropScience, which itself was created out of the Genetic Engineering divisions of Schering, Rhone Poulenc and Hoechst. Then Bayer acquired Plant Genetics Systems, and entered into cooperation agreement with Evogene - which has patents on genome mapping.

Before any approval is granted to the Genetically Engineered Mustard, the issue of limits to patentability needs to be resolved on the basis of Indian law, patents on plants and seeds and methods of agriculture must not be allowed, because they are not allowed.

Pental, a retired professor and GM-Operative, will not commercialise GM Mustard seed. His Commanding Officers at Bayer/Monsanto/MOBAY will.

Given our experience with GMO cotton, the Ministry of Environment and Forests (MoEF) is considering the option of putting in place guidelines for socio-economic assessment to judge proposed GM varieties on the basis of factors such as economy, health, environment, society and culture.

<http://m.thehindubusinessline.com>

At the core of socio economic assessment is the issue of monopolies and cartels and impact on small farmers. Even though patents on seeds are not allowed, for more than one and a half decade Monsanto has extracted illegal royalties from Indian farmers, trapping them in debt, and triggering an epidemic of farmers suicides. Monsanto’s war on India’s foot soldiers - farmers - is a war being waged by the Farben Family, on our Earth Family.
