

Monsanto Protection Act Signed By Obama, GMO Bill “Written By Monsanto” Signed Into Law

The Monsanto Protection Act, essentially both written by and benefiting Monsanto Corporation, has been signed into law by United States President Barack Obama. The infamous Monsanto Corporation will benefit greatly and directly from the bill, as it essentially gives companies that deal with genetically modified organisms (GMOs) and genetically engineered (GE) seeds immunity to the federal courts, among other things.

The bill states that even if future research shows that GMOs or GE seeds cause significant health problems, cancer, etc, anything, that the federal courts no longer have any power to stop their spread, use, or sales.

There are of course arguments to be made that not enough research has been done yet to accurately determine the effects that GMOs have on human and animal health (though the research already done should make you stop and think). This bill sidesteps that completely though, and simply states that even if there are problems, that the federal courts can no longer do anything about it. And this bill is now law, thanks to President Obama and the U.S. Congress.

Some other interesting things to keep in mind:

- The bill was apparently written by freshman Sen. Roy Blunt in collusion with Monsanto, with them helping to craft the exact language of the document.
- “The Center for Responsive Politics notes that [Sen. Blunt received \\$64,250 from Monsanto](#) to go towards his campaign committee between 2008 and 2012. The Money Monocle website adds that Blunt has been the largest Republican Party recipient of Monsanto funding as of late.”
- Many members of Congress were apparently unaware that the “Monsanto Protection Act” was a part of the spending bill that they were voting on.
- Obama had no problem signing it into law (not really a surprise, he’s been rather soft on GMO policy).
- The bill will only remain in effect for a limited time, but it’s a bad sign. With the ease that this bill passed, it’ll be interesting to see what future bills look like.

As the [Daily News](#) asks, “Who’s more powerful, the world’s largest producer of genetically

modified crops or the U.S. government?”

“On Tuesday, Pres. Obama inked his name to H.R. 933, a continuing resolution spending bill approved in Congress days earlier. Buried 78 pages within the bill exists a provision that grossly protects biotech corporations such as the Missouri-based Monsanto Company from litigation.”

“In light of approval from the House and Senate, more than 250,000 people signed a petition asking the president to veto the spending bill over the biotech rider tacked on, an item that has since been widely referred to as the ‘Monsanto Protection Act.’”

“But Obama ignored [the petition],” as the [IB Times](#) notes, “instead choosing to sign a bill that effectively bars federal courts from being able to halt the sale or planting of GMO or GE crops and seeds, no matter what health consequences from the consumption of these products may come to light in the future.”

GMOs, while they may cause problems for human health, are primarily a problem for other reasons, mostly to do with crop/genetic diversity and overly complex industrial systems. And also the fact that they [often don't even work the way that they are “supposed” to](#).

When taken in context though, GMOs are really just another in a long line of environmentally damaging practices that people have done for short term gain/profit. From the large-scale [deforestation of the world's old-growth forests](#), to sustenance farming, to modern imported-fertilizer/pesticide/herbicide/fossil-fuel dependent industrial agricultural, the trend has been consistent, GMOs are just another in that line of attempts to temporarily maintain/raise crop yields. Regardless of the type of agriculture or the location, there are limits to how long any land can remain productive, applying imported fertilizers, or utilizing GMOs, only provides, at best, a temporary halt to the land's transition to non-productive “wasteland”, and to desertification.

[Seeds of Destruction: The Hidden Agenda of Genetic Manipulation](#)

F. William Engdahl

Pages: 341 pages with complete index

List Price: \$25.95

Special Price: \$18.00

This skilfully researched book focuses on how a small socio-political American elite seeks to establish control over the very basis of human survival: the provision of our daily bread. “Control the food and you control the people.”

This is no ordinary book about the perils of GMO.

Engdahl takes the reader inside the corridors of power, into the backrooms of the science labs, behind closed doors in the corporate boardrooms.

The author cogently reveals a diabolical world of profit-driven political intrigue, government

corruption and coercion, where genetic manipulation and the patenting of life forms are used to gain worldwide control over food production. If the book often reads as a crime story, that should come as no surprise. For that is what it is.

Engdahl's carefully argued critique goes far beyond the familiar controversies surrounding the practice of genetic modification as a scientific technique. The book is an eye-opener, a must-read for all those committed to the causes of social justice and world peace.
