

Multipolar World's Tech Edge Grows, Leaves Political West Trailing Behind

By [Drago Bosnic](#)

Theme: [Intelligence](#), [Military](#) and [WMD](#)

The end of last year [saw some pretty incredible breakthroughs in military technologies](#), the most impressive among which is [the first "Oreshnik" strike](#), demonstrating [Russia's growing dominance in hypersonic weapons](#). Apart from [the "Oreshnik"](#), Moscow also started [the large-scale deployment of its unrivaled S-500 SAM/ABM](#) (surface-to-air missile/anti-ballistic missile) systems that can track and down all sorts of targets (including hypersonic). Multiple sources are also reporting that the Eurasian giant is [speeding up its "sixth generation" program](#), with [both the Sukhoi and MiG developing their own designs](#). In the meantime, [existing and proven Russian fighter jets](#), such as the Su-30 (multirole), Su-34 (strike fighter), [Su-35S \(air superiority\)](#) and [Su-57S \(next-generation multirole\)](#) are not only [conducting regular missions](#), but in the case of [the Su-35](#) are also helping countries like Iran maintain security amid constant US/NATO threats.

Then we have China, [which presented not one, but two working "sixth-generation" jet prototypes](#), named [Chengdu J-36 and Shenyang J-50](#) by the media, respectively. [The two aircraft](#) show what can only be described as [a quantum leap for Beijing](#), which is now [ahead of Washington DC in jet technologies](#), an unimaginable prospect [until just a few years ago](#). In fact, this was [such a shock for the US-led political West](#) that the mainstream propaganda machine is now openly engaging in a rather pathetic denial, claiming that the Pentagon [supposedly "flew its own prototype years ago"](#), something for which there's zero evidence. However, this development [sent Lockheed Martin's stocks crashing](#) as concerns for [the troubled F-35's future in the USAF started emerging](#). However, to make matters worse for Washington DC, there are also [reliable reports that China also flew the H-20](#), its first stealthy strategic bomber.

In addition to this aircraft, [which the Pentagon expects to enter service in the next five years](#), Beijing also inducted a number of other weapon systems, [including the KJ-3000 AEW&C](#) (airborne early warning and control) aircraft and [Type 076 carrier \(named "Sichuan"\)](#). What's more, China is also helping several other countries to strengthen their armed forces in the wake of the US-led aggression against the world. This includes Algeria, [which got a license to locally produce the Chinese Type 056 corvettes](#), as well as Serbia, [whose HQ-22 SAM systems acquired from Beijing just became fully operational](#). Thus, just like in the case of [Russian Su-35 fighter jets for Iran](#), these Chinese systems will help others maintain security and sovereignty, which is greatly contributing to global peace by deterring war criminal organizations such as NATO, [by far the world's most aggressive racketeering cartel](#).

To that end, North Korea is also updating [its already impressive arsenal](#), including [the "Hwasong-16B" IRBM](#) (intermediate-range ballistic missile) [armed with an HGV](#) (hypersonic

glide vehicle). [The weapon was test launched on January 6](#), demonstrating that [Pyongyang is still ahead of the US in hypersonic technologies](#). Just like in the case of Chinese next-generation jets, the mainstream propaganda machine is also engaging its coping mechanisms with [ludicrous claims that the Pentagon will “soon outpace” Russia and China in hypersonics](#), a laughable (and extremely unlikely) prospect given just how [far behind the US is](#). In the meantime, North Korean Russian-derived ATGM (anti-tank guided missile) systems, [specifically the “Bulsae-4”](#), are obliterating Western weapons in NATO-occupied Ukraine, which is yet another embarrassment and humiliation for the political West which regularly mocks Pyongyang.

[India is also upgrading its armed forces with Russian missile technologies](#), specifically the “BrahMos” supersonic cruise missile which is set to be [updated and deployed on a ground-based launcher](#). The weapon is based on the Russian P-800 “Onyx” supersonic cruise missile, one of the deadliest in its class, [as proven by its superb performance](#) during the special military operation (SMO). [Inspired by Chinese advances](#), Delhi is also expected to invest heavily in next-generation aircraft, likely in cooperation with Moscow, while supporting and helping its domestic military industry. This also includes hypersonic technologies, based on both Russian and homegrown designs.

All these developments stand in stark contrast to America’s growing technological ineptitude. It turns out that [its much-touted ABM systems aren’t exactly working as marketed](#).

Namely, [military sources report](#) that the THAAD (Terminal High Altitude Area Defense) system deployed in Israel failed to intercept Houthi missiles fired from Yemen. In addition, [the Pentagon is reconsidering the future of its V-22 “Osprey” tiltrotor aircraft](#) amid numerous crashes and operational faults. However, such failures don’t seem to deter the US and its vassals and satellite states from engaging in threats of more aggression against the world. There are numerous reports that Washington DC is preparing to attack Iran, with both [the outgoing Biden](#) and [upcoming Trump administrations](#) poised to do so regardless of their supposed differences in foreign policy approach. What’s more, there’s talk of the US annexing not just Canada, [but also Greenland and even attacking Panama](#). What started out as a “joke” turned out to be anything but, once again [confirming America’s aggressive nature](#).

Such developments demonstrate that [expecting groundbreaking changes in American foreign policy is overoptimistic](#), to put it mildly. The outgoing Biden administration is making sure that some of the worst people on the planet, including unrepentant war criminals such as **Hilary Clinton** and **Victoria Nuland** [still have major influence in US politics](#) even after Trump takes office.

Namely, Clinton was recently [awarded the so-called “Presidential Medal of Freedom”](#), along with the [George Soros](#). Individuals like Clinton, Nuland, Soros, etc. are extremely dangerous for sovereigntist nations and the multipolar world as a whole. Their activities, [much akin to political \(and, in many cases, literal\) terrorism](#), aim to destabilize non-compliant countries that want to break free from the political West’s extremely malignant influence. All this makes the development of adequate defenses all the more important.
