-“It could be a test firing of an intercontinental ballistic missile from a submarine underwater submarine, to demonstrate mainly to Asia, that we can do that.”

Pacific Ocean: A mysterious missile launch off the southern California coast was caught on video Monday evening by a KCBS news helicopter.

The spectacular contrail could easily be seen up in Los Angeles, but who launched this missile and why, remain a mystery for now.

The magnificent images were captured from the KCBS chopper around 5pm. The location of the missile was described as west of Los Angeles, north of Catalina Island, and approximately 35 miles out to sea.

A Navy spokesperson tells News 8, this wasn't its missile. He said there was no Navy activity reported in that part of the region.

On Friday, November 5, Vandenberg Air Force Base launched a Delta II rocket, carrying the Thales Alenia Space-Italia COSMO SkyMed satellite, but a sergeant at the base tells News 8, there have been no launches since then.

News 8 showed the video to Robert Ellsworth, former U.S. Ambassador to NATO and a former Deputy Secretary of Defense.

He said it didn't appear to be a Tomahawk missile and said it would be safest to wait for definitive answers to come from the military.

Based on pure speculation, however, Ambassador Ellsworth said, with President Obama in Asia, perhaps this could have been a show of our military muscle.

“It could be a test firing of an intercontinental ballistic missile from a submarine underwater submarine, to demonstrate mainly to Asia, that we can do that,” he said, stressing that it was just a theory.

Mystery Missile Launch Seen off Calif. Coast

A mysterious missile launch off the southern California coast was caught by CBS affiliate KCBS's cameras Monday night, and officials are staying tight-lipped over the nature of the projectile.

CBS station KFMB put in calls to the Navy and Air Force Monday night about the striking launch off the coast of Los Angeles, which was easily visible from the coast, but the military has said nothing about the launch.

KFMB showed video of the apparent missile to former U.S. Ambassador to NATO Robert Ellsworth, who is also a former Deputy Secretary of Defense, to get his thoughts.

"It's spectacular... It takes people's breath away," said Ellsworth, calling the projectile, "a big missile".

Magnificent images were captured by the KCBS news helicopter in L.A. around sunset Monday evening. The location of the missile was about 35 miles out to sea, west of L.A. and north of Catalina Island.

A Navy spokesperson told KFMB it wasn't their missile. He said there was no Navy activity reported in the area Monday evening.

On Friday night, Vandenberg Air Force Base, in California, launched a Delta II rocket, carrying an Italian satellite into orbit, but a sergeant at the base told KFMB there had been no launches since then.

Ellsworth urged American to wait for definitive answers to come from the military.

When asked, however, what he thought it might be, the former ambassador said it could possibly have been a missile test timed as a demonstration of American military might as President Obama tours Asia.

"It could be a test-firing of an intercontinental ballistic missile from a submarine ... to demonstrate, mainly to Asia, that we can do that," speculated Ellsworth.

Ellsworth said such tests were carried out in the Atlantic to demonstrate America's power to the Soviets, when there was a Soviet Union, but he doesn't believe an ICBM has previously been tested by the U.S. over the Pacific.

Officially, at least, the projectile remains a mystery missile.
