Many of you have probably seen that even the Washington Post is admitting to complete failure for Ukraine, NATO, and the US in their so-called "counteroffensive".

More than a week after the start of Ukraine's much-hyped counteroffensive, which Kyiv and its Western supporters say will push the Russian invaders back to pre-invasion lines, there are signs that Ukraine is unlikely to achieve lightning gains.

Russia's military failures last year created a misperception of weakness. Offensive operations are far more difficult and attacking armies suffer far more casualties than the defending side.

"The Russians are fighting on well-prepared positions and have accumulated a sufficient amount of artillery ammunition, plus they have more drones... "

"There are so many minefields in front of positions and many kilometers away from them, on the roads, in the fields, and it's really difficult,"

"And a lot of Ukrainian breaching equipment has been destroyed already, so trying to cut through all these mines is a real challenge. **That's the first line of defense.**"

Then come the drones. Pro-war Russian bloggers and reporters have gleefully posted video clips of Lancet drones smashing Western materiel on a near-daily basis over the past two weeks.

Russian forces are also using aviation more actively.

President Vladimir Putin boldly asserted that Ukraine's combat losses were "ten times higher" than Russia's casualties.

“I don’t see panic anywhere on the Russian lines.”

Ukrainian army is still facing its main test: breaking through to Russian lines and persevering in large-scale infantry fighting.

See [this](#).

In other words:

Ukraine is being hammered by drones, by air attacks, by artillery, led to their destruction through enormous minefields which they cannot clear - and after two weeks of enormous losses and useless efforts, Ukraine hasn’t even once broken into Russia’s first line of defensive positions. And all this in spite of NATO having given Ukraine everything they could in advanced equipment (Leopard 2, Challengers, Bradleys, M777, Storm Shadow), in NATO training, NATO officers on the ground (several killed in Russian airstrikes), US military AI software like Paladir, and US spy satellites giving Ukraine live-feed of the situation on the ground. And Ukraine hasn’t even “broken through” to Russia’s *first* line of defense. Ukraine tries to attack without air defense. Ukraine also tries to attack with big inferiority in artillery power. And Ukraine tries to attack through minefields which they don’t know and which they don’t have the equipment to clear. Ukraine is already caught up and destroyed in what Russia calls the “flexible zone” in front of its first defensive lines. All of NATO was for nothing.

There you have it.

No wonder that Western voices in “Ukraine Pravda” talking about “making a pause” in Ukraine’s suicidal “offensive” efforts - it’s just a losing circus. See [this](#).

Everything NATO does is to murder Ukrainian men on the frontlines.

Ukraine is wasted.
