*VAERS data released Friday by the Centers for Disease Control and Prevention show 1,371,474 reports of adverse events from all age groups following COVID-19 vaccines, including 29,981 deaths and 249,116 serious injuries between Dec. 14, 2020, and July 29, 2022.*

The Centers for Disease Control and Prevention (CDC) today released new data showing a total of [1,371,474 reports of adverse events](#) following [COVID-19](#) vaccines were submitted between Dec. 14, 2020, and July 29, 2022, to the Vaccine Adverse Event Reporting System (VAERS). That’s an increase of 13,534 adverse events over the previous week.

VAERS is the primary government-funded system for reporting adverse vaccine reactions in the U.S.

The data included a total of [29,981 reports of deaths](#) — an increase of 191 over the previous week — and [249,116 serious injuries](#), including deaths, during the same time period — up 1,430 compared with the previous week.

Of the 29,981 reported deaths, [19,348 cases](#) are attributed to Pfizer’s COVID-19 vaccine, [7,981 cases](#) to Moderna, [2,603 cases](#) to Johnson & Johnson (J&J) and [no cases](#) yet reported for Novavax.

Excluding “[foreign reports](#)” to VAERS, [851,372 adverse events](#), including [13,894 deaths](#) and [87,050 serious injuries](#), were reported in the U.S. between Dec. 14, 2020, and July 29, 2022.

[Foreign reports](#) are reports foreign subsidiaries send to U.S. vaccine manufacturers. Under U.S. Food and Drug Administration (FDA) regulations, if a manufacturer is notified of a foreign case report that describes an event that is both serious and does not appear on the

product’s labeling, the manufacturer is required to submit the report to VAERS.

Of the 13,894 U.S. [deaths reported](#) as of July 29, 7% occurred within 24 hours of vaccination, 15% occurred within 48 hours of vaccination and 54% occurred in people who experienced an [onset of symptoms](#) within 48 hours of being vaccinated.

In the U.S., 603 million COVID-19 vaccine doses had been administered as of July 27, [including](#) 357 million doses of Pfizer, 227 million doses of Moderna and 19 million doses of Johnson & Johnson (J&J).

From the 7/29/2022 release of VAERS data:

### Found 1,371,474 cases where Vaccine is COVID19

[Government Disclaimer on use of this data](#)

Table

 Event Outcome	 Count	 Percent
Death	29,981	2.19%
Permanent Disability	56,021	4.08%
Office Visit	201,489	14.69%
Emergency Room	121	0.01%
Emergency Doctor/Room	132,951	9.69%
Hospitalized	170,749	12.45%
Hospitalized, Prolonged	426	0.03%
Recovered	353,277	25.76%
Birth Defect	1,134	0.08%
Life Threatening	33,247	2.42%
Not Serious	643,486	46.92%
<b>TOTAL</b>	<b>† 1,622,882</b>	<b>† 118.33%</b>

† Because some cases have multiple vaccinations and symptoms, a single case can account for multiple entries in this table. This is why the Total Count is greater than 1,371,474 (the number of cases found), and the Total Percent is greater than 100.

Every Friday, [VAERS](#) publishes vaccine injury reports received as of a specified date. Reports submitted to VAERS require further investigation before a causal relationship can be confirmed.

Historically, VAERS has been shown to report only [1% of actual vaccine adverse events](#).

#### U.S. VAERS data from Dec. 14, 2020, to July 29, 2022, for 6-month-olds to 5-year-olds show:

- [2,622 adverse events](#), including [81 cases rated as serious](#) and [3 reported deaths](#).
- [4 reports](#) of myocarditis and pericarditis (heart inflammation).The CDC uses a [narrowed case definition](#) of “myocarditis,” which [excludes cases](#) of cardiac arrest, [ischemic strokes](#) and deaths due to heart problems that occur before one has the chance to go to the emergency department.
- [15 reports](#) of blood clotting disorders.
- [25 reports](#) of seizures.

#### U.S. VAERS data from Dec. 14, 2020, to July 29, 2022, for 5- to 11-year-olds show:

- [12,379 adverse events](#), including [315 rated as serious](#) and [9 reported deaths](#).
- [24 reports](#) of myocarditis and pericarditis.
- [47 reports](#) of blood clotting disorders.
- [102 reports](#) of seizures.

**U.S. VAERS data from Dec. 14, 2020, to July 29, 2022, for 12- to 17-year-olds show:**

- [32,910 adverse events](#), including [1,850 rated as serious](#) and [45 reported deaths](#).

The most recent report of a death in the 12- to 17-year-old age group was that of a 17-year-old male from Pennsylvania (VAERS I.D. [2396146](#)) who died from [lymphocytic myocarditis](#) approximately five months after receiving his first dose of Pfizer. The patient had no relevant medical history, according to the report.

The report states the “patient was just hanging with buddies at a soccer game, patient just collapsed, just died right there, EMT rushed patient to hospital and tried 42 minutes of CPR — nothing happened. Once autopsy was done, the patient definitely had myocarditis, and think it was lymphocytic myocarditis.”

The patient did not receive any other vaccine within four weeks of his first dose of Pfizer. The batch and lot number have been requested and “will be submitted if and when received.” However, this information will not be available to the public.

According to the CDC, “VAERS data [available to the public](#) include only the initial report data to VAERS. Updated data which contains data from medical records and corrections reported during follow up are used by the government for analysis. However, for numerous reasons including data consistency, these amended data are not available to the public.”

- [63 reports](#) of anaphylaxis among 12- to 17-year-olds where the reaction was life-threatening, required treatment or resulted in death — with 97% of cases attributed to [Pfizer’s vaccine](#).
- [658 reports](#) of myocarditis and pericarditis with [645 cases](#) attributed to Pfizer’s vaccine.
- [165 reports](#) of blood clotting disorders with all cases attributed to Pfizer.
- [20 cases](#) of postural orthostatic tachycardia syndrome (POTS) with [all cases](#) attributed to Pfizer’s vaccine.

**U.S. VAERS data from Dec. 14, 2020, to July 29, 2022, for all age groups combined, show:**

- 20% of deaths were related to cardiac disorders.
- 55% of those who died were male, 41% were female and the remaining death reports did not include the gender of the deceased.
- The [average age](#) of death was 73.
- As of July 29, [5,684 pregnant women](#) reported adverse events related to COVID-19 vaccines, including [1,777 reports of miscarriage or premature birth](#).
- Of the [3,629 cases of Bell’s Palsy](#) reported, 51% were attributed to [Pfizer](#) vaccinations, 40% to [Moderna](#) and 8% to [J&J](#).
- [907 reports of Guillain-Barré syndrome](#), with 42% of cases [attributed to Pfizer](#), 30% to [Moderna](#) and 27% to [J&J](#).

- [2,298 reports](#) of anaphylaxis where the reaction was life-threatening, required treatment or resulted in death.
- [1,750 reports](#) of myocardial infarction.
- [14,303 reports](#) of blood-clotting disorders in the U.S. Of those, [6,401 reports](#) were attributed to Pfizer, [5,145 reports](#) to Moderna and [2,722 reports](#) to J&J.
- [4,287 cases](#) of myocarditis and pericarditis with [2,627 cases](#) attributed to Pfizer, [1,456 cases](#) to Moderna and [188 cases](#) to J&J.
- [14 cases](#) of Creutzfeldt-Jakob disease with [8 cases](#) attributed to Pfizer, [5 cases](#) to Moderna and [1 case](#) to J&J.
- [272 cases](#) of POTS with [167 cases](#) attributed to Pfizer, [87 cases](#) to Moderna and [17 cases](#) to J&J.

[Children's Health Defense](#) (CHD) asks anyone who has experienced an adverse reaction, to any vaccine, to file a report following [these three steps](#).

## **South Africa confirms first death caused by J&J shot**

South Africa's health regulator on Thursday confirmed a person [died from Guillain-Barré syndrome](#) (GBS) caused by J&J's COVID-19 vaccine. It is the country's first death officially attributed to a COVID-19 vaccine, officials said.

GBS is a [rare neurological disorder](#) in which the body's immune system mistakenly attacks part of its peripheral nervous system, the network of nerves located outside of the brain and spinal cord.

GBS symptoms can range from mild, brief muscle weakness to paralysis, leaving the patient unable to breathe independently.

According to South African health authorities, the person who died [developed symptoms](#) shortly after receiving J&J's vaccine, which led to prolonged hospitalization, mechanical ventilation, further infections and death. No other cause for the GBS could be identified.

To protect patient confidentiality, no patient details, including the province where the death occurred, will be made public.

## **Family of 27-year-old who died after AstraZeneca shot weighs legal action**

The UK family of a 27-year-old engineer who [died from catastrophic brain bleeds](#) after receiving AstraZeneca's COVID-19 vaccine is considering legal action, pending an upcoming preliminary review of their son's case.

Jack Last, who was vaccinated March 30, 2021, died three weeks after receiving the AstraZeneca jab. A CT scan on April 10, 2021, revealed Last had developed a [cerebral venous sinus thrombosis](#), which occurs when a blood clot forms in the brain's venous sinuses and prevents blood from draining out of the brain.

Last died at Addenbrooke's Hospital in Cambridge, UK, on April 20, 2021 — 11 days after he sought medical treatment for severe headaches.

His family retained legal counsel after raising concerns about the circumstances leading to

Jack's death, the [East Anglian Daily Times reported](#).

A pre-inquest review will be held on August 11, after which a full inquest will be scheduled. An [inquest](#) is a formal investigation conducted by a coroner in order to determine how someone died. The purpose of an inquest is limited to establishing the identity of the deceased individual as well as where, when and how they died.

## **Woman feels 'like the walking dead' after COVID vaccine injuries**

In an [exclusive interview](#) with The Defender, Catherine Parker, 48, said she had a complete and fulfilling life prior to receiving her first dose of a COVID-19 vaccine on April 1, 2021.

Within two weeks of receiving the J&J shot, Parker said she began to have chronic fatigue and insomnia, but doctors said her symptoms were related to menopause. After receiving a Pfizer booster on Nov. 9, 2021, her symptoms worsened. Her hair began to fall out, she had brain fog and she developed uncontrollable tremors, spasms and migraines to the point she couldn't walk or communicate.

Parker developed a "laundry list of ailments" and tested positive for the [Epstein-Barr virus](#), despite "never [having] had mono in my entire life," and for [antinuclear antibodies](#) and kidney abnormalities.

Parker's symptoms — and the dismissive attitude of much of the medical establishment — led her to start the [Vaccine Injury/Side Effects Support Group](#) on Facebook earlier this year.

In addition, Parker has presented her personal story on social media platforms, including [Facebook](#), [YouTube](#) and [TikTok](#), and launched an online [crowdfunding campaign](#) to help support her rising medical costs.

The Defender interviewed three other people injured by COVID-19 vaccines who are members of Parker's group. [Read their stories here](#).

## **EMA says Novavax COVID vaccine must carry warning for heart inflammation**

The European Medicines Agency (EMA) Wednesday recommended [adding a warning](#) for two types of heart inflammation to Novavax's COVID-19 vaccine, marketed under the brand names Nuvaxovid and Covovax, based on a small number of cases reported in those who received the vaccine.

According to a [statement](#), the EMA's [Pharmacovigilance Risk Assessment Committee](#) — responsible for assessing and monitoring the safety of human medicines — concluded that "myocarditis and pericarditis can occur following vaccination with Nuvaxovid."

"The Committee is therefore recommending listing myocarditis and pericarditis as new side effects in the product information for Nuvaxovid, together with a warning to raise awareness among healthcare professionals and people receiving this vaccine," the statement said.

The committee also requested the "marketing authorization holder of Nuvaxovid [provides additional data](#) on risk of side effects occurring."

According to [Reuters](#), the FDA flagged Novavax's risk of heart inflammation in early June.

Yet, the agency on July 13 [granted Novavax's request](#) for Emergency Use Authorization of the vaccine for adults 18 and over in the U.S.

## **The Worldwide Corona Crisis, Global Coup d'Etat Against Humanity**

**by Michel Chossudovsky**

Michel Chossudovsky reviews in detail how this insidious project “destroys people’s lives”. He provides a comprehensive analysis of everything you need to know about the “pandemic” — from the medical dimensions to the economic and social repercussions, political underpinnings, and mental and psychological impacts.

*“My objective as an author is to inform people worldwide and refute the official narrative which has been used as a justification to destabilize the economic and social fabric of entire countries, followed by the imposition of the “deadly” COVID-19 “vaccine”. This crisis affects humanity in its entirety: almost 8 billion people. We stand in solidarity with our fellow human beings and our children worldwide. Truth is a powerful instrument.”*
