Considering the large number of times that a false flag attack has occurred at or around the same time as a military drill or a civilian emergency preparation drill in the past, it is understandable that many researchers, activists, and otherwise well-informed observers become concerned whenever such drills are scheduled.

This very reason is perhaps why many are raising their eyebrows at a drill scheduled for today and Wednesday (September 16-17) in Nebraska which simulates a nuclear explosion near I-80 in the vicinity of Scottsbluff.

[As reported by the local ABC News affiliate KOTA News](#), Regional West Medical Center is scheduled to participate in the drill in the capacity of training to decontaminate victims, ensure accurate reporting, and treating injuries.

The drill is part of a larger exercise involving 21 government agencies.

Emergency Preparedness Coordinator Dave Edwards stated that “Every time we do an exercise, it is to test our plans. Not necessarily how the staff reacts, but are our plans in place correct.”

Last year, the same hospital worked with staff to prepare for a live shooter scenario.

While it is important to stress that this writer is not predicting a false flag event during the time of this scheduled exercise, it is also important to stress the prevalence of such drills in false flag operations.

Without a doubt, the mainstream media and U.S. government has been attempting to reinforce the possibility that ISIS or other terrorists may engage in nuclear attacks here in the United States as [a type of predictive programming](#).

Indeed, one [hallmark of the false flag operation](#) is the running of drills shortly before or during the actual attack. Many times, these drills will involve the actual sequence of events that takes place during the real life attack. These drills have been present on large-scale false flags such as 9/11 as well as smaller-scale attacks [like the Aurora shooting](#).

For instance, as Webster Tarpley documents in his book [9/11 Synthetic Terror: Made In USA](#),

at least 46 drills were underway in the months leading up to 9/11 and on the morning of the attack. These 46 drills were all directly related to the events which took place on 9/11 in some way or other.[1] Likewise, the [7/7 bombings in London were running drills](#) of exactly the same scenario that was occurring at exactly the same times and locations.

Although one reason may take precedence over the other depending on the nature and purpose of the operation, drills are used by false flag operators for at least two reasons. One such purpose is the creation of intentional confusion if the drill is taking place during the actual attack. The other, more effective aspect, however, is using the drill as a cloak to plan the attack or even “go live” when it comes time to launch the event. Even more so, it gives the individuals who are involved in the planning of the event an element of cover, especially with the military/intelligence agency’s tight chain of command structure and need-to-know basis. If a loyal military officer or intelligence agent stumbles upon the planning of the attack, that individual can always be told that what he has witnessed is nothing more than the planning of a training exercise. This deniability continues all the way through to the actual “going live” of the drill. After the completion of the false flag attack, Coincidence Theory is used to explain away the tragic results.[2]
