This was first published in May 2021.

“The risk-benefit calculus is therefore clear: the experimental vaccines are needless, ineffective and dangerous. Actors authorizing, coercing or administering experimental COVID-19 vaccination are exposing populations and patients to serious, unnecessary, and unjustified medical risks.” [Doctors for Covid Ethics](#), April 29, 2021

An explosive new study by researchers at the prestigious Salk Institute casts doubt on the current crop of gene-based vaccines that may pose a grave risk to public health. The article, which is titled “[The novel coronavirus’ spike protein plays additional key role in illness](#)”, shows that SARS-CoV-2’s “distinctive ‘spike’ protein”..“damages cells, **confirming COVID-19 as a primarily vascular disease.**” While the paper focuses strictly on Covid-related issues, it unavoidably raises questions about the new vaccines that contain billions of spike proteins that could greatly increase the chances of severe illness or death. Here’s an excerpt from the article dated April 30, 2021:

“In the new study, the researchers created a **“pseudovirus” that was surrounded by SARS-CoV-2 classic crown of spike proteins, but did not contain any actual virus. Exposure to this pseudovirus resulted in damage to the lungs and arteries of an animal model—proving that the spike protein alone was enough to cause disease.** Tissue samples showed inflammation in endothelial cells lining the pulmonary artery walls. (Note- “Vascular endothelial cells line the entire circulatory system, from the heart to the smallest capillaries.”)

The team then replicated this process in the lab, exposing healthy endothelial cells (which line arteries) to the spike protein. They showed that **the spike protein damaged the cells** by binding ACE2. This binding disrupted ACE2’s molecular signaling to mitochondria (organelles that generate energy for cells), causing the mitochondria to become damaged and fragmented.

Previous studies have shown a similar effect when cells were exposed to the SARS-CoV-2 virus, but **this is the first study to show that the damage occurs when cells are exposed to the spike protein on its own.** (“[The novel coronavirus’ spike protein plays additional key role in illness](#)”, Salk.edu)

The new research paper is the equivalent of a hydrogen bomb. It changes everything by confirming what vaccine critics have been theorizing for months but were unable to prove.

Now there is solid evidence that:

1. **Covid-19 is primarily a disease of the vascular system** (The vascular system, also called the circulatory system, is made up of the vessels that carry blood and lymph through the body.) and not the respiratory system.
2. **The main culprit is the spike protein.** (Spike protein—"a glycoprotein that protrudes from the envelope of some viruses" Merriam-Webster "Like a key in a lock, these spike proteins fuse to receptors on the surface of cells, allowing the virus's genetic code to invade the host cell, take over its machinery and replicate." Bruce Lieberman)

Simply put, if Covid-19 is primarily a vascular disease and if the main instrument of physical damage is the spike protein, then why are we injecting people with billions of spike proteins?

Here's how architect and author, Robin Monotti Graziadei, summed up these developments on YouTube:

"So, we have been told for the last year, that the only role **the spike protein** was supposed to play was to enter the human cells. (But) It's clear, that that is not what they do, (since) they give you illness, vascular illness. Vascular illness can have many manifestations. They can include sinus vein thrombosis, blood clots, bruising, and longer-term conditions. **Do you think it's a good idea to bypass the first (defenses) of your immune system, ...and inject... trillions of spike proteins in your cells given the information that has just been released by the Salk Institute? Think about it....**

Salk Institute researchers have told us -without any ambiguity- that the spike protein is a fundamental part of the Covid-19 disease. Yes, it's true that the spike protein with the N-protein, will not replicate. However, **trillions (of these proteins) induced by the vaccine injection have the capacity to create damage in your vascular system.** This is what the study says and what has been published by an extremely important center for biological studies. This is not a conspiracy theory. I think, at this stage, there is enough information to consider whether we will be told the truth in the coming days, because such information should be on the cover of every newspaper and the top story on every news channel. And what they should say is this: **"The fundamental and technological basis -on which all of the vaccines that were distributed in the West- is flawed. We thought that the spike protein would only enter the cells to create antibodies so if you faced the wild virus, it would not latch onto your cells, however, we were wrong. We were wrong because the spike protein in itself, creates disease, and if you inject trillions of them into a human body, there will be manifestations of disease in many cases."** It is not safe to inject trillions of spike proteins into a muscle, because it bypasses layers of your immune system which could have potentially neutralized the virus... **By crossing the threshold of the human body through the injection of these compounds, you are not giving your immune system the chance to mount a strong enough response to the spike protein in order to neutralize it.** (The vaccine) will have this disease-creating spike protein in it if you agree (to take) any

of these vaccines.It is now up to us to try to fix the mistake they have made.” ([Robin Monotti Graziadei on the new Salk Institute research paper](#), You Tube, -See it before it is removed)

Perfectly stated and right on the money. Graziadei extrapolates the hidden meaning of the Salk report and clarifies its significance. How are the public health officials, the politicians, the media and the rest of the pro-Covid Vaxx camp going to respond to these revelations especially with the imprimatur of the Salk Institute affixed to the front of the report? Will they try to sweep it under the rug or will they try to divert the public’s attention to the ‘variant’ hobgoblin? Or will they try something else entirely, like claim that one class of spike proteins are good for you while others lead to protracted illness and death? What will they do?

Doctor Vladimir Zelenko, who has been nominated for a Nobel Peace Prize for his use of hydroxychloroquine in the treatment of COVID-19 patients, had this to say:

“Do you understand what this means——we are are injecting viral genetic code for the spike protein into innocent people andilt gets into almost every cell In the body.” (Nobel nominee, Zelenko has also been banned from Twitter.)

Indeed, that’s precisely what they’ve done. And, let’s not forget, the vaccine manufacturers have complete legal immunity for the injuries they produce. Legal immunity means moral impunity.

So what effect will these spike proteins have on the people that have gotten vaccinated?

Here’s what the Doctors for Covid Ethics have to say in their latest article that was published just this week:

“The vaccines are dangerous to both healthy individuals and those with pre-existing chronic disease, for reasons such as the following: risk of lethal and non-lethal disruptions of blood clotting including bleeding disorders, thrombosis in the brain, stroke and heart attack; autoimmune and allergic reactions; antibody-dependent enhancement of disease; and vaccine impurities due to rushed manufacturing and unregulated production standards....

...all gene-based vaccines can be expected to cause blood clotting and bleeding disorders.... The vaccines are not safe.”([“COVID Vaccines: Necessity, Efficacy and Safety”](#), Doctors for Covid Ethics)

There it is in black and white: “The vaccines are not safe”. Here’s more from an article at Children’s Health Defense about Professor Yehuda Shoenfeld, the Israeli clinical immunologist who is widely credited as the “father of autoimmunity.” Shoenfeld approaches the issue from an entirely different angle. Take a look:

“Shoenfeld’s primary concern boils down to what’s called molecular mimicry. There are a number of genetic sequences that are identical both in the human genome and that of SARS-CoV-2 ...

The immunologists go on to draw particular attention to the identical sequences in a specific group of proteins found deep in the lungs (the site of ARDS/covid pneumonia)...

This is a concern Shoenfeld ...

It's why Shoenfeld and colleagues have been banging on the drum during the vaccine development phase last year, arguing that **peptide sequences used in the new vaccines should be unique and not be common to ones found in the body.**

For a predisposed individual, an adverse reaction to the vaccine, Shoenfeld and colleagues argue, could be enough for them to be tipped over the edge — into autoimmune disease. One of the most obvious signals for predisposition is to already have one of the over 100 autoimmune diseases that are charging through industrialized societies. Yet, with the father of autoimmunity sounding the warnings of autoimmune risks, there is scarcely a word of caution being uttered by governments rolling out the mass vaccination programs. Shame on them." (["Are We on the Verge of a 'Super-Epidemic' of Autoimmune Diseases?"](#) Children's Health Defense)

My limited understanding of "molecular mimicry", is this: By injecting proteins into the body that are so similar to the Covid proteins that are wreaking havoc in the vascular system, we could trigger a situation in which the body's immune system attacks its own organs or vascular system. Which is why the author asks: Are We on the Verge of a 'Super-Epidemic' of Autoimmune Diseases?

In earlier articles, we presented the views of scientists and medical professionals who anticipated the issues that are now emerging in relation to the spike protein. For example, here is an excerpt from a piece about pediatric rheumatologist, Dr. J. Patrick Whelan, who said the following in a letter to the FDA:

"I am concerned about the possibility that the new vaccines aimed at creating immunity against the SARS-CoV-2 spike protein **have the potential to cause microvascular injury to the brain, heart, liver and kidneys in a way that does not currently appear to be assessed in safety trials of these potential drugs....**

"Before any of these vaccines are approved for widespread use in humans, it is important to assess in vaccinated subjects the effects of vaccination on the heart. As important as it is to quickly arrest the spread of the virus by immunizing the population, **it would be vastly worse if hundreds of millions of people were to suffer long-lasting or even permanent damage to their brain or heart microvasculature as a result of failing to appreciate in the short-term an unintended effect of full-length spike protein-based vaccines on these other organs.**" (["Scientists Challenge Health Officials on Vaccinating People Who Already Had COVID"](#), Global Research)

We also pointed out that "gene-based vaccines release a spike protein that spreads throughout the body, gets trapped in the bloodstream and collects in the layer of cells (endothelial cells) that coat the blood vessels." We think the new research by the Salk Institute supports this general theory.

Also, according to Dr. Hyung Chun, a Yale cardiologist, the cells "release inflammatory cytokines that further exacerbate the body's inflammatory response and lead to the formation of blood clots. Chun has stated: "The 'inflamed' endothelium likely contributes not only to worsening outcome in COVID-19, but also is considered to be an important factor contributing to risk of heart attacks and strokes."

This seems to suggest that the spike protein from the vaccine can have the same effect as the spike protein from the infection. Here's more:

"Individuals with COVID-19 experience a vast number of neurological symptoms, such as headaches, ataxia, impaired consciousness, hallucinations, stroke and cerebral hemorrhage. But **autopsy studies have yet to find clear evidence of destructive viral invasion into patients' brains**, pushing researchers to consider alternative explanations of how SARS-CoV-2 causes neurological symptoms...."

If not viral infection, what else could be causing injury to distant organs associated with COVID-19?

The most likely culprit that has been identified is the COVID-19 spike protein released from the outer shell of the virus into circulation. Research cited below has documented that the viral spike protein is able to initiate a cascade of events that triggers damage to distant organs in COVID-19 patients.

Worryingly, several studies have found that **the spike proteins alone have the capacity to cause widespread injury throughout the body, without any evidence of virus.**

What makes this finding so disturbing is that **the COVID-19 mRNA vaccines** manufactured by Moderna and Pfizer and currently being administered throughout the U.S. **program our cells to manufacture this same coronavirus spike protein as a way to trigger our bodies to produce antibodies to the virus.**" ("[Could Spike Protein in Moderna, Pfizer Vaccines Cause Blood Clots, Brain Inflammation and Heart Attacks?](#)" Global Research)

The above quote is key to grasping what Covid really is and why the new vaccines threaten to greatly exacerbate the problem. As Chun says:

"...autopsy studies have yet to find clear evidence of destructive viral invasion into patients' brains, pushing researchers to consider alternative explanations of how SARS-CoV-2 causes neurological symptoms...."

This observation is correct. The research does not indicate "viral invasion into patients' brains".

Why? Because-as the Salk report indicates- it is not the viral infection that is getting into the brain but the spike protein that has passed the blood-brain barrier via the vascular system.

Here's Dr Chun again: "What else could be causing injury to distant organs associated with COVID-19?"

Once again, it is not the virus but the spike protein and the autoimmune response.

Finally, Chun acknowledges that **the new vaccines "program our cells to manufacture this same coronavirus spike protein as a way to trigger our bodies to produce antibodies to the virus."**

The production and distribution of these potentially-lethal injections goes way beyond mere

recklessness. This is an unprecedented global catastrophe that could result in the deaths of millions. How long will this insanity continue?
