

No gatherings of friends and families: the Covid Omicron fraud used to justify the “Christmas and New Year lockdown”: François Legault’s curfew

Several Western governments have put in place curfews and restrictions that prevent families and friends from celebrating the New Year.

*Absurd political statements abound. Politicians are emphasizing the looming dangers of the so-called “**deadly Covid-19 Omicron variant**”, despite the fact that Omicron is one of many variants of the SARS-CoV-2 virus. This was confirmed by the WHO two days later following [the omicron announcement dated November 26, 2021](#) :*

[According to the WHO](#), (28.11.21) “There is currently no information to suggest that the symptoms associated with Omicron are different from those of other variants. ”

Transmissibility: It is not yet clear whether Omicron is more transmissible (e.g., more easily spread from person to person) compared to other variants, including Delta. The number of people testing positive has risen in areas of South Africa affected by this variant, but epidemiologic studies are underway to understand if it is because of Omicron or other factors.

Severity of disease: It is not yet clear whether infection with Omicron causes more severe disease compared to infections with other variants, including Delta. Preliminary data suggests that there are increasing rates of hospitalization in South Africa, but this may be due to increasing overall numbers of people becoming infected, rather than a result of specific infection with Omicron. There is currently no information to suggest that symptoms associated with Omicron are different from those from other variants. Initial reported infections were among

The Omicron is “Super-Mild”

MONDAY 06 DECEMBER 2021 9:00 AM

Sigh of relief in South Africa as Omicron variant appears to be ‘super mild’ mutation with Covid death rate not jumping

Media disinformation prevails. According to CNN, citing expert opinion:

The Omicron variant “is extraordinarily contagious”, and if you are in a crowd now, and certainly if you are not vaccinated, you are at great risk of contracting this virus “,

A small party at a friend’s house should be okay **if everyone is vaccinated, boosted and tested negative before the party** ,... Large outdoor parties are less risky unless they are crowded.

“I will not eat in a restaurant now without a mask”

“I absolutely will not go to a bar. ” Emphasis added.

The Role of the Corrupt Politicians

Statements by politicians as well as media reports aim to **create social divisions between “vaccinated” and “unvaccinated”**.

According to **Dr. Anthony Fauci** who is behind the Omicron scam:

People should avoid large New Year’s gatherings **where they do not know the immunization status of guests**... Small gatherings of immunized family or close friends are safe.

Governments (in the grip of financial power) tell us over and over again that these restrictions are being enacted in order to **“save lives”** and protect people from infection with the “deadly” variant Omicron.

These same governments then put pressure on millions of people to receive the “Booster” of the vaccine.

And now we know, amply documented, that **the mRNA jab is a “killer vaccine”** which has already resulted in countless deaths and injuries worldwide.

While official data on mortality and morbidity are available, the media present the “vaccine” as the solution to end the (alleged) pandemic.

The fear campaign wins.

Governments also point to a “dangerous” increase in “confirmed cases of Covid-19” during

the Christmas holidays without acknowledging that an increase in RT-PCR positive cases at this time of year indicates **a higher incidence of seasonal influenza and the (corona) “common cold”**.

François Legault’s Curfew

In Quebec, **Prime Minister François Legault** ordered off the cuff overnight a night curfew as of December 31, 2021 (from 10 p.m. to 5 a.m.).

Press conference by Premier of Quebec Legault. He announced the curfew on December 30 to be implemented the next day .

The justification for this decision, which **compromises the New Year’s celebrations for 8.5 million Quebecers**, according to Prime Minister Legault, consists in **“slowing down the spread of the Omicron variant”**.

And here is the detail of the Legault directive:

According to the official notice sent to Quebecers at 7 p.m. (December 31, 2021) (on their cellphones):

“Forbidden to be outside your home or property ...

Increased police surveillance”

Deliberate destabilization of civil society

The social, cultural and economic impacts of these measures put forth by Mr. Legault are unequivocal. They are devastating. Suspension of classes in primary and secondary schools, closure of places of worship ...

Quebecers are prevented from socializing, which constitutes a violation of their fundamental rights. The entire urban social landscape is in turmoil.

Thanks to Mr. Legault , the New Year’s curfew and restrictions have contributed to a new wave of bankruptcies of bars and restaurants.

Lies

The more you test, the more you generate positive cases. And these figures are then cited by the government to justify their far-reaching decisions.

Is the RT-PCR test used to generate the data for “confirmed covid-19 cases” reliable? Does it detect the omicron variant?

Is the Legault government aware of the fact that in the United States, **the RT-PCR test has been withdrawn** by the Centers for the prevention and fight against diseases (CDC) (as of December 31, 2021)?

The CDC appears to acknowledge (of course with usual innuendos) that the RT-PCR test **does not consistently differentiate between Covid-19 and seasonal influenza. This means that the positive covid-19 figures** listed and cited by government authorities **are erroneous.**

07/21/2021: Lab Alert: Changes to CDC RT-PCR for SARS-CoV-2 Testing

Audience: Individuals Performing COVID-19 Testing

Level: Laboratory Alert

After December 31, 2021, CDC will withdraw the request to the U.S. Food and Drug Administration (FDA) for Emergency Use Authorization (EUA) of the CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel, the assay first introduced in February 2020 for detection of SARS-CoV-2 only. CDC is providing this advance notice for clinical laboratories to have adequate time to select and implement one of the many FDA-authorized alternatives.

Extensively documented and analyzed by many scientists, **the RT-PCR test does not detect or identify SARS-CoV-2 and its variants including omicron.**

In January 2021, “ The World Health Organization (WHO) [questioned its own guideline for the RT-PCR test](#) which was proposed (by the WHO) in January 2020, endorsed and implemented by the governments of WHO Member States. “

“The contentious issue concerns the number of cycles of the amplification threshold (Ct). The WHO as of January 2021 retracts and **now asks governments to repeat the test** if the amplification (Ct) standards (threshold) were applied at 35 cycles or above:> 35 cycles ”

**

May solidarity and human dignity prevail,

Truth is a peaceful weapon,

It's about breaking the official Covid Narrative, a fragile consensus based on lies,

Our thoughts and best wishes for the New Year
