

Numerous Violations of Disease Protocol Surrounding the Dallas, Texas Ebola Case

Emergency Manager Calls Federal Ebola Response A Stand Down

The numerous violations of disease protocol surrounding the Dallas, Texas Ebola case are intentional, according to an emergency response manager.

The manager, who was involved in the emergency response to both Hurricane Katrina and Rita in addition to planning for small pox outbreaks, said the official response to the first diagnosed case of Ebola in the United States purposely avoided the basic actions the government would take to prevent a virus from spreading.

"The reason I know the Ebola outbreak is being conducted on purpose is because it violates all protocol," he said.

The violations of protocol are almost too numerous to mention. For one thing, government officials were slow to decontaminate the apartment of Thomas Eric Duncan, the 40-year-old Liberian national who was the first diagnosed case of Ebola in the U.S.

Before the apartment was sanitized, however, [five Dallas Co. sheriff's deputies were ordered to enter the unit](#) without protective gear to remove Duncan's family members who were placed under quarantine.

Dallas Co. Sheriff's Association President Christopher Dyer said the deputies were uncomfortable with the order.

"They're very concerned," Dyer said to [WFAA 8](#). "Their families are concerned. You've got to go home and tell your spouse, 'Hey, I was just inside this house where a guy had Ebola.'"

The workers who were ordered to clean the sidewalk where Duncan vomited were [also not wearing protective clothing](#), despite the fact that Ebola spreads through bodily fluids.

And, like Duncan's apartment, officials were slow to decontaminate the ambulance which transported Duncan to the hospital, meaning that the homeless man who was transported in the ambulance after Duncan was potentially exposed to the disease.

The Obama administration also refused to ban travelers from Ebola-stricken African nations from entering the U.S., which allowed Duncan to fly to Dallas.

"The fact that [Ebola] being allowed to travel into the United States is insane and the fact that emergency operations have not been activated is insane and this is on purpose and by

design,” the emergency response manager stated. “There are many competent people in the CDC, the military and emergency management officers who need to blow the whistle.”

“They’re being ordered to stand down from the top.”

A former [CIA officer, Robert David Steele, warned of an Ebola false flag](#) a few weeks before Duncan’s diagnosis.
