Cancer begins when genetic changes interfere with the normal replication and replacement of cells in the body. Cells start to grow uncontrollably and may form a tumour. It is the No. 2 leading cause of death in the United States.

Unfortunately, it appears the disease may be on the rise thanks to the experimental Covid-19 injections. Because official U.S. Government data confirms the risk of developing cancer following Covid-19 vaccination increases by a shocking 143,233%.

The Centers for Disease Control (CDC) hosts a [Vaccine Adverse Event Reporting System \(VAERS\)](#) which contains historical data on adverse reactions reported against every vaccine that has been administered in the United States of America.

A quick search of the [CDC VAERS database](#) on the number of cancer cases reported as adverse reactions to the Covid-19 injections since they were first rolled out in the USA, reveals that from December 2020 up to 5th August 2022, a total of 2,579 adverse events related to cancer were made in just 1 year and 8 months.

Messages:

- ▶ VAERS data in CDC WONDER are updated every Friday. Hence, results for the same query can change from week to week.
- ▶ These results are for 2,579 total events.
- ▶ Rows with zero Events Reported are hidden. Use Quick Options above to show zero rows.

Year Reported ↓	→ Events Reported ↑↓	← Percent (of 2,579) ↑↓
2021	1,306	50.64%
2022	1,268	49.17%
Unknown Date	5	0.19%
Total	2,579	100.00%

Covid-19 Vaccines ([Source](#))

But performing a similar search of the [VAERS database](#) on the number of cancer cases reported as adverse events to all other available vaccines between 2008 and 2020, a period of 13 years, reveals there were just 791 adverse events related to cancer.

Messages:

▶ VAERS data in CDC WONDER are updated every Friday. Hence, results for the same query can change from week to week.
▶ These results are for 791 total events.

Year Reported ↓	Events Reported ↑↓	Percent (of 791) ↑↓
2008	59	7.46%
2009	50	6.32%
2010	37	4.68%
2011	33	4.17%
2012	41	5.18%
2013	57	7.21%
2014	55	6.95%
2015	47	5.94%
2016	61	7.71%
2017	71	8.98%
2018	81	10.24%
2019	99	12.52%
2020	100	12.64%
Total	791	100.00%

All other Vaccines ([Source](#))

Many would simply argue without backing their claim up with any evidence, that this is just because of the volume of Covid-19 injections administered compared to all other vaccines. But unfortunately, anyone who argues this is wrong.

We can see this by looking at the number of doses administered.

The following chart shows the total number of flu vaccine doses administered in 13 full flu seasons all the way from the 2008/2009 flu season to the 2019-2020 flu season. The data has been extracted from the CDC info found [here](#).

[Source](#)

In all between the 08/09 flu season and the 19/20 flu season, there were a total of 1,720,400,000 (1.7204 billion) doses of the flu jab administered in the USA.

The CDC also confirms that between 2008 and 2020, a period of 13 years, there were just 64 events related to cancer reported as adverse reactions to the influenza vaccines.

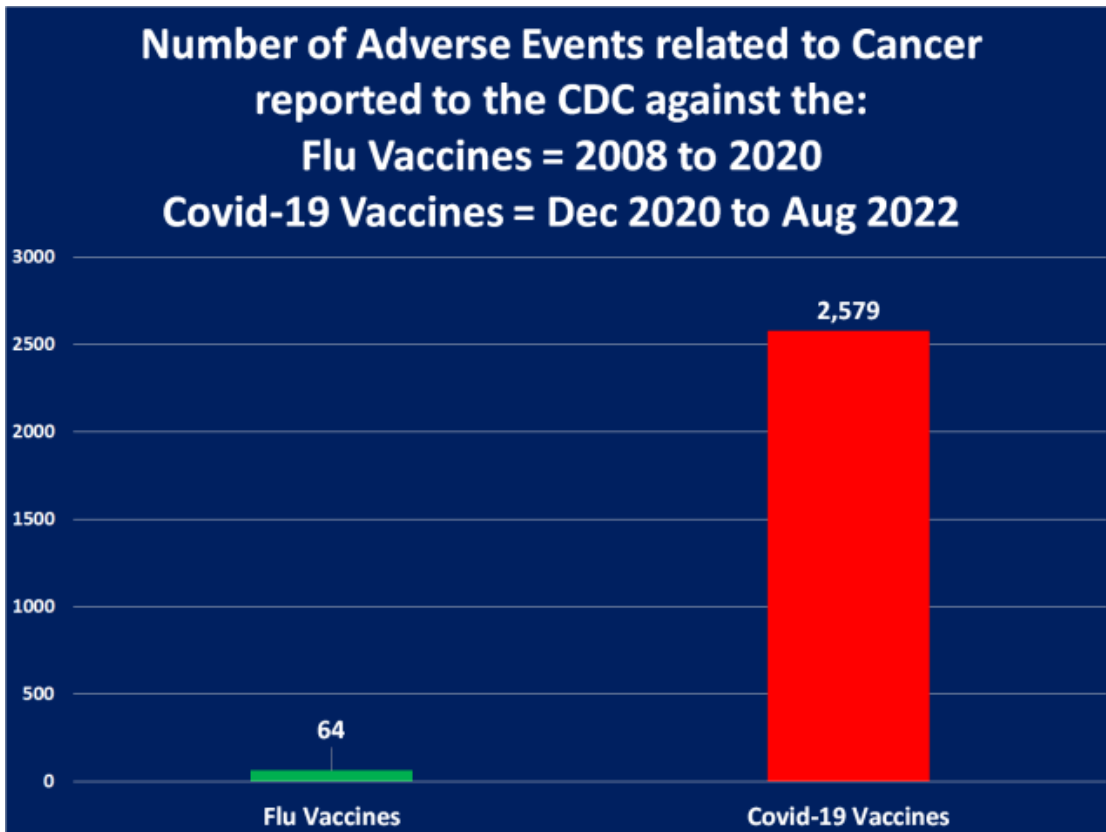

Messages:

- ▶ VAERS data in CDC WONDER are updated every Friday. Hence, results for the same query can change from week to week.
- ▶ These results are for 64 total events.

Year Reported ↓	Events Reported ↑↓	Percent (of 64) ↑↓
2008	6	9.38%
2009	4	6.25%
2010	6	9.38%
2011	5	7.81%
2012	4	6.25%
2013	1	1.56%
2014	3	4.69%
2015	4	6.25%
2016	6	9.38%
2017	10	15.62%
2018	7	10.94%
2019	3	4.69%
2020	5	7.81%
Total	64	100.00%

Flu Vaccines ([Source](#))

Based on the number of adverse events related to cancer alone, we can see that there have been 40.3x as many cancer cases related to Covid-19 vaccination than there have been related to flu vaccination.

But whilst shocking, this statistic doesn't properly represent the severity of the situation. To do that we need to know the number of cancer cases per 100,000 doses administered.

Based on the above numbers provided by the CDC, the number of adverse events related to cancer reported per 100,000 doses of flu vaccine administered equates to just 0.0003 per

100,000 doses.

According to ['Our World in Data'](#), as of 9th August 2022, 606 million doses of the Covid-19 vaccines have been administered in the USA. This means there have been actually nearly 3x as many flu vaccines administered between 2008-2020 than Covid-19 injections since the end of 2020, let alone all of the other vaccines that have been administered.

Vaccinations by location

Florida	39.1M	14.6M	68.9%
Pennsylvania	24.3M	8.99M	70.3%

[Source](#)

Therefore, the number of adverse events related to cancer reported per 100,000 doses of Covid-19 vaccine administered equates to 0.43 per 100,000 doses.

This means Covid-19 vaccination is 1433.33x / 143,233.33% more likely to cause cancer than flu vaccination. It can be argued that because the numbers are so extraordinarily low for the flu vaccine, that flu vaccination does not cause cancer. Therefore, it can be argued that the risk of developing cancer following Covid-19 vaccination is 1433x greater than the background risk.

This should however not come as much of a surprise considering we already have scientific proof that the Covid-19 mRNA injections can cause cancer of the ovaries, pancreas and breast.

The homologous recombination DNA repair pathway is one of the mechanisms that the body uses to stop your cells from turning cancerous in response to environmental stress.

And in October 2021, two revered scientists, called Jiang and Mei, had a paper published, after peer review, in [MDPI](#), showing that the SARS-Cov-2 spike protein obliterated the DNA repair mechanism in lymphocytes.

The viral spike protein was so toxic to this pathway that it knocked 90% of it out. If the whole spike protein got into the nucleus (in the ovaries), and enough of it was produced and hung around long enough before the body was able to get rid of it all, it would cause cancer.

Fortunately, in the case of natural infection, this is unlikely to occur. But the experimental mRNA “vaccines” induce spike protein to be produced in and around the cell nucleus and this occurs for at least 60 days and almost certainly longer.

This is probably why cases of ovarian cancer are now at an all-time high.

Official UK data published by Public Health Scotland, which can be found [here](#), reveal the number of women suffering ovarian cancer from the introduction of the Covid-19 injection to the general population. Unfortunately, the known trend in 2021 was significantly higher than 2020 and the 2017-2019 average.

Ovarian Cancer - [Source](#)

The above chart shows up to June 2021, but the charts found on Public Health Scotland’s dashboard now show figures all the way up to December 2021 and unfortunately reveal that the gap has widened even further with the number of women suffering from Ovarian cancer

increasing significantly.

Click here to [enlarge](#).

If you still wish to get a job that doesn't stop you from getting Covid-19, doesn't stop you from spreading Covid-19, increases your risk of mortality significantly (see [here](#)), and increases your risk of suffering cancer by 143,233% then that's up to you. But perhaps you can now be a little more understanding of why many others simply refuse to do so.
