We decided to wait a week and let the dust settle before writing about the new, super-scary Omicron (B.1.1.529) COVID-19 variant. All the jokes, quips and “coincidences” have run their course on social media.

Everybody and their mothers were trying to take credit for being the first to tweet that “[Omicron is an anagram for moronic](#)” after the variant’s [November 24 world premiere](#). Of course Twitter wouldn’t allow the “moronic” thing to trend. But you get the idea. Then a bunch of people pointed out the 1963 Italian film “Omicron.”

The movie, [according to IMDB](#), is about an alien that takes over a human’s body so it can learn about humanity and take over the planet. Reasonable people recognized the parallels of gene therapy taking over human bodies and turning them into GMO beings. But Hollywood telling us what the powers-that-be are planning is nothing new.

A Simpsons episode called “The Fool Monty” aired on November 21, 2010, almost 11 years exactly before the Omicron variant premiere. The episode was about TV executives creating a fearmongering campaign around a disease called “house cat flu.”

[Click here to watch the video.](#)

The Simpsons also warned us all about 9/11 in the September 21, 1997 episode “The City of New York vs. Homer Simpson.”

But I digress.

NBC News’ Lester Holt asked Fauci on November 26 (Black Friday) at the 1:04 mark if Omicron is the type of variant that keeps you up at night. Fauci responded, “you don’t want to frighten the American public, but...” This guy’s entire existence and job is fearmongering. He’s either oblivious, extremely arrogant, or both. But the funniest part of the interview comes when Holt asks Fauci about booster shots. Fauci perked up like a 13-year-old boy getting his first kiss from the cutest girl in class.

There’s simply no limit to clown world tactics in The Great Reset. A [December 3 BBC article](#) says that the only way to detect the Omicron variant is “full genetic analysis, which can take up to a couple of weeks.” So you’ll be long over the illness and healthy by the time they declare it was Omicron.

The political aspects surrounding this whole COVID-19 agenda are just sad and pathetic at this point. A November 30 YouGov survey found that 80% of self-identified Democrats are very concerned or somewhat concerned about Omicron. Only 35% of Republicans [expressed those same sentiments](#). Anybody denying that this entire COVID agenda isn’t political is simply a vaxx, mask and COVID-19 zealot.

Omicron will be the talk of mainstream media until the next extinction-level variant is introduced. Here are the facts we know about Omicron.

Botswana government confirms first Omicron cases were “fully vaccinated”

Not much analysis is needed here. Keep in mind this Omicron fraud is so silly that mainstream media [frequently interchange](#) its origin [between South Africa and Botswana](#). The Botswana official government Twitter account tweeted a press release on November 25. It stated that all four Omicron cases were “fully vaccinated for COVID-19.”

Read the [full press release here](#). Botswana tweeted another press release from its Ministry of Health and Wellness on November 26. All four cases were detected “in foreign nationals...on a diplomatic mission.”

Read the [full press release here](#). In sum, Omicron was first detected in fully vaccinated people who were not from Botswana.

Omicron is a “very mild” disease

Dr. Angelique Coetzee is given credit by mainstream media for “discovering” the Omicron variant. She told [Pfizer-controlled Reuters](#) on November 18 that Omicron patients have “[very, very mild symptoms](#)” including fatigue and body aches. Coetzee expanded on this explanation in a [November 27 interview with The Times of India](#):

“It presents mild disease with symptoms being sore muscles and tiredness for a day or two not feeling well. So far, we have detected that those infected do not suffer loss of taste or smell. They may have a slight cough.”

In other words, the symptoms are similar to how your body feels after two hours at the gym or when human beings suffer what’s known as a common cold.

Coetzee wrote a column for The Daily Mail on November 29. She’s only concerned about the U.K. travel restrictions to South Africa despite [The United States](#), [European Union](#) and a few Asian countries also enacting travel restrictions to and from South Africa. Regardless, here is [the crux of her column](#):

“And let me be clear: nothing I have seen about this new variant warrants the extreme action the UK government has taken in response to it. No one in South Africa is known to have been hospitalised with the Omicron variant, nor is any South African believed to have fallen seriously ill with it.”

South Africa **President Cyril Ramaphosa** called all the travel prohibitions “unjustified.” He said the restrictions will only damage the economies of the affected countries.

But Ramaphosa is a COVID-19 puppet. He said [back in February](#) that nobody will be forced to take the injections in South Africa. But now he’s [considering vaxx mandates](#) because of the new “mild disease.”

Omicron is now present in 38 countries, according to the World Health Organization. But the U.S. is only restricting travel to and from South Africa and countries that border it. Ironically, [CNBC reported](#) that the first U.S. Omicron case was a fully vaccinated traveler coming back to San Francisco from South Africa. Omicron is also [spreading in Australia now](#). But non-vaccinated people are neither allowed to leave Australia nor enter Australia. So the public is supposed to believe that Omicron magically appeared out of nowhere down under.

Conjured fear of Africa and Africans to coerce “vaccination”

Strange headlines from mainstream media are the norm in 2021. But the propaganda is

completely obvious to anyone with common sense. Just days before Omicron premiered, several mainstream media outlets published articles about scientists being “mystified” and “baffled” because COVID is virtually nonexistent across Africa. The Continent has very low vaccination rates (less than 6%) and no COVID. That damages the propaganda narratives.

Now just days after the foregoing “mystified” campaign, Omicron is the new global fearmongering trend despite so-called Omicron being brought to southern Africa by fully vaccinated European travelers.

The fact remains that COVID-19 is a media-driven “pandemic.” As has been stated repeatedly on this blog, just turn off the TV and get off Facebook; and the pandemic ends. For instance, only 8.7% of Zimbabwe citizens [use social media](#). In contrast, [74% of American adults](#) use social media. The powers-that-be can literally create anything they want because of mass obedience. Only 19% of Zimbabwe is fully vaccinated versus 58% of the United States (depending on which stats you believe).

Bill Gates, in early November, essentially admitted that [smallpox is going to be re-released into the world](#) despite being [officially eradicated since 1980](#). Coincidentally or otherwise, the U.S. Food and Drug Administration (FDA) [approved an anti-viral drug called brincidofovir](#) (trade name Tembexa) to treat smallpox this past June. Chimerix Inc. is the [bio-tech company that manufactures the drug](#). Gates has given [at least \\$5.7 million](#) to Chimerix since 2014. In other words, expect smallpox to reemerge in the near future.

Some bloggers have speculated that Omicron will be used as the excuse for all the heart attacks and other cardiac issues caused by the mRNA and viral vector DNA injections.

Politifact and other mainstream media “fact checkers” [dismissed this idea as conspiracy theory](#). Thus there is some truth to the foregoing hypothesis.

Much ado about nothing

Just a few months ago, the so-called Delta variant was supposed to kill us all. The desired fear level was not accomplished by Fauci, Biden and mainstream media. So they conjured an “African” variant that they hope will evoke the desired fear that Delta wasn’t able to garner. Former South Africa Opposition and Democratic Alliance Leader Mmusi Maimane pointed out the racial fear elements. He tweeted a political cartoon yesterday depicting Omicron as African immigrants coming into the European Union.

It seems the idea now is to trigger images of Ebola, malaria and other “African” illnesses in Western populations to scare them into three, four and five booster shots.

The only people running to get vaxxed or boosted due to Omicron are those who were/are already under the COVID-19 spell. Of course there are also millions of unfortunate souls succumbing to societal pressure and getting injected to travel or keep their jobs. But Omicron is just the latest fearmongering propaganda to achieve the goal of modifying all

human genes. Let's just hope the total number of COVID-19 variants exceeds 24 so they are forced to use "Xi variant" at some point. At least we'll get a chuckle through all this craziness.

Stay vigilant and protect your friends and loved ones.
