

Overcoming the Robotic Mind - Why Humanity Must Come Through

A Review of the Latest Book by Julian Rose

By [R. Teichmann](#)

Global Research, July 17, 2019

Theme: [Environment](#), [Police State & Civil Rights](#)

*When I read the latest book of **Julian Rose's** 'Overcoming the Robotic Mind - Why Humanity Must Come Through' I was touched by the uncompromising analysis of how earth and all life on it is under threat. Even more so by his dedication to find ways to overcome our ever faster slide into a dystopian future where the robotic mind, artificial intelligence and the internet of things will dominate and enslave humanity and all life.*

Julian shows how interconnected things are. One cannot separate our health from the effects of the electronic communication gadgets which steal more and more of our real lives. Nor can one separate the effects of genetic manipulation from the depletion of the world's soils. Nor can one separate the poisoning of the environment from the cut-throat non-morality of the dominant economic system. Nor can one separate politics and economy from an agenda that is hell-bent on merging the human brain with the 'internet of things' to finally enable total global control of the minds and lock humanity in a permanent and invisible prison.

In his book Julian touches on many things such as politics, agriculture, genetics, trans-humanism, war, technology, de-population, religion and spirituality. In the form of essays he fuses them all together to enable the reader to see the bigger picture and the dire situation all life - including human - finds itself in. But he does not stop there but inspires us to remember our own powers and responsibilities and gives us ideas of how we can overcome it. He makes us aware that our acquiescence to go along with what is happening in our societies is a major part of why we find ourselves in such a situation. He reminds us of the power of 'NO', meaning having enough of the madness and the will to NOT go along with it any longer. In his words: 'That first big No leads directly to an even bigger Yes! To living our true nature as conscious beings; defenders and guardians of this richly endowed place of beauty in which we find ourselves. You see there is nowhere else to go with our lives. Those of us who 'understand' are in the last line of defence to bring to an end the despotic rape of all that which has value. Of everything sacred.'

So what alternatives do we have? Julian suggests that we return, by necessity, to our roots and that all those who can read the writing on the wall, should set their sights on getting re-earthed before the fault lines of change finally swallow up the outmoded and dysfunctional practices of yesteryear.

This book is a strong call to action for everyone who cares for the beauty of this planet and the life on it including the human. It is a battle cry for humanity and the sacredness of creation.
