“Perhaps this speech of mine may be a bit blasphemous, but I ask myself: is there no form of compensation for those who suffer health damage after getting the vaccine? I state that I am not anti-vax but I have never been convinced of making this vaccine and I have had confirmation. I don't know if you are interested but I have had and still have post vaccine pericarditis. Who pays the price for all this? Have a good evening.”

Nov. 2021 - 29-year old professional mountain bike racer Kyle Warner developed pericarditis & other injuries after second Pfizer mRNA jab. ([click here](#))

Professional Mountain Bike Racer Describes Life-Altering Vaccine Injuries After Second Pfizer COVID Shot

Kyle Warner, a 29-year-old professional mountain bike racer, developed [pericarditis](#), POTS and reactive arthritis following his second dose of Pfizer's COVID shot.

Story at-a-glance:

- Kyle Warner, a 29-year-old professional mountain bike racer, developed [pericarditis](#), POTS and reactive arthritis following his second dose of Pfizer's COVID-19 shot.
- About two weeks after the shot, Warner experienced extremely elevated heart rates; an ER doctor refused to believe it was an adverse reaction to the jab and instead blamed it on a "psychotic episode."
- After visiting another hospital due to more heart trouble, Warner was referred to a cardiologist who diagnosed him with pericarditis, an inflammation of the outer lining of the heart.
- For four months now, Warner has been so ill that he hasn't been able to work or ride a bike — even mental exertion can cause him to relapse physically.
- At the Real, Not Rare rally held in Washington, D.C., Warner spoke before politicians to make a difference in the support level for vaccine-injured people — which is nonexistent in the U.S. — and voice opposition to vaccine mandates. "I believe where there is risk, there needs to be choice," he said

Kyle Warner is 29 years old and was at the peak of his career as a professional mountain bike racer when, in June, he got his second dose of [Pfizer's COVID-19](#) shot. He suffered a reaction so severe that, as of October, he was still spending days in bed, easily overwhelmed by too

Dec. 2021 – 33-year old C.M. Boling was injured after her third Pfizer jab, with pericarditis which left her on bed rest for seven months & in wheelchair

C. M. Boling @dogvoyages · Jul 26, 2022
 #vaccineinjury success! After SEVEN MONTHS of bed rest and severe disability, I'm finally feeling well enough to take our van, Sophie, out for her maiden voyage. I'm not fully recovered yet but have improved so much ❤️

C. M. Boling @dogvoyages · Jul 23, 2022
 THIS.
 I haven't been able to stand up for more than a minute in seven months and still don't have a diagnosis.

C. M. Boling @dogvoyages · Jul 24, 2022
 221 days of needing to use a shower chair to shower, a wheelchair to get around the house, and a mobility scooter in public. I'm 33 years old and my symptoms started the day after my third dose of the "safe and effective" Pfizer vaccine.
 #VaccineSideEffects
 #vaccineinjuries

C. M. Boling @dogvoyages · Mar 15, 2022
 3 months post #Pfizer booster. Constant chest pain and exercise intolerance for three months. EKG today was again abnormal after leveling off about a month ago. Inflammation is repeatedly spreading to my heart. Myo/pericarditis is not a mild condition. #VaccineSideEffects

Dec. 31, 2021 - 18-year old Runa Cody, an Italian boy who was studying in the UK, died suddenly on Dec. 31, 2021 from pericarditis one month after second COVID-19 vaccine. ([click here](#))

Andrea
Zambrano

The battle of Doina, mother courage who asks for truth for the death of her 18-year-old son, Runa Cody: « **The autopsy revealed a fatal pericarditis, had made the vaccine just a month earlier** ». But the Civitavecchia gip filed the report for manslaughter because at the time there was not enough scientific literature. But that's not true: « The cases were known as early as June 2021 ». « I will go all the way, I want to have the heart we have kept analyzed ».

"It should also be stressed that at the time of administration and also at present, the scientific literature on the subject was extremely scarce or absent, and that the pandemic situation was of absolute gravity. So, the responsibility of anyone on the subjective level would not be conceivable". This disconcerting sentence is found in the sentence with which the judge for the preliminary investigations of Civitavecchia Paola Petti rejects the opposition to the request to close the report for manslaughter against unknown persons on the case by **Runa Cody, who died at 18 years of age from fulminant perimycarditis one month after covid vaccination.**

The sentence bears the date of March 23, but was made known in recent days by the young man's mother, Doina Marchetti, who for more than a year and a half has been fighting to obtain the truth about the unexpected death of her son.

Disconcerting, because the medical literature available on post-vaccine myocarditis not only is it ascertained "currently", but it was also "at the time of administration" of the Pfizer vaccine made by the boy in England in September and November 2021.

Jan. 2022 – Toronto lawyer Adam Goodman had pericarditis and cardiac tamponade after second dose of Pfizer but insisted on getting a booster ([click here](#))

I was hospitalized because of a COVID-19 vaccine side effect, but that didn't stop me from getting a booster

ADAM GOODMAN

CONTRIBUTED TO THE GLOBE AND MAIL

PUBLISHED JANUARY 10, 2022

UPDATED JANUARY 11, 2022

Adam Goodman is a lawyer in Toronto.

After receiving my second dose of Pfizer, I developed what I thought was muscle pain that started in my neck and spread to my chest. After consulting with my personal doctor, I learned that I had developed one of the two potential significant side effects associated with the mRNA vaccines – pericarditis, an inflammation of the lining that surrounds the heart. The other side effect, myocarditis, is an inflammation of the heart itself. Other typical side effects associated with viral-vector vaccines include syndromes causing blood clots.

Because I thought I was experiencing muscle pain, I let the pericarditis go too long without treatment. As a result, I experienced a dangerous squeezing of the heart called tamponade. I spent five days in hospital recovering with the help of a crack team of cardiologists, nurses and pharmacists at Toronto's University Health Network and a heavy dose of anti-inflammatory drugs.

Furthermore, I accept my role as collateral damage of the vaccine rollout. Before the current Omicron wave, vaccines helped us get back to some degree of normality. They protect society and our public-health system. Previous generations were asked to undertake far greater risks for the protection of society, including being drafted for war. The vaccines are our civic duty.

Feb. 2022 - BC Musician "Nate Timesamillion" developed pericarditis three days after his COVID-19 mRNA booster shot & was hospitalized

Nate Timesamillion @times... · 3d ...
 Time for my 3rd dose! Get boosted, baby! #GetVaccinated

Nate Timesamillion @times... · 7h ...
 Hello friends. Last night I went to the ER with fever, chest pains and shortness of breath. I have Pericarditis, a swelling of the tissue surrounding the heart. The doctor says this may be a reaction to the mRNA booster I received on Saturday. I'm doing fine today, resting up.

March 2022 – 27-year old Australian 1500m record holder Stewart McSweyn was dramatically pulled out of a 5000m race and was diagnosed with pericarditis ([click here](#))

LdogExtreme @LdogExtreme

Aus Olympic Middle distance champion Stewart McSweyn has developed pericarditis after receiving the COVID-19 booster. McSweyn, unable to finish a 5000-meter race in Melb on Tues, prompting doctors to warn him against going to Serbia for the World Athletics Indoors Championships.

Stewart McSweyn: Australian Olympic Athlete Develops Pericarditis After

Australia's 1500m record holder was dramatically pulled from a race in March and later diagnosed with pericarditis - inflammation around the heart - in an adverse reaction to the Covid booster shot, which his team said he administered too quickly after having the virus itself.

Speaking exclusively to NCA NewsWire following a stunning return to form on Friday, the Tokyo 1500m finalist opened up about the prospect of never returning to his record-running best.

"Eugene and Commonwealth Games in Birmingham are coming up pretty quick, so I wasn't sure whether I'd be back this season, whether I was going to be at the level I want to perform the following season, whether I would maybe even get back to my best at all," the 27-year-old said.

Obviously as you know, I'm trying to be as transparent as I can and now is more important than ever.

On December 22 I got my booster vaccination because I didn't want to struggle with this when the season started. I was told that it was safer to get Pfizer (even though I had Moderna the first time) to avoid cardiac side effects.

On December 27 I felt a tightness in the chest and started feeling dizzy while walking up the stairs. This happened a few more times until I decided to check with a cardiologist who diagnosed me with pericarditis (inflammation of the thin membrane surrounding the heart).

I am now not allowed to get my heart rate up for a few weeks to allow my heart to rest and heal from the inflammation. I am still doing everything I can with my coach to keep my muscles moving and he's doing a GREAT job, thank you @patsaile !!

I have to admit that I am upset at the situation because we don't talk enough about the side effects. I feel helpless since this is completely out of my control...

I am glad the vaccine helped avoid many deaths and reduce the pressure on the hospitals and hospital staff however I am frustrated that myself as well as other young and healthy people are suffering from these heavy side effects.

I hope you understand why it is important for me to share, I'll keep you guys updated on the process 🙏

let me know if you're experiencing the same, let's help each other!

 @harvey.4h

March 20, 2023 – Japan – 14-year old girl Japanese girl died suddenly two days after third Pfizer COVID-19 mRNA vaccine dose. Cause of death: myopericarditis ([click here](#))

A case of fatal multi-organ inflammation following COVID-19 vaccination

Abstract

[Go to:](#) ▶

A 14-year-old Japanese girl died unexpectedly 2 days after receiving the third dose of the BNT1262b2 mRNA COVID-19 vaccine. Autopsy findings showed congestive edema of the lungs, T-cell lymphocytic and macrophage infiltration in the lungs, pericardium, and myocardium of the left atria and left ventricle, liver, kidneys, stomach, duodenum, bladder, and diaphragm. Since there was no preceding infection, allergy, or drug toxicity exposure, the patient was diagnosed with post-vaccination pneumonia, myopericarditis, hepatitis, nephritis, gastroenteritis, cystitis, and myositis. Although neither type of inflammation is fatal by itself, **arrhythmia is reported to be the most common cause of death in patients with atrial myopericarditis. In the present case, arrhythmia of atrial origin was assumed as the cause of cardiac failure and death.** In sudden post-vaccination deaths, aggressive autopsy systemic search and histological examination involving extensive sectioning of the heart, including the atrium, are indispensable.

March 2023 - British Columbia - In his 20s, Ayden Thane, a basketball player, developed pericarditis after COVID-19 vaccine in Sep. 2021. He has not recovered. ([click here](#))

Ayden Thane

Breanna Thane is organizing this fundraiser on behalf of Courtney Thane.

Hi, My name is Breanna Thane and I am starting this GoFundMe to help my little brother Ayden Thane. Ayden was diagnosed with **Myopericarditis and cellular/nerve damage caused by his covid-19 vaccine back in Sept 2021. He is one of the unfortunate ones who's pain and symptoms are not going away, and keep getting worse.** Over the last 19 months, we have tried everything we can to figure out what is going on in his body to help him get better, but nothing has worked. Medications, countless supplements, IV treatments,

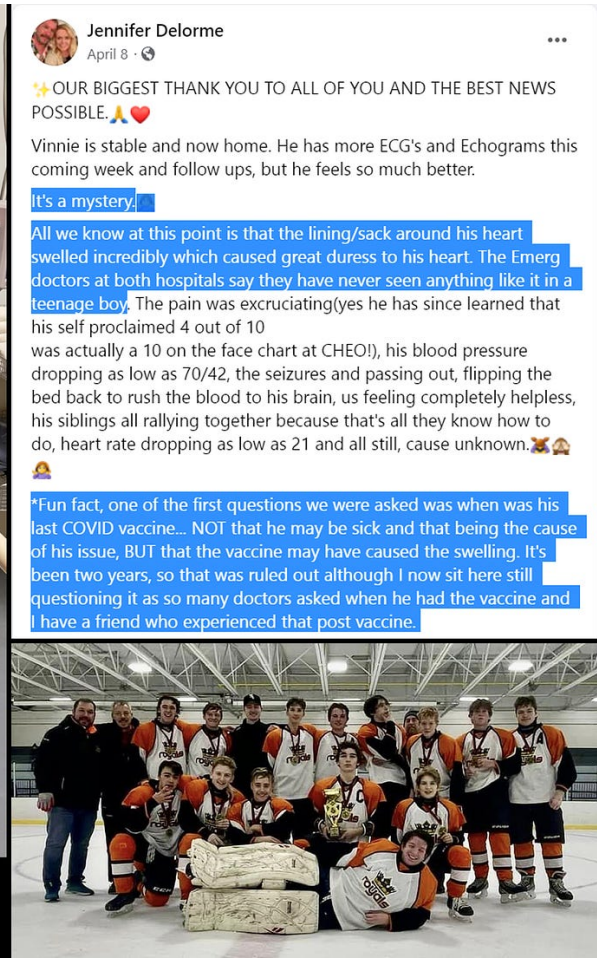

Ayden Thane is with Courtney Thane in Las Vegas, NV, United States. ...
 March 2 · 🌐

Very grateful that after 19 months of hell and excruciating pain, I am able to get another opportunity at healing with this new treatment. I have not shared my story because of how bad my condition has been, but I will be sharing it once I am healed. As of now I am still focused on healing and will continue to push through at a chance of getting back to loving my life.

April 2023 - Kemptville, ON - 17-year old hockey player for the U18 Kemptville Royals, Vinnie Delorme had COVID-19 vaccines in 2021 & got pericarditis in Apr. 2023 ([click here](#))

My Take...

Pericarditis is an inflammation of the pericardium, which is a thin, protective membrane surrounding the heart.

Myocarditis (inflammation of the heart muscle) is very common after COVID-19 mRNA vaccination, as common as 1:30 per one mRNA dose. One study suggests post COVID-19 vaccine myocarditis is 2.5 times as common as pericarditis ([click here](#)).

WHO's VigiAccess database lists 28,328 reports of myocarditis and 23,173 reports of pericarditis for ALL COVID-19 vaccines ([click here](#))

Here are some key points:

- COVID-19 vaccine pericarditis affects young men and young women;
- Pericarditis is slightly less common than myocarditis;
- Pericarditis can result in long term permanent disability;
- Those who suffer long term due to pericarditis can't find treatments;

- Pericarditis can also be fatal, as happened in 2 cases here: a 14 year old Japanese girl and an 18 year old Italian boy studying in the UK.

The Worldwide Corona Crisis, Global Coup d'Etat Against Humanity

by Michel Chossudovsky

Michel Chossudovsky reviews in detail how this insidious project “destroys people’s lives”. He provides a comprehensive analysis of everything you need to know about the “pandemic” — from the medical dimensions to the economic and social repercussions, political underpinnings, and mental and psychological impacts.

“My objective as an author is to inform people worldwide and refute the official narrative which has been used as a justification to destabilize the economic and social fabric of entire countries, followed by the imposition of the “deadly” COVID-19 “vaccine”. This crisis affects humanity in its entirety: almost 8 billion people. We stand in solidarity with our fellow human beings and our children worldwide. Truth is a powerful instrument.”
